B. C. 394-384.—Conquests and dominion of Dionysius. See Syracuse: B. C. 394–384.

B. C. 383.—War with Carthage.—Dionysius, the Syracusan despot, was the aggressor in a fresh war with Carthage which broke out in 383, B. C. The theatre of war extended from Sicily to southern Italy, where Dionysius had made considerable conquests, but only two battles of serious magnitude were fought—both in Sicily. Dionysius was the victor in the first of these, which was a desperate and sanguinary struggle, at a place called Kabala. The Carthaginian commander, Magon, was slain, with 10,000 of his troops, while 5,000 were made captive. The survivors begged for peace and Dionysius dictated, as a first condition, the entire withdrawal of their forces from Sicily. While negotiations were in progress, Magon's young son, succeeding to his father's command, so reorganized and reinspirited his army as to be able to attack the Syracusans and defeat them with more terrific slaughter than his own side had experienced a few days before. This battle, fought at Kronium, reversed the situation, and forced Dionysius to purchase a humiliating peace at heavy cost.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 83.

B. C. 133-103.—Slave wars. See SLAVE WARS IN SICILY.

A. D. 429-525.—Under the Vandals, and the Goths.—"Sicily, which had been for a generation subjected, first to the devastations and then to the rule of the Vandal king [in Africa], was now by a formal treaty, which must have been nearly the last public act of Gaiseric [or Genseric, who died A. D. 477] ceded to Odovacar [or Odoacer, who extinguished the Western Roman Empire and was the first barbarian king of Italy], all but a small part, probably at the western end of the island, which the Vandal reserved to himself. A yearly tribute was to be the price of this concession; but, in the decay of the kingdom under Gaiseric's successors, it is possible that this tribute was not rigorously enforced, as it is also almost certain that the reserved portion of the island, following the example of the remainder, owned the sway of Odovacar."—T. Hodgkin, *Italy and Her Invaders, bk.* 4, *ch.* 4.—Under Theodoric the Ostrogoth, who overthrew Odoacer and reigned in Italy from 493 until 525, Sicily was free both from invasion and from tribute and shared with Italy the benefits and the trials of the Gothic supremacy.—Same, *bk.* 4, *ch.* 9.

A. D. 535.—Recovered by Belisarius for the Emperor Justinian. See ROME: A. D. 535-553.

A. D. 550.—Gothic invasion. See ROME: A. D. 535-553.

A. D. 827-878.—Conquest by the Saracens.—The conquest of Sicily from the Byzantine empire, by the Saracens, was instigated in the first instance and aided by an influential Syracusan named Euphemios, whom the Emperor Michael had undertaken to punish for abduction of a nun. Euphemios invited the African Saracens to the island, and Ziadet Allah, the Aglabite sovereign who had established himself in power at Cairowan or Kairwan, felt strong enough to improve the opportunity. In June 827 the admiral of the Moslems formed a junction with the ships which Euphemios had set afloat, and the Saracens landed at Mazara. The Byzantines were defeated in a battle near Platana and the Saracens occupied Girgenti. Having gained this foothold they waited some time for reinforcements, which came, at last, in a naval armament from Spain and troops from Africa. "The war was then carried on with activity: Messina was taken in 831; Palermo capitulated in the following year; and Enna was besieged, for the first time, in 836. The war continued with various success, as the invaders received assistance from Africa, and the Christians from Constantinople. The Byzantine forces recovered possession of Messina, which was not permanently occupied by the Saracens until 843. . . . At length, in the year 859, Enna was taken by the Saracens. Syracuse, in order to preserve its commerce from ruin, had purchased peace by paying a tribute of 50,000 byzants; and it was not until the reign of Basil I., in the year 878, that it was compelled to surrender, and the conquest of Sicily was completed by the Arabs. Some districts, however, continued, either by treaty or by force of arms, to preserve their municipal independence, and the exclusive exercise of the Christian religion, within their territory, to a later period."—G. Finlay, *Hist. of the Byzantine Empire, from* 716 *to* 1057, *bk.* 1, *ch.* 3, *sect.* 1.—"Syracuse preserved about fifty years [after the landing of the Saracens in Sicily] the faith which she had sworn to Christ and to Cæsar. In the last and fatal siege her citizens displayed some remnant of the spirit which had formerly resisted the powers of Athens and Carthage. They stood above twenty days against the battering-rams and catapultæ, the mines and tortoises of the besiegers; and the place might have been relieved, if the mariners of the imperial fleet had not been detained at Constantinople in building a church to the Virgin Mary. . . . In Sicily the religion and language of the Greeks were eradicated; and such was the docility of the rising generation that 15,000 boys were circumcised and clothed on the same day with the son of the Fatimite caliph. The Arabian squadrons issued from the harbours of Palermo, Biserta, and Tunis; a hundred and fifty towns of Calabria and Campania were attacked and pillaged; nor could the suburbs of Rome be defended by the name of the Cæsars and apostles. Had the Mahometans been united, Italy must have fallen an easy and glorious accession to the empire of the prophet."—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 52.—A hundred and fifty years after the fall of Syracuse Basil II. undertook its recovery, but death overcame him in the midst of his plans. "Ten years later, the Byzantine general Maniakes commenced the reconquest of Sicily in a manner worthy of Basil himself, but the women and eunuchs who ruled at Constantinople procured his recall; affairs fell into confusion, and the prize was eventually snatched from both parties by the Normans of Apulia."—E. A. Freeman, *Hist. and Conquests of the Saracens, lect.* 5.

SICULI, The. See SICILY: THE EARLY INHABITANTS.

SICYON, OR SIKYON.—"Sicyon was the starting point of the Ionic civilization which pervaded the whole valley of the Asopus [a river which flows from the mountains of Argolis to the Gulf of Corinth, in northeastern Peloponnesus]; the long series of kings of Sicyon testifies to the high age with which the city was credited. At one time it was the capital of all Asopia as well as of the shore in front of it, and the myth of Adrastus has preserved the memory of this the historic glory of Sicyon. The Dorian immigration dissolved the political connection between the cities of the Asopus. Sicyon itself had to admit Dorian families." The ascendancy which the Dorian invaders then assumed was lost at a later time. The old Ionian population of the country, dwelling on the shores of the Corinthian gulf, engaged in commerce and fishing, acquired superior wealth and were trained to superior enterprise by their occupation. In time they overthrew the Doric state, under the lead of a family, the Orthagoridæ, which established a famous tyranny in Sicyon (about 670 B. C.). Myron and Clisthenes, the first two tyrants of the house, acquired a great name in Greece by their wealth, by their liberal encouragement of art and by their devotion to the sanctuaries at Olympus and at Delphi.—E. Curtius, *Hist. of Greece, bk.* 2, *ch.* 1 (*v.* 1).—See, also, TYRANTS, GREEK.

SIDON, The suicidal burning of.—About 346 B. C., Ochus, king of Persia, having subdued a revolt in Cyprus, proceeded against the Phœnician cities, which had joined in it. Sidon was betrayed to him by its prince, and he intimated his intention to take signal revenge on the city; whereupon the Sidonians "took the desperate resolution, first of burning their fleet that no one might escape—next, of shutting themselves up with their families, and setting fire each man to his own house. In this deplorable conflagration 40,000 persons are said to have perished; and such was the wealth destroyed, that the privilege of searching the ruins was purchased for a large sum of money."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 90.

SIEBENBÜRGEN.—The early name given to the principality of Transylvania, and having reference to seven forts erected within it.—J. Samuelson, *Roumania, p.* 182.

SIENA: The mediæval factions.—"The way in which this city conducted its government for a long course of years [in the Middle Ages] justified Varchi in calling it 'a jumble, so to speak, and chaos of republics, rather than a well-ordered and disciplined commonwealth.' The discords of Siena were wholly internal. They proceeded from the wrangling of five factions, or Monti, as the people of Siena called them. The first of these was termed the Monte de' Nobili; for Siena had originally been controlled by certain noble families. . . . The nobles split into parties among themselves. . . . At last they found it impossible to conduct the government, and agreed to relinquish it for a season to nine plebeian families chosen from among the richest and most influential. This gave rise to the Monte de' Nove. . . . In time, however, their insolence became insufferable. The populace rebelled, deposed the Nove, and invested with supreme authority 12 other families of plebeian origin. The Monte de' Dodici, created after this fashion, ran nearly the same course as their predecessors, except that they appear to have administered the city equitably. Getting tired of this form of government, the people next superseded them by 16 men chosen from the dregs of the plebeians, who assumed the title of Riformatori. This new Monte de' Sedici or de' Riformatori showed much integrity in their management of affairs, but, as is the wont of red republicans, they were not averse to bloodshed. Their cruelty caused the people, with the help of the surviving patrician houses, together with the Nove and the Dodici, to rise and shake them off. The last governing body formed in this diabolical five-part fugue of crazy statecraft received the name of Monte del Popolo, because it included all who were eligible to the Great Council of the State. Yet the factions of the elder Monti still survived; and to what extent they had absorbed the population may be gathered from the fact that, on the defeat of the Riformatori, 4,500 of the Sienese were exiled. It must be borne in mind that with the creation of each new Monte a new party formed itself in the city, and the traditions of these parties were handed down from generation to generation. At last, in the beginning of the 16th century, Pandolfo Petrucci, who belonged to the Monte de' Nove, made himself in reality, if not in name, the master of Siena, and the Duke of Florence later on in the same century [1557] extended his dominion over the republic."—J. A. Symonds, *Renaissance in Italy: The Age of the Despots, ch.* 3.

SIERRA LEONE.—"During the war of the [American] Revolution a large number of blacks, chiefly runaway slaves, ranged themselves under the British banner. At the close of the war a large number of these betook themselves to Nova Scotia with the view of making that their future home; while others followed the army, to which they had been attached, to London. It was soon ascertained that the climate of Nova Scotia was too severe for those who had gone there; and those who followed the army to London, when that was disbanded, found themselves in a strange land, without friends and without the means of subsistence. In a short time they were reduced to the most abject want and poverty; and it was in view of their pitiable condition that Dr. Smeathman and Granville Sharp brought forward the plan of colonizing them on the coast of Africa. They were aided in this measure by the Government. The first expedition left England in 1787, and consisted of 400 blacks and about 60 whites, most of whom were women of the most debased character. . . . On their arrival at Sierra Leone a tract of land of 20 miles square was purchased from the natives of the country, and they immediately commenced a settlement along the banks of the river. In less than a year their number was reduced more than one half, owing, in some measure, to the unhealthiness of the climate, but more perhaps to their own irregularities. Two years afterward they were attacked by a combination of natives, and had nigh been exterminated. About this time the 'Sierra Leone Company' was formed to take charge of the enterprise. Among its directors were enrolled the venerable names of Wilberforce, Clarkson, Thornton, and Granville Sharp. The first agent sent out by the Company to look after this infant colony found the number of settlers reduced to about 60. In 1791 upward of 1,100 colored emigrants were taken from Nova Scotia to Sierra Leone. About the same time as many as a hundred whites embarked in England for the same place. . . . In 1798 it is said that Free-town had attained to the dimensions of a full-grown town. . . . About the same time the colony was farther reinforced by the arrival of more than 500 Maroons from the Island of Jamaica. These Maroons were no better in character than the original founders of the colony, and no little disorder arose from mixing up such discordant elements. These were the only emigrations of any consequence that ever joined the colony of Sierra Leone from the Western hemisphere. Its future accessions . . . came from a different quarter. In 1807 the slave-trade was declared piracy by the British Government, and a squadron was stationed on the coast for the purpose of suppressing it. About the same time the colony of Sierra Leone was transferred to the Government, and has ever since been regarded as a Crown colony. The slaves taken by the British cruisers on the high seas have always been taken to this colony and discharged there; and this has been the main source of its increase of population from that time."—J. L. Wilson, *Western Africa, pt. 4, ch. 2.*

SIKHS, The.—"The founder of the Sikh religion was Nanak [or Nanuk], son of a petty Hindu trader named Kalu. Nanak was born in the vicinity of Lahor in the year 1469. A youth much given to reflection, he devoted himself at an early period of his life to a study of the rival creeds then prevailing in India, the Hindu and the Muhammadan. Neither satisfied him. . . . After wandering through many lands in search of a satisfying truth, Nanak returned to his native country with the conviction that he had failed. He had found, he said, many scriptures and many creeds; but he had not found God. Casting off his habit of an ascetic, he resumed his father's trade, married, became the father of a family, and passed the remainder of his life in preaching the doctrine of the unity of one invisible God, of the necessity of living virtuously, and of practising toleration towards others. He died in 1539, leaving behind him a reputation without spot, and many zealous and admiring disciples eager to perpetuate his creed. The founder of a new religion, Nanak, before his death, had nominated his successor — a man of his own tribe named Angad. Angad held the supremacy for twelve years, years which he employed mainly in committing to writing the doctrines of his great master and in enforcing them upon his disciples. Angad was succeeded by Ummar Das, a great preacher. He, and his son-in-law and successor, Ram Das, were held in high esteem by the emperor Akbar. But it was the son of Ram Das, Arjun, who established on a permanent basis the new religion. . . . He fixed the seat of the chief Guru, or high priest of the religion, and of his principal followers, at Amritsar, then an obscure hamlet, but which, in consequence of the selection, speedily rose into im-

portance. Arjun then regulated and reduced to a systematic tax the offerings of his adherents, to be found even then in every city and village in the Panjab and the cis-satlaj territories. . . . The real successor of Arjun was his son, Hur Govind. Hur Govind founded the Sikh nation. Before his time the followers of the Guru had been united by no tie but that of obedience to the book. Govind formed them into a community of warriors. He did away with many of the restrictions regarding food, authorised his followers to eat flesh, summoned them to his standard, and marched with them to consolidate his power. A military organisation based upon a religious principle, and directed by a strong central authority, will always become powerful in a country the government of which is tainted with decay. The ties which bound the Mughul empire together were already loosening under the paralysing influence of the bigotry of Aurangzile, when, in 1675, Govind, fourth in succession to the Hur Govind to whom I have adverted, assumed the mantle of Guru of the Sikhs. . . . Govind still further simplified the dogmas of the faith. Assembling his followers, he announced to them that thenceforward the doctrines of the 'Khalsa,' the saved or liberated, alone should prevail. There must be no human image or resemblance of the One Almighty Father; caste must cease to exist; before Him all men were equal; Muhammadanism was to be rooted out; social distinctions, all the solaces of superstition, were to exist no more; they should call themselves 'Singh' and become a nation of soldiers. The multitude received Govind's propositions with rapture. By a wave of the hand he found himself the trusted leader of a confederacy of warriors in a nation whose institutions were decaying. About 1695, twelve years before the death of Aurangzile, Govind put his schemes into practice. He secured many forts in the hill-country of the Panjab, defeated the Mughul troops in several encounters, and established himself as a thorn in the side of the empire." But more than half a century of struggle with Moghul, Afghan and Mahratta disputants was endured before the Sikhs became masters of the Panjab. When they had made their possession secure, they were no longer united. They were "divided into 12 confederacies or misls, each of which had its chief equal in authority to his brother chiefs, . . . and it was not until 1784 that a young chieftain named Maha Singh gained, mainly by force of arms, a position which placed him above his fellows." The son of Maha Singh was Ranjit Singh, or Runjet Singh, who established his sovereignty upon a solid footing, made terms with his English neighbors (see INDIA: A. D. 1805–1816), and extended his dominions by the capture of Multan in 1818, by the conquest of Kashmere in 1819–20, and by the acquisition of Peshawar in 1823.—G. B. Malleson, *The Decisive Battles of India, ch.* 11.—The wars of the Sikhs with the English, in 1845–6, and 1848–9, the conquest and annexation of their country to British India, and the after-career in exile of Dhuleep Singh, the heir, are related under INDIA: A. D. 1845–1849, and 1849–1893.

SIRIS.—SIRITIS.—THURII.—METAPONTIUM.—TARENTUM.—"Between the point [on the Tarentine gulf, southeastern Italy] where the dominion of Sybaris terminated on the Tarentine side, and Tarentum itself, there were two considerable Grecian settlements—Siris, afterwards called Herakleia, and Metapontium. The fertility and attraction of the territory of Siris, with its two rivers, Akiris and Siris, were well-known even to the poet Archilochus (660 B. C.), but we do not know the date at which it passed from the indigenous Chonians, or Chaonians into the hands of Greek settlers. . . . At the time of the invasion of Greece by Xerxes, the fertile territory of Siritis was considered as still open to be colonised; for the Athenians, when their affairs appeared desperate, had this scheme of emigration in reserve as a possible resource. . . . At length, after the town of Thurii had been founded by Athens [B. C. 443, under the administration of Perikles; the historian Herodotus and the orator Lycias being among the settlers], in the vicinity of the dismantled Sybaris, the Thurians tried to possess themselves of the Siritid territory, but were opposed by the Tarentines. According to the compromise concluded between them, Tarentum was recognised as the metropolis of the colony, but joint possession was allowed both to Tarentines and Thurians. The former transferred the site of the city, under the new name Herakleia, to a spot three miles from the sea, leaving Siris as the place of maritime access to it. About twenty-five miles eastward of Siris, on the coast of the Tarentine gulf, was situated Metapontium, a Greek town, . . . planted on the territory of the Chonians, or Œnotrians; but the first colony is said to have been destroyed by an attack of the Samnites, at what period we do not know. It had been founded by some Achæan settlers. . . . The fertility of the Metapontine territory was hardly less celebrated than that of the Siritid. Farther eastward of Metapontium, again at the distance of about twenty-five miles, was situated the great city of Taras, or Tarentum, a colony from Sparta founded after the first Messenian war, seemingly about 707 B. C. . . . The Tarentines . . . stand first among the Italiots, or Italian Greeks, from the year 400 B. C. down to the supremacy of the Romans."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22.

SLAVE: Origin of the servile signification of the word.—The term slave, in its signification of a servile state, is derived undoubtedly from the name of the Slavic or Sclavic people. "This conversion of a national into an appellative name appears to have arisen in the eighth century, in the Oriental France [Austrasia], where the princes and bishops were rich in Sclavonian captives, not of the Bohemian (exclaims Jordan), but of Sorabian race. From thence the word was extended to general use, to the modern languages, and even to the style of the last Byzantines."—E. SLAVE WARS IN SICILY AND ITALY.—After the Romans became masters of Sicily the island was filled rapidly with slaves, of which a vast number were being continually acquired in the Roman wars of conquest. Most of these slaves were employed as shepherds and herdsmen on great estates, the owners of which gave little attention to them, simply exacting in the most merciless fashion a satisfactory product. The result was that the latter, half perishing from hunger and cold, were driven to desperation, and a frightful rising among them broke out, B. C. 133. It began at Enna, and its leader was a Syrian called Eunus, who pretended to supernatural powers. The inhabitants of Enna were massacred, and that town became the stronghold of the revolt. Eunus crowned himself and assumed the royal name of Antiochus. Agrigentum, Messana and Tauromenium fell into the hands of the insurgents, and more than a year passed before they were successfully resisted. When, at last, they were overcome, it was only at the end of most obstinate sieges, particularly at Tauromenium and Enna, and the vengeance taken was without mercy. In Italy there were similar risings at the same time, from like causes, but these latter were quickly suppressed. Thirty years later a second revolt of slaves was provoked, both in southern Italy and in Sicily,—suppressed promptly in the former, but growing to seriousness in the latter. The Sicilian slaves had two leaders, Salvius and Athenio; but the former established his ascendancy and called himself king Triphon. The rebellion was suppressed at the cost of two heavy battles.—H. G. Liddell, *Hist. of Rome, bk.* 5, *ch.* 48, *and bk.* 6, *ch.* 55.

SLAVERY.

Ancient.

Among the Oriental races.—"From the writings of the Old Testament a fairly distinct conception can be formed of slavery among the Hebrews. Many modern critics hold the picture presented in the Book of Genesis, of the patriarchial age, its slavery included, to be not a transcript of reality, but an idealisation of the past. Whether this is so or not, can only be properly decided by the historico-critical investigations of specialists. Although the Hebrews are described as having shown extreme ferocity in the conquest of Canaan, their legislation as to slavery was, on the whole, considerate and humane. Slaves were not numerous among them, at least after the exile. Hebrew slavery has naturally been the subject of much research and controversy. The best treatise regarding it is still that of Mielziner. Slavery in the great military empires, which arose in ancient times in anterior Asia, was doubtless of the most cruel character; but we have no good account of slavery in these countries. The histories of Rawlinson, Duncker, Ranke, Ed. Meyer, and Maspero, tell us almost nothing about Chaldean, Assyrian, and Medo-Persian slavery. Much more is known as to slavery, and the condition of the labouring classes, in ancient Egypt, although of even this section of the history there is much need for an account in which the sources of information, unsealed by modern science, will be fully utilised. While in Egypt there were not castes, in the strict sense of the term, classes were very rigidly defined. There were troops of slaves, and as population was superabundant, labour was so cheap as to be employed to an enormous extent uselessly. It may suffice to refer to Wilkinson, Rawlinson, and Buckle. It does not seem certain that the Vedic Aryans had slaves before the conquest of India. Those whom they conquered became the Sudras, and a caste system grew up, and came to be represented as of divine appointment. The two lower castes of the Code of Manu have now given place to a great many. There was not a slave caste, but individuals of any caste might become slaves in exceptional circumstances. Even before the rise of Buddhism there were ascetics who rejected the distinction of castes. Buddhism proclaimed the religious equality of Brahmans and Sudras, but not the emancipation of the Sudras."—R. Flint, *History of the Philosophy of History: France, etc., pp.* 128-129.

Also in: E. J. Simcox, *Primitive Civilizations.*

Among the Greeks.—"The institution of slavery in Greece is very ancient; it is impossible to trace its origin, and we find it even in the very earliest times regarded as a necessity of nature, a point of view which even the following ages and the most enlightened philosophers adopted. In later times voices were heard from time to time protesting against the necessity of the institution, showing some slight conception of the idea of human rights, but these were only isolated opinions. From the very earliest times the right of the strongest had established the custom that captives taken in war, if not killed or ransomed, became the slaves of the conquerors, or were sold into slavery by them. . . . Besides the wars, piracy, originally regarded as by no means dishonourable, supplied the slave markets; and though in later times endeavours were made to set a limit to it, yet the trade in human

beings never ceased, since the need for slaves was considerable, not only in Greece, but still more in Oriental countries. In the historic period the slaves in Greece were for the most part barbarians, chiefly from the districts north of the Balkan peninsula and Asia Minor. The Greek dealers supplied themselves from the great slave markets held in the towns on the Black Sea and on the Asiatic coast of the Archipelago, not only by the barbarians themselves, but even by Greeks, in particular the Chians, who carried on a considerable slave trade. These slaves were then put up for sale at home; at Athens there were special markets held for this purpose on the first of every month. . . . A large portion of the slave population consisted of those who were born in slavery; that is, the children of slaves or of a free father and slave mother, who as a rule also became slaves, unless the owner disposed otherwise. We have no means of knowing whether the number of these slave children born in the houses in Greece was large or small. At Rome they formed a large proportion of the slave population, but the circumstances in Italy differed greatly from those in Greece, and the Roman landowners took as much thought for the increase of their slaves as of their cattle. Besides these two classes of slave population, those who were taken in war or by piracy and those who were born slaves, there was also a third, though not important, class. In early times even free men might become slaves by legal methods; for instance foreign residents, if they neglected their legal obligations, and even Greeks, if they were insolvent, might be sold to slavery by their creditors [see DEBT: ANCIENT GREEK], a severe measure which was forbidden by Solon's legislation at Athens, but still prevailed in other Greek states. Children, when exposed, became the property of those who found and educated them, and in this manner many of the hetaerae and flute girls had become the property of their owners. Finally, we know that in some countries the Hellenic population originally resident there were subdued by foreign tribes, and became the slaves of their conquerors, and their position differed in but few respects from that of the barbarian slaves purchased in the markets. Such native serfs were the Helots at Sparta, the Penestae in Thessaly, the Clarotae in Crete, etc. We have most information about the position and treatment of the Helots; but here we must receive the statements of writers with great caution, since they undoubtedly exaggerated a good deal in their accounts of the cruelty with which the Spartans treated the Helots. Still, it is certain that in many respects their lot was a sad one. . . . The rights assigned by law to the master over his slaves were very considerable. He might throw them in chains, put them in the stocks, condemn them to the hardest labour — for instance, in the mills — leave them without food, brand them, punish them with stripes, and attain the utmost limit of endurance; but, at any rate at Athens, he was forbidden to kill them. . . . Legal marriages between slaves were not possible, since they possessed no personal rights; the owner could at any moment separate a slave family again, and sell separate members of it. On the other hand, if the slaves were in a position to earn money, they could acquire fortunes of their own; they then worked on their own account, and only paid a certain proportion to their owners, keeping the rest for themselves, and when they had saved the necessary amount they could purchase their freedom, supposing the owner was willing to agree, for he was not compelled. . . . The protection given to slaves by the State was very small, but here again there were differences in different states. . . . It would be impossible to make a guess at the number of slaves in Greece. Statements on the subject are extant, but these are insufficient to give us any general idea. There can be no doubt that the number was a very large one; it was a sign of the greatest poverty to own no slaves at all, and Aeschines mentions, as a mark of a very modest household, that there were only seven slaves to six persons. If we add to these domestic slaves the many thousands working in the country, in the factories, and the mines, and those who were the property of the State and the temples, there seems no doubt that their number must have considerably exceeded that of the free population."— H. Blümner, *The Home Life of the Ancient Greeks, ch.* 15.

Among the Romans. — Slavery, under the Roman Empire, "was carried to an excess never known elsewhere, before or since [see ROME: B. C. 159–133]. Christianity found it permeating and corrupting every domain of human life, and in six centuries of conflict succeeded in reducing it to nothing. . . . Christianity, in the early ages, never denounced slavery as a crime; never encouraged or permitted the slaves to rise against their masters and throw off the yoke; yet she permeated the minds of both masters and slaves with ideas utterly inconsistent with the spirit of slavery. Within the Church, master and slave stood on an absolute equality."— W. R. Brownlow, *Lect's on Slavery and Serfdom in Europe, lect.* 1–2.

Mediæval and Modern.

Villeinage.— Serfdom.—"The persons employed in cultivating the ground during the ages under review [the 7th to the 11th centuries, in Europe] may be divided into three classes: I. 'Servi,' or slaves. This seems to have been the most numerous class, and consisted either of captives taken in war, or of persons the property in whom was acquired in some one of the various methods enumerated by Du Cange, voc. Servus, vol. vi. p. 447. The wretched condition of this numerous race of men will appear from several circumstances. 1. Their masters had absolute dominion over their persons. They had the power of punishing their slaves capitally, without the intervention of any judge. This dangerous right they possessed not only in the more early periods, when their manners were fierce, but it continued as late as the 12th century. . . . Even after this jurisdiction of masters came to be restrained, the life of a slave was deemed to be of so little value that a very slight compensation atoned for taking it away. If masters had power over the lives of their slaves, it is evident that almost no bounds would be set to the rigour of the punishments which they might inflict upon them. . . . The cruelty of these was, in many instances, excessive. Slaves might be put to the rack on very slight occasions. The laws with respect to these points are to be found in Potgiesserus, lib. iii. cap. 7. 2. and are shocking to

humanity. 2. If the dominion of masters over the lives and persons of their slaves was thus extensive, it was no less so over their actions and property. They were not originally permitted to marry. Male and female slaves were allowed, and even encouraged, to cohabit together. But this union was not considered as a marriage. . . . When the manners of the European nations became more gentle, and their ideas more liberal, slaves who married without their master's consent were subjected only to a fine. . . . 3. All the children of slaves were in the same condition with their parents, and became the property of their master. . . . 4. Slaves were so entirely the property of their masters that they could sell them at pleasure. While domestic slavery continued, property in a slave was sold in the same manner with that which a person had in any other moveable. Afterwards slaves became 'adscripti glebæ,' and were conveyed by sale, together with the farm or estate to which they belonged. . . . 5. Slaves had a title to nothing but subsistence and clothes from their master; all the profits of their labour accrued to him. . . . 6. Slaves were distinguished from freemen by a peculiar dress. Among all the barbarous nations, long hair was a mark of dignity and of freedom; slaves were for that reason, obliged to shave their heads. . . . II. 'Villani.' They were likewise 'adscripti glebæ,' or 'villæ,' from which they derived their name, and were transferable along with it. Du Cange, voc. Villanus. But in this they differed from slaves, that they paid a fixed rent to their master for the land which they cultivated, and, after paying that, all the fruits of their labour and industry belonged to themselves in property. This distinction is marked by Pierre de Fontain's Conseil. Vie de St. Louis par Joinville, p. 119, édit. de Du Cange. Several cases decided agreeably to this principle are mentioned by Muratori, ibid, p. 773. III. The last class of persons employed in agriculture were freemen. . . . Notwithstanding the immense difference between the first of these classes and the third, such was the spirit of tyranny which prevailed among the great proprietors of lands . . . that many freemen, in despair, renounced their liberty, and voluntarily surrendered themselves as slaves to their powerful masters. This they did in order that their masters might become more immediately interested to afford them protection, together with the means of subsisting themselves and their families. . . . It was still more common for freemen to surrender their liberty to bishops or abbots, that they might partake of the security which the vassals and slaves of churches and monasteries enjoyed. . . . The number of slaves in every nation of Europe was immense. The greater part of the inferior class of people in France were reduced to this state at the commencement of the third race of kings. Esprit des Loix, liv. xxx. c. ii. The same was the case in England. Brady, Pref. to Gen. Hist. . . . The humane spirit of the christian religion struggled long with the maxims and manners of the world, and contributed more than any other circumstance to introduce the practice of manumission. . . . The formality of manumission was executed in a church, as a religious solemnity. . . . Another method of obtaining liberty was by entering into holy orders, or taking the vow in a monastery. This was permitted for some time; but so many slaves escaped by this means out of the hands of their masters that the practice was afterwards restrained, and at last prohibited, by the laws of almost all the nations of Europe. . . . Great . . . as the power of religion was, it does not appear that the enfranchisement of slaves was a frequent practice while the feudal system preserved its vigour. . . . The inferior order of men owed the recovery of their liberty to the decline of that aristocratical policy."—W. Robertson, *Hist. of the Reign of Charles V., notes 9 and 20.*

Also in: A. Gurowski, *Slavery in History, ch. 15-20.*—T. Smith, *Arminius, pt. 3, ch. 5.*—See, also, Dedititius.

England.—Villeinage.—"Chief of all causes [of slavery] in early times and among all peoples was capture in war. The peculiar nature of the English conquests, the frequent wars between the different kingdoms and the private expeditions for revenge or plunder would render this a fruitful means whereby the number of slaves would increase on English soil. In this way the Romanized Briton, the Welshman, the Angle and Saxon and the Dane would all go to swell the body of those without legal status. In those troubled times any were liable to a reduction to slavery; the thegn might become a thrall, the lord might become the slave of one who had been in subjection under him, and Wulfstan, in that strong sermon of his to the English [against Slavery — preserved by William of Malmesbury], shows that all this actually took place. It was at the time of the Danish invasion and the sermon seems to point clearly to a region infested by Danes, a region in which was the seat of Wulfstan's labors, for he was Archbishop of York from 1002 to 1023. Wulfstan's graphic picture does not seem to be corroborated by the evidence of the Domesday Survey. Mr. Seebohm's map shows that in the west and southwest there appears the greatest percentage in that record; that in Gloucestershire nearly one fourth of the population, twenty-four per cent., were in a state of slavery; that in Cornwall, Devon, and Stafford the proportion was only one to every five; in central England about one to every seven; in the east, Essex, Surrey, Cambridge and Herts one to every nine; in East Anglia and Wessex one to every twenty-five, while in the northerly districts in Nottinghamshire one to two hundred is given, and in York, Rutland, Huntingdon and Lincoln no slaves at all are recorded. From this it is evident that the Danish invasion was less serious from this point of view than had been the original conquest. Domesday records the social condition 500 years after the settlement, and many influences, with Christianity as the primary, were at work to alter the results of that movement. The main inference to be drawn is that the continued warfare along the Welsh marches replenished the supply in the west, while in the east the slave element was rapidly decreasing and in the north, notwithstanding the Danish invasion, there was rather a commingling of peoples than a subjection of the one by the other. A second cause was the surrender into slavery of the individual's own body either by himself or a relative. This could be voluntary, the free act of the individual or his relatives, or it could be forced, resulting from the storm and stress of evil days. This surrender was one of the most unfortunate phases of the Anglo-Saxon servitude

and indicates to us the growing increase of the traffic in slaves; and the personal subjection was largely the outcome of that which was common to all peoples, the demand for slaves. Even as early as the time of Strabo, in the half century following Cæsar's conquest, the export of slaves began in Britain and before the Norman Conquest the sale of slaves had become a considerable branch of commerce. The insular position of England, her numerous ports, of which Bristol was one of the chief, gave rise during the Saxon occupation to a traffic in the slaves of all nations, and we know that slaves were publicly bought and sold throughout England and from there transported to Ireland or the continent. It was the prevalence of this practice and the wretched misery which it brought upon so many human beings, as well as the fact that it was against the precepts if not the laws of the church, that led Wulfstan, the Wilberforce of his time, to bring about the cessation of the slave trade at Bristol. From this place lines of women and children, gathered together from all England, were carried into Ireland and sold. . . . Besides this sale into slavery for purposes of traffic, which as a regular commerce was not prohibited until after the Norman conquest, many seem to have submitted themselves to the mastery of another through the need of food, which a year of famine might bring. A charter in the Codex Diplomaticus tells us of those men who bowed their heads for their meat in the evil days. Kemble thinks that such cases might have been frequent and Simeon of Durham, writing of the year 1069 when there was a dreadful famine in England, which raged particularly in the north, says that many sold themselves into slavery, that they might receive the needed support. . . . Even so late as the so-called laws of Henry I, such an act was recognized and a special procedure provided. . . . In addition to all those thus born into slavery or reduced to that condition in the ways above noted, there was another class made up of such as were reduced to slavery unwillingly as a penalty for debt or crime: these were known as 'witetheowas' or 'wite-fæstanmen.' . . . The legal condition of the slave was a particularly hard one; as a thing, not as a person, he was classed with his lord's goods and cattle and seems to have been rated according to a similar schedule, to be disposed of at the lord's pleasure like his oxen or horses. . . . They had no legal rights before the law and could bear no arms save the cudgel, the 'billum vel strublum,' as the laws of Henry I call it. Yet the position of the slave appears to have improved in the history of Anglo-Saxon law. . . . Hardly any part of the work of the Church was of greater importance than that which related to the moral and social elevation of the slave class. Its influence did much to mitigate their hard lot, both directly and indirectly."—C. McL. Andrews, *The Old English Manor, pp.* 181–188. —The Domesday Survey "attests the existence [in England, at the time of the Norman Conquest] of more than 25,000 servi, who must be understood to be, at the highest estimate of their condition, landless labourers; over 82,000 bordarii; nearly 7,000 cotarii and cotseti, whose names seem to denote the possession of land or houses held by service of labour or rent paid in produce; and nearly 110,000 villani. Above these were the liberi homines and sokemanni, who seem to represent the medieval and modern freeholder. The villani of Domesday are no doubt the ceorls of the preceding period, the men of the township, the settled cultivators of the land, who in a perfectly free state of society were the owners of the soil they tilled, but under the complicated system of rights and duties which marked the close of the Anglo-Saxon period had become dependent on a lord, and now under the prevalence of the feudal idea were regarded as his customary tenants; irremoveable cultivators, who had no proof of their title but the evidence of their fellow ceorls. For two centuries after the Conquest the villani are to be traced in the possession of rights both social and to a certain extent political. . . . They are spoken of by the writers of the time as a distinct order of society, who, although despicable for ignorance and coarseness, were in possession of considerable comforts, and whose immunities from the dangers of a warlike life compensated for the somewhat unreasoning contempt with which they were viewed by clerk and knight. During this time the villein could assert his rights against every oppressor but his master; and even against his master the law gave him a standing-ground if he could make his complaint known to those who had the will to maintain it. But there can be little doubt that the Norman knight practically declined to recognise the minute distinctions of Anglo-Saxon dependence, and that the tendency of both law and social habit was to throw into the class of native or born villeins the whole of the population described in Domesday under the heads of servi, bordarii and villani."—W. Stubbs, *Const. Hist. of Eng., ch.* 11, *sect.* 132.—"It has become a commonplace to oppose medieval serfdom to ancient slavery, one implying dependence on the lord of the soil and attachment to the glebe, the other being based on complete subjection to an owner. . . . If, from a general survey of medieval servitude we turn to the actual condition of the English peasantry, say in the 13th century, the first fact we have to meet will stand in very marked contrast to our general proposition. The majority of the peasants are villains, and the legal conception of villainage has its roots not in the connexion of the villain with the soil, but in his personal dependence on the lord. . . . As to the general aspect of villainage in the legal theory of English feudalism there can be no doubt. The 'Dialogus de Scaccario' gives it in a few words: the lords are owners not only of the chattels but of the bodies of their 'ascripticii,' they may transfer them wherever they please, 'and sell or otherwise alienate them if they like.' Glanville and Bracton, Fleta and Britton follow in substance the same doctrine, although they use different terms. They appropriate the Roman view that there is no difference of quality between serfs and serfs: all are in the same abject state. Legal theory keeps a very firm grasp of the distinction between status and tenure, between a villain and a free man holding in villainage, but it does not admit of any distinction of status among serfs: 'servus,' 'villanus' and 'nativus' are equivalent terms as to personal condition, although this last is primarily meant to indicate something else besides condition, namely, the fact that a person has come to it by birth. . . . Manorial lords could remove peasants from their holdings at their will and pleasure. An appeal to the courts was of no avail.

. . . Nor could the villain have any help as to the amount and nature of his services; the King's Courts will not examine any complaint in this respect, and may sometimes go so far as to explain that it is no business of theirs to interfere between the lord and his man. . . . Even as to his person, the villain was liable to be punished and put into prison by the lord, if the punishment inflicted did not amount to loss of life or injury to his body. . . . It is not strange that in view of such disabilities Bracton thought himself entitled to assume equality of condition between the English villain and the Roman slave, and to use the terms 'servus,' 'villanus,' and 'nativus' indiscriminately."—P. Vinogradoff, *Villainage in England, ch.* 1.—"Serfdom is met with for the last time in the statute-book of England under Richard II. By reason of the thriving condition of the towns, many villeins who had betaken themselves thither, partly with the consent of their owners and partly in secret, became free. If a slave remained a year and a day in a privileged town without being reclaimed in the interval, he became free. The wars carried on against France, the fact that serf-labour had become more expensive than that of free-men, thus rendering emancipation an 'economical' consideration, and finally, frequent uprisings, contributed to diminish the number of these poor helots. How rapidly serfdom must have fallen away may be inferred from the fact that the rebels under Wat Tyler, in 1381, clamored for the removal of serfdom; the followers of Jack Cade, in 1450, for everything else save the abolition of slavery. . . . The few purchasable slaves under the Tudors were met with only on the property of the churches, the monasteries, and the bishoprics. This slavery was often of a voluntary nature. On the king's domains bondmen were only emancipated by Elizabeth in 1574. The last traces of personal slavery, and of a subject race permanently annexed to the soil, are met with in the reign of James I. As a rule, it may be assumed that, with the Tudors, serfdom disappeared in England."—E. Fischel, *The English Constitution, bk.* 1, *ch.* 3.

France.—Villeinage.—On the condition of the servile classes in Gaul during the first five or six centuries after the barbarian conquest, see Gaul: 5-10th Centuries.—"In the Salic laws, and in the Capitularies, we read not only of Servi, but of Tributarii, Lidi, and Coloni, who were cultivators of the earth, and subject to residence upon their lord's estate, though not destitute of property or civil rights. Those who appertained to the demesne lands of the crown were called Fiscalini. . . . The number of these servile cultivators was undoubtedly great, yet in those early times, I should conceive, much less than it afterwards became. . . . The accumulation of overgrown private wealth had a natural tendency to make slavery more frequent. . . . As the labour either of artisans or of free husbandmen was but sparingly in demand, they were often compelled to exchange their liberty for bread. In seasons, also, of famine, and they were not unfrequent, many freemen sold themselves to slavery. . . . Others became slaves, as more fortunate men became vassals, to a powerful lord, for the sake of his protection. Many were reduced into this state through inability to pay those pecuniary compositions for offences which were numerous and sometimes heavy in the barbarian codes of law; and many more by neglect of attendance on military expeditions of the king, the penalty of which was a fine called Heribann, with the alternative of perpetual servitude. . . . The characteristic distinction of a villein was his obligation to remain upon his lord's estate. . . . But, equally liable to this confinement, there were two classes of villeins, whose condition was exceedingly different. In England, at least from the reign of Henry II., one only, and that the inferior species, existed; incapable of property, and destitute of redress, except against the most outrageous injuries. . . . But by the customs of France and Germany, persons in this abject state seem to have been called serfs, and distinguished from villeins, who were only bound to fixed payments and duties. . . . Louis Hutin, in France, after innumerable particular instances of manumission had taken place, by a general edict in 1315, reciting that his kingdom is denominated the kingdom of the Franks, that he would have the fact to correspond with the name, emancipates all persons in the royal domains upon paying a just composition, as an example for other lords possessing villeins to follow. Philip the Long renewed the same edict three years afterwards; a proof that it had not been carried into execution [see France: 12th-13th Centuries]. . . . Predial servitude was not abolished in all parts of France till the revolution. In some places, says Pasquier, the peasants are taillables à volonté, that is, their contribution is not permanent, but assessed by the lord with the advice of prud'hommes, resseants sur les lieux, according to the peasant's ability. Others pay a fixed sum. Some are called serfs de poursuite, who cannot leave their habitations, but may be followed by the lord into any part of France for the taille upon their goods. . . . Nor could these serfs, or gens de mainmorte, as they were sometimes called, be manumitted without letters patent of the king, purchased by a fine.—Recherches de la France, l. iv., c. 5. Dubos informs us that, in 1615, the Tiers État prayed the king to cause all serfs (hommes de pooste) to be enfranchised on paying a composition, but this was not complied with, and they existed in many parts when he wrote."—H. Hallam, *The Middle Ages, ch.* 2, *pt.* 2, *and foot-note* (*v.* 1).—"The last traces of serfdom could only be detected [at the time of the Revolution] in one or two of the eastern provinces annexed to France by conquest; everywhere else the institution had disappeared; and indeed its abolition had occurred so long before that even the date of it was forgotten. The researches of archæologists of our own day have proved that as early as the 13th century serfdom was no longer to be met with in Normandy."—A. de Tocqueville, *State of Society in France before the Revolution of* 1789, *bk.* 2, *ch.* 1.

Germany.—"As the great distinction in the German community was between the nobles and the people, so amongst the people was the distinction between the free and the servile. Next to those who had the happiness to be freeborn were the Freedmen, whom the indulgence or caprice of their masters relieved from the more galling miseries of thraldom. But though the

Freedman was thus imperfectly emancipated, he formed a middle grade between the Freeman and the Slave. He was capable of possessing property; but was bound to pay a certain rent, or perform a certain service, to the lord. He was forbidden to marry without the lord's assent; and he and his children were affixed to the farm they cultivated. . . . This mitigated servitude was called 'Lidum,' and the Freedman, Lidus, Leud, or Latt. The Lidus of an ecclesiastical master was called Colonus. . . . A yet lower class were the Slaves, or Serfs [Knechte] who were employed in menial or agricultural services; themselves and their earnings being the absolute property of their master, and entirely at his disposal. The number of these miserable beings was gradually increased by the wars with the Sclavonic nations, and the sale of their prisoners was one great object of traffic in the German fairs and markets. But a variety of causes combined to wear out this abominable system; and as civilization advanced, the severities of slavery diminished; so that its extinction was nearly accomplished before the 14th century."—Sir R. Comyn, *Hist. of the Western Empire, ch.* 27 (*v.* 2).—"The following table will show that the abolition of serfdom in most parts of Germany took place very recently. Serfdom was abolished—1. In Baden, in 1783. 2. In Hohenzollern, in 1804. 3. In Schleswig and Holstein, in 1804. 4. In Nassau, in 1808. 5. In Prussia, Frederick William I. had done away with serfdom in his own domains so early as 1717. The code of the Great Frederick . . . was intended to abolish it throughout the kingdom, but in reality it only got rid of it in its hardest form, the 'leibeigenschaft,' and retained it in the mitigated shape of 'erbunterthänigkeit.' It was not till 1809 that it disappeared altogether [see GERMANY: A. D. 1807–1808]. 6. In Bavaria serfdom disappeared in 1808. 7. A decree of Napoleon, dated from Madrid in 1808, abolished it in the Grand-duchy of Berg, and in several other smaller territories, such as Erfurt, Baireuth, &c. 8. In the kingdom of Westphalia, its destruction dates from 1808 and 1809. 9. In the principality of Lippe Detmold, from 1809. 10. In Schomburg Lippe, from 1810. 11. In Swedish Pomerania, from 1810, also. 12. In Hessen Darmstadt, from 1809 and 1811. 13. In Wurtemberg, from 1817. 14. In Mecklenburg, from 1820. 15. In Oldenburgh, from 1814. 16. In Saxony for Lusatia, from 1832. 17. In Hohenzöllern-Sigmaringen, only from 1833. 18. In Austria, from 1811. So early as in 1782, Joseph II. had destroyed 'leibeigenschaft;' but serfage in its mitigated form of 'erbunterthänigkeit,' lasted till 1811."—A. de Tocqueville, *State of Society in France before* 1789, *note D.*

Poland.—"The statements of the Polish nobles and their historians, to the effect that the peasant was always the hereditary property of the lord of the manor are false. This relation between eleven million men and barely half a million masters is an abuse of the last two hundred years, and was preceded by one thousand years of a better state of things. Originally the noble did not even possess jurisdiction over the peasant. It was wielded by the royal castellans, and in exceptional cases was bestowed on individual nobles, as a reward for distinguished services. . . . Those peasants were free who were domiciled according to German law, or who dwelt on the land which they themselves had reclaimed. It was owing to the feudal lords' need of labourers, that the rest of the peasants were bound to the soil and could not leave the land without permission. But the peasant did not belong to the lord, he could not be sold. . . . The fact that he could possess land prevented him from ever becoming a mere serf. . . . It is remarkable that the Polish peasant enjoyed these privileges at a time when villeinage existed in all the rest of Europe, and that his slavery began when other nations became free. Villeinage ceased in Germany as early as the 12th and 13th centuries, except in Mecklenburg, Pomerania, and Lusetia, which had had a Slavonic population. . . . In Poland it began in the 16th century. The kings were forced to promise that they would grant the peasant no letters of protection against his lord [Alexander, 1505; Sigismund I., 1543; Sigismund III., 1588]. Henceforth the lord was to have the right of punishing his disobedient subjects at his own discretion. . . . Without the repeal of a single statute favourable to the peasants, it became a fundamental principle of the constitution, that 'Henceforth no temporal court in existence can grant the peasant redress against his lord, though property, honour, or life be at stake.' The peasant was thus handed over to an arbitrary power, which had no limit, except that which the excess of an evil imposes on the evil itself. . . . There was no help for the peasant save in the mercy of his lord or in his own despair. The result was those terrible insurrections of the peasants—the very threat of which alarmed the nobles—the ruin of landed property, and the failure of those sources from which a nation should derive its prosperity and its strength."—Count von Moltke, *Poland: an Historical Sketch, ch.* 4.

Rome, Italy, and the Church.—"It is perhaps hardly surprising that the city of Rome should, even down to the 16th century, have patronised slavery, and it was only natural that the rest of Italy should follow the example of the metropolis of Christianity. The popes were wont to issue edicts of slavery against whole towns and provinces: thus for instance did Boniface VIII. against the retainers of the Colonnas [see PAPACY: A. D. 1294–1348]; Clement V. against the Venetians; Sixtus IV. against the Florentines [also Gregory XI. against the Florentines—see FLORENCE: A. D. 1375–1378]; Julius II. against the Bolognese and Venetians; and the meaning of it was, that any one who could succeed in capturing any of the persons of the condemned was required to make slaves of them. The example of Rome encouraged the whole of Italy, and especially Venice, to carry on a brisk trade in foreign, and especially female slaves. The privilege which had sprung up in Rome and lasted for some years, by virtue of which a slave taking refuge on the Capitol became free, was abolished in 1548 by Paul III.

upon the representation of the Senate. Rome, of all the great powers of Europe, was the last to retain slavery. Scholasticism having undertaken in the 13th century to justify the existing state of things, a theological sanction was discovered for slavery; Ægidius of Rome, taking Thomas Aquinas as his authority, declared that it was a Christian institution, since original sin had deprived man of any right to freedom."— J. I. von Döllinger, *Studies in European History, p.* 75.— See, also, CATTANI.

Russia. — Serfdom and Emancipation. — "In the earliest period of Russian history the rural population was composed of three distinct classes. At the bottom of the scale stood the slaves, who were very numerous. Their numbers were continually augmented by prisoners of war, by freemen who voluntarily sold themselves as slaves, by insolvent debtors, and by certain categories of criminals. Immediately above the slaves were the free agricultural labourers, who had no permanent domicile, but wandered about the country and settled temporarily where they happened to find work and satisfactory remuneration. In the third place, distinct from these two classes, and in some respects higher in the social scale, were the peasants properly so called. These peasants proper, who may be roughly described as small farmers or cottiers, were distinguished from the free agricultural labourers in two respects: they were possessors of land in property or usufruct, and they were members of a rural Commune. . . . If we turn now from these early times to the 18th century, we find that the position of the rural population has entirely changed in the interval. The distinction between slaves, agricultural labourers, and peasants has completely disappeared. All three categories have melted together into a common class, called serfs, who are regarded as the property of the landed proprietors or of the State. 'The proprietors [in the words of an imperial ukaze of April 15, 1721] sell their peasants and domestic servants not even in families, but one by one, like cattle, as is done nowhere else in the whole world.'" At the beginning of the 18th century, while the peasantry had "sunk to the condition of serfs, practically deprived of legal protection and subject to the arbitrary will of the proprietors, . . . they were still in some respects legally and actually distinguished from the slaves on the one hand and the 'free wandering people' on the other. These distinctions were obliterated by Peter the Great and his immediate successors. . . . To effect his great civil and military reforms, Peter required an annual revenue such as his predecessors had never dreamed of, and he was consequently always on the look-out for some new object of taxation. When looking about for this purpose, his eye naturally fell on the slaves, the domestic servants, and the free agricultural labourers. None of these classes paid taxes. . . . He caused, therefore, a national census to be taken, in which all the various classes of the rural population . . . should be inscribed in one category; and he imposed equally on all the members of this category a poll-tax, in lieu of the former land-tax, which had lain exclusively on the peasants. To facilitate the collection of this tax the proprietors were made responsible for their serfs; and the 'free wandering people' who did not wish to enter the army were ordered, under pain of being sent to the galleys, to inscribe themselves as members of a Commune or as serfs to some proprietor. . . . The last years of the 18th century may be regarded as the turning-point in the history of serfage. Up till that time the power of the proprietors had steadily increased, and the area of serfage had rapidly expanded. Under the Emperor Paul we find the first decided symptoms of a reaction. . . . With the accession of Alexander I. in 1801 commenced a long series of abortive projects of a general emancipation, and endless attempts to correct the more glaring abuses; and during the reign of Nicholas no less than six committees were formed at different times to consider the question. But the practical result of all these efforts was extremely small."— D. M. Wallace, *Russia, ch.* 29.—"The reign of Alexander II. [who succeeded Nicholas in 1855], like that of Alexander I., began with an outburst of reform enthusiasm in the educated classes. . . . The serfage question, which Nicholas had always treated most tenderly, was raised in a way that indicated an intention of dealing with it boldly and energetically. Taking advantage of a petition presented by the Polish landed proprietors of the Lithuanian provinces, praying that their relations with their serfs might be regulated in a more satisfactory way — meaning, of course, in a way more satisfactory for the proprietors — the Emperor authorized committees to be formed in that part of the country 'for ameliorating the condition of the peasants,' and laid down the general principles according to which the amelioration was to be effected. . . . This was a decided step, and it was immediately followed by one still more significant. His Majesty, without consulting his ordinary advisers, ordered the Minister of the Interior to send to the Governors all over European Russia copies of the instructions forwarded to the Governor-General of Lithuania, praising the supposed generous, patriotic intentions of the Lithuanian landed proprietors, and suggesting that, perhaps, the landed proprietors of other provinces might express a similar desire. The hint was, of course, taken, and in all provinces where serfage existed emancipation committees were formed. . . . There were, however, serious difficulties in the way. The emancipation was not merely a humanitarian question, capable of being solved instantaneously by an Imperial ukase. It contained very complicated problems, affecting deeply the economic, social, and political future of the nation. . . . It was universally admitted that the peasants should not be ejected from their homes, though their homesteads belonged legally to the proprietors; but there was great diversity of opinion as to how much land they should in future enjoy, by what tenure they should in future hold it, and how the patriarchal, undefined authority of the landlords should be replaced. . . . The main point at issue was whether the serfs should become agricultural labourers dependent economically and administratively on the landlords, or should be transformed into a class of independent communal proprietors. The Emperor gave his support to the latter proposal, and the Russian peasantry acquired privileges such as are enjoyed by no other peasantry in Europe."— *Alexander II.* (*Eminent Persons: Biog's, reprinted from The Times*).—"On the 3d of March, 1861 (Feb. 19,

O. S.), the emancipation act was signed. The rustic population then consisted of 22,000,000 of common serfs, 3,000,000 of appanage peasants, and 23,000,000 of crown peasants. The first class were enfranchised by that act; and a separate law has since been passed in favor of these crown peasants and appanage peasants, who are now as free in fact as they formerly were in name. A certain portion of land, varying in different provinces according to soil and climate, was affixed to every 'soul'; and government aid was promised to the peasants in buying their homesteads and allotments. The serfs were not slow to take this hint. Down to January 1, 1869, more than half the enfranchised male serfs have taken advantage of this promise; and the debt now owing from the people to the crown (that is, to the bondholders) is an enormous sum." —W. H. Dixon, *Free Russia, ch.* 51.—"Emancipation has utterly failed to realize the ardent expectations of its advocates and promoters. The great benefit of the measure was purely moral. It has failed to improve the material condition of the former serfs, who on the whole are [1888] worse off than they were before the Emancipation. The bulk of our peasantry is in a condition not far removed from actual starvation — a fact which can neither be denied nor concealed even by the official press."— Stepniak, *The Russian Peasantry, ch.* 1.

Modern: Indians.

Barbarity of the Spaniards in America, and humane labors of Las Casas.—"When Columbus came to Hispaniola on his second voyage [1493], with 17 ships and 1,500 followers, he found the relations between red men and white men already hostile, and in order to get food for so many Spaniards, foraging expeditions were undertaken, which made matters worse. This state of things led Columbus to devise a notable expedient. In some of the neighbouring islands lived the voracious Caribs. In fleets of canoes they would swoop upon the coasts of Hispaniola, capture men and women by the score, and carry them off to be cooked and eaten. Now Columbus wished to win the friendship of the Indians about him by defending them against these enemies, and so he made raids against the Caribs, took some of them captive, and sent them as slaves to Spain, to be taught Spanish and converted to Christianity, so that they might come back to the islands as interpreters, and thus be useful aids in missionary work. It was really, said Columbus, a kindness to these cannibals to enslave them and send them where they could be baptized and rescued from everlasting perdition; and then again they could be received in payment for the cargoes of cattle, seeds, wine, and other provisions which must be sent from Spain for the support of the colony. Thus quaintly did the great discoverer, like so many other good men before and since, mingle considerations of religion with those of domestic economy. It is apt to prove an unwholesome mixture. Columbus proposed such an arrangement to Ferdinand and Isabella, and it is to their credit that, straitened as they were for money, they for some time refused to accept it. Slavery, however, sprang up in Hispaniola before any one could have fully realized the meaning of what was going on. As the Indians were unfriendly and food must be had, while foraging expeditions were apt to end in plunder and bloodshed, Columbus tried to regulate matters by prohibiting such expeditions and in lieu thereof imposing a light tribute or tax upon the entire population of Hispaniola above 14 years of age. As this population was dense, a little from each person meant a good deal in the lump. The tribute might be a small piece of gold or of cotton, and was to be paid four times a year. . . . If there were Indians who felt unable to pay the tribute, they might as an alternative render a certain amount of personal service in helping to plant seeds or tend cattle for the Spaniards. No doubt these regulations were well meant, and if the two races had been more evenly matched, perhaps they might not so speedily have developed into tyranny. As it was, they were like rules for regulating the depredations of wolves upon sheep. Two years had not elapsed before the alternative of personal service was demanded from whole villages of Indians at once. By 1499 the island had begun to be divided into repartimientos, or shares. One or more villages would be ordered, under the direction of their native chiefs, to till the soil for the benefit of some specified Spaniard or partnership of Spaniards; and such a village or villages constituted the repartimiento of the person or persons to whom it was assigned. This arrangement put the Indians into a state somewhat resembling that of feudal villenage; and this was as far as things had gone when the administration of Columbus came abruptly to an end." Queen Isabella disapproved, at first, of the repartimiento system, "but she was persuaded to sanction it, and presently in 1503 she and Ferdinand issued a most disastrous order. They gave discretionary power to Ovando [who succeeded Columbus in the governorship] to compel Indians to work, but it must be for wages. They ordered him, moreover, to see that Indians were duly instructed in the Christian faith. . . . The way in which Ovando carried out the order about missionary work was characteristic. As a member of a religious order of knights, he was familiar with the practice of encomienda, by which groups of novices were assigned to certain preceptors to be disciplined and instructed in the mysteries of the order. The word encomienda means 'commandery' or 'preceptory,' and so it came to be a nice euphemism for a hateful thing. Ovando distributed Indians among the Spaniards in lots of 50 or 100 or 500, with a deed worded thus: 'To you, such a one, is given an encomienda of so many Indians, and you are to teach them the things of our holy Catholic Faith.' In practice, the last clause was disregarded as a mere formality, and the effect of the deed was simply to consign a parcel of Indians to the tender mercies of some Spaniard, to do as he pleased with them. If the system of repartimientos was in effect serfdom or villenage, the system of encomiendas was unmitigated slavery. Such a cruel and destructive slavery has seldom, if ever, been known. The work of the Indians was at first largely agricultural, but as many mines of gold were soon discovered they were driven in gangs to work in the mines. . . . In 1509 Ovando was recalled. . . . Under his successor, Diego Columbus, there was little improvement. The case had become a hard one to deal with. There

were now what are called 'vested rights,' the rights of property in slaves, to be respected. But in 1510 there came a dozen Dominican monks, and they soon decided, in defiance of vested rights, to denounce the wickedness they saw about them." Generally, the Spaniards who enjoyed the profit of the labor of the enslaved Indians hardened their hearts against this preaching, and were enraged by it; but one among them had his conscience awakened and saw the guiltiness of the evil thing. This was Bartolomé de Las Casas, who had joined the colonists at Hispaniola in 1502 and who had entered the priesthood in 1510. He owned slaves, whom he now set free, and he devoted himself henceforth to labors for the reformation of the system of slavery in the Spanish colonies. In 1516 he won the ear of Cardinal Ximenes, who appointed a commission of Hieronymite friars "to accompany Las Casas to the West Indies, with minute instructions and ample powers for making investigations and enforcing the laws. Ximenes appointed Las Casas Protector of the Indians, and clothed him with authority to impeach delinquent judges or other public officials. The new regulations, could they have been carried out, would have done much to mitigate the sufferings of the Indians. They must be paid wages, they must be humanely treated and taught the Christian religion. But as the Spanish government needed revenue, the provision that Indians might be compelled to work in the mines was not repealed. The Indians must work, and the Spaniards must pay them. Las Casas argued correctly that so long as this provision was retained the work of reform would go but little way. Somebody, however, must work the mines; and so the talk turned to the question of sending out white labourers or negroes. . . . At one time the leading colonists of Hispaniola had told Las Casas that if they might have license to import each a dozen negroes, they would coöperate with him in his plans for setting free the Indians and improving their condition. . . . He recalled this suggestion of the colonists, and proposed it as perhaps the least odious way out of the difficulty. It is therefore evident that at that period in his life he did not realize the wickedness of slavery so distinctly in the case of black men as in the case of red men. . . . In later years he blamed himself roundly for making any such concessions. Had he 'sufficiently considered the matter,' he would not for all the world have entertained such a suggestion for a moment. . . . The extensive development of negro slavery in the West Indies . . . did not begin for many years after the period in the career of Las Casas with which we are now dealing, and there is nothing to show that his suggestion or concession was in any way concerned in bringing it about." The fine story of the life and labours of Las Casas,— of the colony which he attempted to found on the Pearl Coast of the mainland, composed of settlers who would work for themselves and not require slaves, and which was ruined through the wicked lawlessness of other men,— of the terrible barbarians of the "Land of War" whom he transformed into peaceful and devoted Christians,— cannot be told in this place. His final triumphs in the conflict with slavery were: 1. In 1537, the procuring from Pope Paul III. of a brief "forbidding the further enslavement of Indians under penalty of excommunication." 2. In 1542, the promulgation of the New Laws by Charles V., the decisive clause in which was as follows: "'We order and command that henceforward for no cause whatever, whether of war, rebellion, ransom, or in any other manner, can any Indian be made a slave.' This clause was never repealed, and it stopped the spread of slavery. Other clauses went further, and made such sweeping provisions for immediate abolition that it proved to be impossible to enforce them. . . . The matter was at last compromised by an arrangement that encomiendas should be inheritable during two lives, and should then escheat to the crown. This reversion to the crown meant the emancipation of the slaves. Meanwhile such provisions were made . . . that the dreadful encomienda reverted to the milder form of the repartimiento. Absolute slavery was transformed into villenage. In this ameliorated form the system continued."—J. Fiske, *The Discovery of America, ch.* 11 (*v.* 2).

Negro.

A. D. 1442-1501.—Its beginning in Europe and its establishment in Spanish America.—"The peculiar phase of slavery that will be brought forward in this history is not the first and most natural one, in which the slave was merely the captive in war, 'the fruit of the spear,' as he has figuratively been called, who lived in the house of his conqueror and laboured at his lands. This system culminated among the Romans; partook of the fortunes of the Empire; was gradually modified by Christianity and advancing civilization; declined by slow and almost imperceptible degrees into serfage and vassalage; and was extinct, or nearly so, when the second great period of slavery suddenly uprose. This second period was marked by a commercial character. The slave was no longer an accident of war. He had become the object of war. He was no longer a mere accidental subject of barter. He was to be sought for, to be hunted out, to be produced; and this change accordingly gave rise to a new branch of commerce. Slavery became at once a much more momentous question than it ever had been, and thenceforth, indeed, claims for itself a history of its own."—Sir A. Helps, *The Spanish Conquest in Am., and its Relation to the Hist. of Slavery, bk.* 1, *ch.* 1.—"The first negroes imported into Europe after the extinction of the old pagan slavery were brought in one of the ships of Prince Henry of Portugal, in the year 1442. There was, however, no regular trade in negroes established by the Portuguese; and the importation of human beings fell off, while that of other articles of commerce increased, until after the discovery of America. Then the sudden destruction of multitudes of Indians in war, by unaccustomed labour, by immense privations, and by diseases new to them, produced a void in the labour market which was inevitably filled up by the importation of negroes. Even the kindness and the piety of the Spanish monarchs tended partly to produce this result. They forbade the enslaving of Indians, and they con-

trived that the Indians should live in some manner apart from the Spaniards; and it is a very significant fact that the great 'Protector of the Indians,' Las Casas, should, however innocently, have been concerned with the first large grant of licenses to import negroes into the West India Islands. Again, the singular hardihood of the negro race, which enabled them to flourish in all climates, and the comparative debility of the Indians, also favoured this result. The anxiety of the Catholic Church for proselytes combined with the foregoing causes to make the bishops and monks slow to perceive the mischief of any measure which might tend to save or favour large communities of docile converts."—The same, *bk.* 21, *ch.* 5 (*v.* 4).—The first notice of the introduction of negro slaves in the West Indies appears in the instructions given in 1501 to Ovando, who superseded Columbus in the go.ernorship.—The same, *bk.* 3, *ch.* 1 (*v.* 1).

A. D. 1562-1567.—John Hawkins engages England in the traffic. See AMERICA: A. D. 1562–1567.

A. D. 1609-1755.—In colonial New York.—"From the settlement of New York by the Dutch in 1609, down to its conquest by the English in 1664, there is no reliable record of slavery in that colony. That the institution was coeval with the Holland government, there can be no historical doubt. During the half-century that the Holland flag waved over the New Netherlands, slavery grew to such proportions as to be regarded as a necessary evil. . . . The West India Company had offered many inducements to its patroons. And its pledge to furnish the colonists with 'as many blacks as they conveniently could,' was scrupulously performed. . . . When New Netherlands became an English colony, slavery received substantial official encouragement, and the slave became the subject of colonial legislation. . . . Most of the slaves in the Province of New York, from the time they were first introduced, down to 1664, had been the property of the West India Company. As such they had small plots of land to work for their own benefit, and were not without hope of emancipation some day. But under the English government the condition of the slave was clearly defined by law and one of great hardships. On the 24th of October, 1684, an Act was passed in which slavery was for the first time regarded as a legitimate institution in the Province of New York under the English government." After the mad excitement caused by the pretended Negro Plot of 1741 (see NEW YORK: A. D. 1741) "the legislature turned its attention to additional legislation upon the slavery question. Severe laws were passed against the Negroes. Their personal rights were curtailed until their condition was but little removed from that of the brute creation. We have gone over the voluminous records of the Province of New York, and have not found a single act calculated to ameliorate the condition of the slave."—G. W. Williams, *Hist. of the Negro Race in America, v.* 1, *ch.* 13.—A census of the slaves in the Province of New York was made in 1755, the record of which has been preserved for all except the most important counties of New York, Albany and Suffolk. It shows 67 slaves then in Brooklyn.—*Doc. Hist. of N. Y., v.* 3.

A. D. 1619.—Introduction in Virginia. See VIRGINIA: A. D. 1619.

A. D. 1638-1781.—Beginning and ending in Massachusetts.—In the code of laws called the Body of Liberties, adopted by the General Court of Massachusetts in 1641, there is the following provision (Article 91): "There shall never be any Bond Slavery, Villinage, or Captivity amongst us, unless it be lawful Captives taken in just Wars, and such strangers as willingly sell themselves, or are sold to us. And these shall have all the liberties and Christian usages which the law of God, established in Israel concerning such persons, doth morally require. This exempts none from servitude who shall be judged thereto by authority." (*Mass. Hist. Soc. Coll., v.* 28, *p.* 231.)—"No instance has been discovered of a sale by one man of himself to another, although the power of doing this was recognized in the Body of Liberties. But of sales by the way of punishment for crime, under a sentence of a court, there are several instances recorded. . . . Of captives taken in war and sold into slavery by the colony, the number appears to have been larger, though it is not easy to ascertain in how many instances it was done. As a measure of policy, it was adopted in the case of such as were taken in the early Indian wars. . . . It was chiefly confined to the remnants of the Pequod tribe, and to such as were taken in the war with King Philip [see NEW ENGLAND: A. D. 1637, and 1676–1678]. . . . If now we recur to negro slavery, it does not appear when it was first introduced into the colony. . . . When Josslyn was here in 1638, he found Mr. Maverick the owner of three negro slaves. He probably acquired them from a ship which brought some slaves from the West Indies in that year. And this is the first importation of which we have any account. But Maverick was not properly a member of Winthrop's Company. He came here before they left England, and had his establishment, and lived by himself, upon Noddle's Island. . . . The arrival of a Massachusetts ship with two negroes on board, whom the master had brought from Africa for sale, in 1645, four years after the adoption of the Body of Liberties, furnished an opportunity to test the sincerity of its framers, in seeking to limit and restrict slavery in the colony. . . . Upon information that these negroes had been forcibly seized and abducted from the coast of Africa by the captain of the vessel, the magistrates interposed to prevent their being sold. But though the crime of man-stealing had been committed, they found they had no cognizance of it, because it had been done in a foreign jurisdiction. They, however, went as far towards reaching the wrong done as they could; and not only compelled the ship-master to give up the men, but sent them back to Africa, at the charge of the colony. . . . And they made this, moreover, an occasion, by an act of legislation of the General Court, in 1646, 'to bear witness,' in the language of the act, 'against the heinous and crying sin of man-stealing, as also to prescribe such timely redress for what is past, and such a law for the future, as may sufficiently deter all others belonging to us to have to do in such vile and most odious courses, justly abhorred of all good and just men.'. . . In 1767 a bill to restrain the importing of slaves passed the popular branch of the General Court, but failed in the Council. Nor would it have availed if it had passed both branches, because it would have been vetoed by the Governor,

acting under instructions from the Crown. This was shown in 1774, when such a bill did pass both branches of the General Court, and was thus vetoed. These successive acts of legislation were a constantly recurring illustration of the truth of the remark of a modern writer of standard authority upon the subject, that—'though the condition of slavery in the colonies may not have been created by the imperial legislature, yet it may be said with truth that the colonies were compelled to receive African slaves by the home government.' . . . The action of the government [of Massachusetts] when reorganized under the advice of the Continental Congress, was shown in September, 1776, in respect to several negroes who had been taken in an English prize-ship and brought into Salem to be sold. The General Court, having learned these facts, put a stop to the sale at once. And this was accompanied by a resolution on the part of the House—'That the selling and enslaving the human species is a direct violation of the natural rights alike vested in them by their Creator, and utterly inconsistent with the avowed principles on which this and the other States have carried on their struggle for liberty.' . . . In respect to the number of slaves living here at any one time, no census seems to have been taken of them prior to 1754. . . . In 1708, Governor Dudley estimates the whole number in the colony at 550; 200 having arrived between 1698 and 1707. Dr. Belknap thinks they were the most numerous here about 1745. And Mr. Felt, upon careful calculation, computes their number in 1754 at 4,489. . . . In 1755, Salem applied to the General Court to suppress slavery. Boston did the same in 1766, in 1767, and . . . in 1772. In 1773 the action of the towns was more general and decided." In 1780, the then free state of Massachusetts framed and adopted a constitution, the opening declaration of which was that "'all men are born free and equal, and have certain natural, essential, and unalienable rights.' . . . When [the next year] the highest judicial tribunal in the State was called upon to construe and apply this clause, they gave a response which struck off the chains from every slave in the commonwealth."—E. A. D. 1685-1772.—Black slaves in England.—"The extensive proprietary interests which, during last century, English merchants and members of the English aristocracy held in the American colonies and the West Indies, involved the possession also on their part of many slaves. Many of these black slaves were trained to act as household servants and personal attendants, and in this capacity accompanied their owners when travelling. The presence of black slaves in this country was therefore not an unfamiliar sight; but it will perhaps startle many readers to know that in 1764, according to the estimate of the 'Gentleman's Magazine' of the period, there were upwards of 20,000 black slaves domiciled in London alone, and that these slaves were openly bought and sold on 'Change.' The newspapers of the day represent these slaves as being upon the whole rather a trouble to their owners. For one thing, they ceased to consider themselves 'slaves' in this so-called 'free country'; hence they were often unwilling to work, and when forced to labour were generally sullen, spiteful, treacherous, and revengeful. They also frequently, as we shall find from the press advertisements of the day, made their escape, necessitating rewards being offered for their recapture. For instance, in the 'London Gazette' for March, 1685, there is an advertisement to the effect that a black boy of about 15 years of age, named John White, ran away from Colonel Kirke on the 15th inst. 'He has a silver collar about his neck, upon which is the colonel's coat of arms and cipher; he has upon his throat a great scar,' &c. A reward is offered for bringing him back. In the 'Daily Post' of August 4, 1720, is a similar notice. . . . Again, in the 'Daily Journal' for September 28, 1728, is an advertisement for a runaway black boy. It is added that he had the words 'My Lady Bromfield's black in Lincoln's Inn Fields' engraved on a collar round his neck. . . . That a collar was considered as essential for a black slave as for a dog is shown by an advertisement in the 'London Advertiser' for 1756, in which Matthew Dyer, working-goldsmith at the Crown in Duck Lane, Orchard Street, Westminster, intimates to the public that he makes 'silver padlocks for Blacks or Dogs; collars,' &c. . . . In the 'Tatler' for 1709, a black boy, 12 years of age, 'fit to wait on a gentleman,' is offered for sale at Dennis's Coffee-house, in Finch Lane, near the Royal Exchange. From the 'Daily Journal' of September 28, 1728, we learn that a negro boy, 11 years of age, was similarly offered for sale at the Virginia Coffee-house. . . . Again, in the 'Public Ledger' for December 31, 1761, we have for sale 'A healthy Negro Girl, aged about 15 years; speaks good English, works at her needle, washes well, does household work, and has had the small-pox.' So far these sales seem to have been effected privately; but later on we find that the auctioneer's hammer is being brought into play. In 1763, one John Rice was hanged for forgery at Tyburn, and following upon his execution was a sale of his effects by auction, 'and among the rest a negro boy.' He brought £32. The 'Gentleman's Magazine' of the day, commenting upon the sale of the black boy, says that this was 'perhaps the first custom of the kind in a free country.' . . . The 'Stamford Mercury' for [1771] bears record that 'at a sale of a gentleman's effects at Richmond, a Negro Boy was put up and sold for £32.' The paper adds: 'A shocking instance in a free country!' The public conscience had indeed for many years been disturbed on this question, the greater number in England holding that the system of slavery as tolerated in London and the country generally should be declared illegal. From an early period in last century the subject had not only been debated in the

public prints and on the platform, but had been made matter of something like judicial decision. At the first, legal opinion was opposed to the manumission of slaves brought by their masters to this country. In 1729, Lord Talbot, Attorney-general, and Mr. Yorke, Solicitor-general, gave an opinion which raised the whole question of the legal existence of slaves in Great Britain and Ireland. The opinion of these lawyers was that the mere fact of a slave coming into these countries from the West Indies did not render him free, and that he could be compelled to return again to those plantations. Even the rite of baptism did not free him — it could only affect his spiritual, not his temporal, condition. It was on the strength of this decision that slavery continued to flourish in England until, as we have seen, there were at one time as many as 20,000 black slaves in London alone. Chief-justice Holt had, however, expressed a contrary opinion to that above given; and after a long struggle the matter was brought to a final issue in the famous case of the negro Somersett. On June 22, 1772, it was decided by Lord Mansfield, in the name of the whole bench, that 'as soon as a slave set foot on the soil of the British Islands, he became free.' From that day to the present this has remained the law of our land as regards slavery. The poet Cowper expressed the jubilant feeling of the country over Lord Mansfield's dictum when he sung: . . . 'Slaves cannot breathe in England; if their lungs receive our air, that moment they are free.'"—*Black Slaves in Eng.* (*Chambers's Journal, Jan.* 31, 1891).

Also in: H. Greeley, *Hist. of the Struggle for Slavery Extension or Restriction, pp.* 2–3.

A. D. 1688-1780.—Beginning and growth of Antislavery sentiment among the Quakers.—Emancipation in Pennsylvania.—"So early as the year 1688, some emigrants from Kriesheim in Germany, who had adopted the principles of William Penn, and followed him into Pennsylvania, urged in the yearly meeting of the Society there, the inconsistency of buying, selling, and holding men in slavery, with the principles of the Christian religion. In the year 1696, the yearly meeting for that province took up the subject as a public concern, and the result was, advice to the members of it to guard against future importations of African slaves, and to be particularly attentive to the treatment of those, who were then in their possession. In the year 1711, the same yearly meeting resumed the important subject, and confirmed and renewed the advice, which had been before given. From this time it continued to keep the subject alive; but finding at length, that, though individuals refused to purchase slaves, yet others continued the custom, and in greater numbers that it was apprehended would have been the case after the public declarations which had been made, it determined, in the year 1754, upon a fuller and more serious publication of its sentiments; and therefore it issued, in the same year, . . . [a] pertinent letter to all the members within its jurisdiction. . . . This truly Christian letter, which was written in the year 1754, was designed, as we collect from the contents of it, to make the sentiments of the Society better known and attended to on the subject of the Slave-trade. It contains . . . exhortations to all the members within the yearly meeting of Pennsylvania and the Jerseys, to desist from purchasing and importing slaves, and, where they possessed them, to have a tender consideration of their condition. But that the first part of the subject of this exhortation might be enforced, the yearly meeting for the same provinces came to a resolution in 1755, That if any of the members belonging to it bought or imported slaves, the overseers were to inform their respective monthly meetings of it, that 'these might treat with them, as they might be directed in the wisdom of truth.' In the year 1774, we find the same yearly meeting legislating again on the same subject. By the preceding resolution they, who became offenders, were subjected only to exclusion from the meetings for discipline, and from the privilege of contributing to the pecuniary occasions of the Society; but by the resolution of the present year, all members concerned in importing, selling, purchasing, giving, or transferring Negro or other slaves, or otherwise acting in such manner as to continue them in slavery beyond the term limited by law or custom, were directed to be excluded from membership or disowned. . . . In the year 1776, the same yearly meeting carried the matter still further. It was then enacted, That the owners of slaves, who refused to execute proper instruments for giving them their freedom, were to be disowned likewise."—T. Clarkson, *Hist. of the Abolition of the Slave-Trade, v.* 1, *ch.* 5.—In 1780 Pennsylvania adopted an act for the gradual emancipation of all slaves within its territory, being the first among the States to perform that great act of justice.—W. C. Bryant and S. H. Gay, *Popular Hist. of the U. S., v.* 3, *ch.* 7.

A. D. 1698-1776.—England and the Slave-trade.—The Assiento contract with Spain.—After the opening of the slave trade to the English by Hawkins, in 1562–1564, "the traffic in human flesh speedily became popular. A monopoly of it was granted to the African Company, but it was invaded by numerous interlopers, and in 1698 the trade was thrown open to all British subjects. It is worthy of notice that while by the law of 1698 a certain percentage was exacted from other African cargoes for the maintenance of the forts along that coast, cargoes of negroes were especially exempted, for the Parliament of the Revolution desired above all things to encourage the trade. Nine years before, a convention had been made between England and Spain for supplying the Spanish West Indies with slaves from the island of Jamaica, and it has been computed that between 1680 and 1700 the English tore from Africa about 300,000 negroes, or about 15,000 every year. The great period of the English slave trade had, however, not yet arrived. It was only in 1713 that it began to attain its full dimensions. One of the most important and most popular parts of the Treaty of Utrecht was the contract known as the Assiento, by which the British Government secured for its subjects during thirty years an absolute monopoly of the supply of slaves to the Spanish colonies. The traffic was regulated by a long and elaborate treaty, guarding among other things against any possible scandal to the Roman Catholic religion from the presence of heretical slave-traders, and it provided that in the 30 years from 1713 to 1743 the English should bring into the Spanish West Indies no less than 144,000 negroes, or 4,800 every year; that during the first 25 years of the contract they might import a still greater number

on paying certain moderate duties, and that they might carry the slave trade into numerous Spanish ports from which it had hitherto been excluded. The monopoly of the trade was granted to the South Sea Company, and from this time its maintenance, and its extension both to the Spanish dominions and to her own colonies, became a central object of English policy. A few facts will show the scale on which it was pursued From Christmas 1752 to Christmas 1762 no less than 71,115 negroes were imported into Jamaica. In a despatch written at the end of 1762, Admiral Rodney reports that in little more than three years 40,000 negroes had been introduced into Guadaloupe. In a discussion upon the methods of making the trade more effectual, which took place in the English Parliament in 1750, it was shown that 46,000 negroes were at this time annually sold to the English colonies alone. A letter of General O'Hara, the Governor of Senegambia, written in 1766, estimates at the almost incredible figure of 70,000 the number of negroes who during the preceding fifty years had been annually shipped from Africa. A distinguished modern historian, after a careful comparison of the materials we possess, declares that in the century preceding the prohibition of the slave trade by the American Congress, in 1776, the number of negroes imported by the English alone, into the Spanish, French, and English colonies can, on the lowest computation, have been little less than three millions, and that we must add more than a quarter of a million, who perished on the voyage and whose bodies were thrown into the Atlantic."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century, ch.* 5 (*v.* 2).

Also in: G. Bancroft, *Hist. of the U. S.* (*Author's last rev.*), *pt.* 3, *ch.* 16 (*v.* 2).—D. Macpherson, *Annals of Commerce, v.* 4, *pp.* 141–157.—See, also, Utrecht: A. D. 1712–1714; Aix la Chapelle: The Congress; England: A. D. 1739, 1741; Georgia: A. D. 1738–1743; Argentine Republic: A. D. 1580–1777.

A. D. 1713-1776.—Maintained in the American colonies by the English Crown and Parliament.—"The success of the American Revolution made it possible for the different states to take measures for the gradual abolition of slavery and the immediate abolition of the foreign slave-trade. On this great question the state of public opinion in America was more advanced than in England. . . . George III. . . . resisted the movement for abolition with all the obstinacy of which his hard and narrow nature was capable. In 1769 the Virginia legislature had enacted that the further importation of negroes, to be sold into slavery, should be prohibited. But George III. commanded the governor to veto this act, and it was vetoed. In Jefferson's first draft of the Declaration of Independence, this action of the king was made the occasion of a fierce denunciation of slavery, but in deference to the prejudices of South Carolina and Georgia the clause was struck out by Congress. When George III. and his vetoes had been eliminated from the case, it became possible for the States to legislate freely on the subject."—J. Fiske, *The Critical Period of Am. Hist., p.* 71.—"During the regal government, we had at one time obtained a law which imposed such a duty on the importation of slaves as amounted nearly to a prohibition, when one inconsiderate assembly, placed under a peculiarity of circumstance, repealed the law. This repeal met a joyful sanction from the then sovereign, and no devices, no expedients, which could ever after be attempted by subsequent assemblies, and they seldom met without attempting them, could succeed in getting the royal assent to a renewal of the duty. In the very first session held under the republican government, the assembly passed a law for the perpetual prohibition of the importation of slaves. This will in some measure stop the increase of this great political and moral evil, while the minds of our citizens may be ripening for a complete emancipation of human nature."—T. Jefferson, *Notes on the State of Virginia, query* 8.—"It has been frequently stated that England is responsible for the introduction of negro slavery into British America; but this assertion will not stand the test of examination. . . . It is, however, true that from a very early period a certain movement against it may be detected in some American States, that there was, especially in the Northern Provinces, a great and general dislike to the excessive importation of negroes, and that every attempt to prohibit or restrict that importation was rebuked and defeated by England. . . . The State Governors were forbidden to give the necessary assent to any measures restricting it, and the English pursued this policy steadily to the very eve of the Revolution."—W. E. H. Lecky, *Hist. of Eng. in the 18th Century, ch.* 5 (*v.* 2).

A. D. 1735-1749.—Questioned early in Georgia.—Slavery prohibited at the beginning, and finally introduced. See Georgia: A. D. 1735–1749.

A. D. 1741.—The pretended Negro Plot in New York. See New York: A. D. 1741.

A. D. 1756.—Extent and distribution in the English American colonies.—"The number of African slaves in North America in 1756, the generation preceding the Revolution, was about 292,000. Of these Virginia had 120,000, her white population amounting at the same time to 173,000. The African increase in Virginia had been steady. In 1619 came the first 20, and in 1649 there were 300. In 1670, there were 2,000. In 1714, there were 23,000. In 1756, there were 120,000. The 172,000 who, in addition to these, made up the African population of America, were scattered through the provinces from New England to Georgia."—J. E. Cooke, *Virginia, p.* 367.

A. D. 1769-1785.—The ending of slavery in Connecticut and New Hampshire.—"For the New England States the Revolution was the death knell of slavery and of the slave-trade protected by the law [see action in Massachusetts and Rhode Island detailed above and below]. . . . In New Hampshire the institution died a natural death. As Belknap said in 1792, 'Slavery is not prohibited by any express law. . . . Those born since the constitution was made [1776] are free.' Although the legal status of the negro was somewhat different, he was practically treated in the same manner in New Hampshire that he was treated in Rhode Island. Connecticut did not change her royal charter into a state constitution until 1818, and her slaves were freed in 1784. The slave-trade in New England vessels did not cease when the state forbade it within New England territory. It was

conducted stealthily, but steadily, even into the lifetime of Judge Story. Felt gives instances in 1785, and the inference is that the business was prosecuted from Salem."—W. B. Weeden, *Economic and Social Hist. of New Eng., v. 2, pp.* 834–835.—"Connecticut was one of the first colonies to pass a law against the slave-trade. This was done in 1769. The main cause of the final abolition of slavery in the State was the fact that it became unprofitable. In 1784 the Legislature passed an Act declaring that all persons born of slaves, after the 1st of March in that year, should be free at the age of 25. Most of those born before this time were gradually emancipated by their masters, and the institution of slavery had almost died out before 1806."—E. B. Sanford, *Hist. of Conn., p.* 252.

A. D. 1774.—The bringing of slaves into Rhode Island prohibited.—"Africans had been brought to the shores of this colony in the earliest of the vessels in which the commerce of Newport had reached across the Atlantic. Becoming domesticated within the colony, the black population had in 1730 reached the number of 1,648, and in 1774 had become 3,761. How early the philanthropic movement in their behalf, and the measures looking towards their emancipation, had gained headway, cannot be determined with accuracy. It is probable that the movement originated with the Society of Friends within the colony. But little progress had been made towards any embodiment of this sentiment in legislative enactment, however, until the very year of the First Continental Congress, when at the direct instance of Stephen Hopkins (himself for many years an owner of slaves, though a most humane master), the General Assembly ordained [June, 1774] 'that for the future no negro or mulatto slave shall be brought into the colony,' and that all previously enslaved persons on becoming residents of Rhode Island should obtain their freedom. 'In this decided action,' once more, as has been so often seen to be the case with movements led by Stephen Hopkins, 'Rhode Island,' says Arnold, 'took the lead of all her sister colonies.'"—W. E. Foster, *Stephen Hopkins, pt. 2, pp.* 98–100.

Also in: W. D. Johnston, *Slavery in Rhode Island, pt. 2.*

A. D. 1776-1808.—Antislavery sentiment in the Southern (American) States.—The causes of its disappearance.— Jefferson's "'Notes on Virginia' were written in 1781–2. His condemnation of slavery in that work is most emphatic. 'The whole commerce between master and slave,' he says, 'is a perpetual exercise of the most boisterous passions; the most unremitting despotism on the one part, and degrading submission on the other. Our children see this and learn to imitate it. . . . The man must be a prodigy who can retain his manners and morals undepraved by such circumstances. With what execration should the statesman be loaded, who, permitting one-half the citizens thus to trample on the rights of the other, transforms those into despots and these into enemies—destroys the morals of the one part and the amor patriæ of the other? . . . Can the liberties of a nation be thought secure when we have removed their only firm basis—a conviction in the minds of men that these liberties are the gift of God; that they are not to be violated but with His wrath? Indeed, I tremble for my country when I reflect that God is just—that His justice cannot sleep forever.'. . . On the practical question, 'What shall be done about it?' Mr. Jefferson's mind wavered; he was in doubt. How can slavery be abolished? He proposed, in Virginia, a law, which was rejected, making all free who were born after the passage of the act. And here again he hesitated. What will become of these people after they are free? . . . He thought they had better be emancipated and sent out of the country. He therefore took up with the colonization scheme long before the Colonization Society was founded. He did not feel sure on this point. With his practical mind he could not see how a half million of slaves could be sent out of the country, even if they were voluntarily liberated; where they should be sent to, or how unwilling masters could be compelled to liberate their slaves. While, therefore, he did not favor immediate emancipation, he was zealous for no other scheme. . . . Mr. Jefferson, in August, 1785, wrote a letter to Dr. Richard Price, of London, author of a treatise on Liberty, in which very advanced opinions were taken on the slavery question. Concerning the prevalence of anti-slavery opinions at that period, he says: 'Southward of the Chesapeake your book will find but few readers concurring with it in sentiment on the subject of slavery. From the mouth to the head of the Chesapeake, the bulk of the people will approve its theory, and it will find a respectable minority, a minority ready to adopt it in practice; which, for weight and worth of character, preponderates against the greater number who have not the courage to divest their families of a property which, however, keeps their consciences unquiet. Northward of the Chesapeake you may find, here and there, an opponent to your doctrine, as you find, here and there, a robber and murderer, but in no greater number. In that part of America there are but few slaves, and they can easily disincumber themselves of them; and emancipation is put in such train that in a few years there will be no slaves northward of Maryland. In Maryland I do not find such a disposition to begin the redress of this enormity as in Virginia. These [the inhabitants of Virginia] have sucked in the principles of liberty, as it were, with their mothers' milk, and it is to these I look with anxiety to turn the fate of this question. Be not, therefore, discouraged.'" M. Brissot de Warville visited Washington, at Mount Vernon, in 1788, and conversed with him freely on the subject of slavery. "This great man declared to me," he wrote in his narrative, afterwards published, "that he rejoiced at what was doing in other States on the subject [of emancipation—alluding to the recent formation of several state societies]; that he sincerely desired the extension of it in his own State; but he did not dissemble that there were still many obstacles to be overcome; that it was dangerous to strike too vigorously at a prejudice which had begun to diminish; that time, patience, and information would not fail to vanquish it."—W. F. Poole, *Anti-Slavery Opinions before the year* 1800, *pp.* 25–35, *and foot-note.*—"In Virginia all the foremost statesmen—Washington, Jefferson, Lee, Randolph, Henry, and Madison, and Mason—were opposed to the continuance of slavery; and their opinions were shared by many of the largest planters. For tobacco-culture slavery did not seem so indispensable as for the raising of rice and indigo;

and in Virginia the negroes, half-civilized by kindly treatment, were not regarded with horror by their masters, like the ill-treated and ferocious blacks of South Carolina and Georgia. After 1808 the policy and the sentiments of Virginia underwent a marked change. The invention of the cotton-gin, taken in connection with the sudden prodigious development of manufactures in England, greatly stimulated the growth of cotton in the ever-enlarging area of the Gulf states, and created an immense demand for slave-labour, just at the time when the importation of negroes from Africa came to an end. The breeding of slaves, to be sold to the planters of the Gulf states, then became such a profitable occupation in Virginia as entirely to change the popular feeling about slavery. But until 1808 Virginia sympathized with the anti-slavery sentiment which was growing up in the northern states; and the same was true of Maryland. . . . In the work of gradual emancipation the little state of Delaware led the way. In its new constitution of 1776 the further introduction of slaves was prohibited, all restraints upon emancipation having already been removed. In the assembly of Virginia in 1778 a bill prohibiting the further introduction of slaves was moved and carried by Thomas Jefferson, and the same measure was passed in Maryland in 1783, while both these states removed all restraints upon emancipation. North Carolina was not ready to go quite so far, but in 1786 she sought to discourage the slave-trade by putting a duty of £5 per head on all negroes thereafter imported."—J. Fiske, *The Critical Period of Am. Hist., p.* 73.

A. D. 1792-1807.—Earliest measures for the suppression of the slave-trade.—"In 1776 the first motion against the trade was made in the English parliament; and soon leading statesmen of all parties, including Fox, Burke, and Pitt, declared themselves in favour of its abolition. In 1792 the Danish King took the lead in the cause of humanity by absolutely prohibiting his subjects from buying, selling, and transporting slaves; and at last, in 1807, the moral sense of the British public overrode the vested interests of merchants and planters; parliament, at Lord Grenville's instance, passed the famous act for the Abolition of the Slave trade; and thenceforward successive British governments set themselves steadily by treaty and convention to bring other nations to follow their example. . . . In 1794 the United States prohibited their subjects from slave-trading to foreign countries, and in 1807 they prohibited the importation of slaves into their own."—C. P. Lucas, *Hist. Geog. of the British Colonies, v.* 2, *pp.* 67–68.

A. D. 1815.—Declaration of the Powers against the slave-trade.—The following are passages from the Declaration against the Slave Trade, which was signed by the representatives of the Powers at the Congress of Vienna, February 8, 1815: "Having taken into consideration that the commerce known by the name of 'the Slave Trade' has been considered by just and enlightened men of all ages as repugnant to the principles of humanity and universal morality; . . . that at length the public voice, in all civilized countries, calls aloud for its prompt suppression; that since the character and the details of this traffic have been better known, and the evils of every kind which attend it, completely developed, several European Governments have, virtually, come to the resolution of putting a stop to it, and that, successively, all the Powers possessing Colonies in different parts of the world have acknowledged, either by Legislative Acts, or by Treaties, or other formal engagements, the duty and necessity of abolishing it: That by a separate Article of the late Treaty of Paris, Great Britain and France engaged to unite their efforts at the Congress of Vienna, to induce all the Powers of Christendom to proclaim the universal and definitive Abolition of the Slave Trade: That the Plenipotentiaries assembled at this Congress . . . declare, in the face of Europe, that, considering the universal abolition of the Slave Trade as a measure particularly worthy of their attention, conformable to the spirit of the times, and to the generous principles of their august Sovereigns, they are animated with the sincere desire of concurring in the most prompt and effectual execution of this measure, by all the means at their disposal. . . . The said Plenipotentiaries at the same time acknowledge that this general Declaration cannot prejudge the period that each particular Power may consider as most desirable for the definitive abolition of the Slave Trade. Consequently, the determining the period when this trade is to cease universally must be a subject of negociation between the Powers; it being understood, however, that no proper means of securing its attainment, and of accelerating its progress, are to be neglected."—L. Hertslet, *Collection of Treaties and Conventions, v.* 1, *p.* 11.

A. D. 1816-1849.—The organization of the American Colonization Society.—The founding of Liberia.—"Samuel J. Mills organized at Williams College, in 1808, for missionary work, an undergraduate society, which was soon transferred to Andover, and resulted in the establishment of the American Bible Society and Board of Foreign Missions. But the topic which engrossed Mills' most enthusiastic attention was

the Negro. The desire was to better his condition by founding a colony between the Ohio and the Lakes; or later, when this was seen to be unwise, in Africa. On going to New Jersey to continue his theological studies, Mills succeeded in interesting the Presbyterian clergy of that State in his project. Of this body one of the most prominent members was Dr. Robert Finley. Dr. Finley succeeded in assembling at Princeton the first meeting ever called to consider the project of sending Negro colonists to Africa. Although supported by few save members of the seminary, Dr. Finley felt encouraged to set out for Washington in December 1816, to attempt the formation of a colonization society. Earlier in this same year there had been a sudden awakening of Southern interest in colonization. . . . The interest already awakened and the indefatigable efforts of Finley and his friend Col. Charles Marsh, at length succeeded in convening the assembly to which the Colonization Society owes its existence. It was a notable gathering. Henry Clay, in the absence of Bushrod Washington, presided, setting forth in glowing terms the object and aspirations of the meeting. . . . John Randolph of Roanoke, and Robert Wright of Maryland, dwelt upon the desirability of removing the turbulent free-negro element and enhancing the value of property in slaves. Resolutions organizing the Society passed, and committees appointed to draft a Constitution and present a memorial to Congress. . . . With commendable energy the newly organized Society set about the accomplishment of the task before it. Plans were discussed during the summer, and in November two agents, Samuel J. Mills and Ebenezer Burgess, sailed for Africa to explore the western coast and select a suitable spot. . . . Their inspection was carried as far south [from Sierra Leone] as Sherbro Island, where they obtained promises from the natives to sell land to the colonists on their arrival with goods to pay for it. In May they embarked on the return voyage. Mills died before reaching home. His colleague made a most favorable report of the locality selected, though, as the event proved, it was a most unfortunate one. After defraying the expenses of this exploration the Society's treasury was practically empty. It would have been most difficult to raise the large sum necessary to equip and send out a body of emigrants; and the whole enterprise would have languished and perhaps died but for a new impelling force. . . . Though the importation of slaves had been strictly prohibited by the Act of Congress of March 2, 1807, no provision had been made for the care of the unfortunates smuggled in in defiance of the Statute. They became subject to the laws of the State in which they were landed; and these laws were in some cases so devised that it was profitable for the dealer to land his cargo and incur the penalty. The advertisements of the sale of such a cargo of 'recaptured Africans' by the State of Georgia drew the attention of the Society and of Gen. Mercer in particular to this inconsistent and abnormal state of affairs. His profound indignation shows forth in the Second Annual Report of the Society, in which the attention of the public is earnestly drawn to the question; nor did he rest until a bill was introduced into the House of Representatives designed to do away with the evil. This bill became a law on March 3, 1819. . . . The clause which proved so important to the embryo colony was that dealing with the captured cargoes: 'The President of the United States is hereby authorized to make such regulations and arrangements as he may deem expedient for the safe-keeping, support, and removal beyond the limits of the United States, of all such negroes, mulattoes, or persons of color as may be so delivered and brought within their jurisdiction; and to appoint a proper person or persons residing upon the coast of Africa as agent or agents for receiving the negroes, mulattoes, or persons of color, delivered from on board vessels seized in the prosecution of the slave trade by commanders of the United States armed vessels.' The sum of $100,000 was appropriated for carrying out the provisions of the Act. President Monroe determined to construe it as broadly as possible in aid of the project of colonization. After giving Congress, in his message, December 20, 1818, fair notice of his intention, no objection being made, he proceeded to appoint two agents, the Rev. Samuel Bacon, already in the service of the Colonization Society, and John P. Bankson as assistant, and to charter the ship Elizabeth. The agents were instructed to settle on the coast of Africa, with a tacit understanding that the place should be that selected by the Colonization Society. . . . For the expenses of the expedition $33,000 was placed in the hands of Mr. Bacon. Dr. Samuel A. Crozier was appointed by the Society as its agent and representative; and 86 negroes from various states — 33 men, 18 women, and the rest children, were embarked. On the 6th of February, 1820, the Mayflower of Liberia weighed anchor in New York harbor, and, convoyed by the U. S. sloop-of-war Cyane, steered her course toward the shores of Africa. The pilgrims were kindly treated by the authorities at Sierra Leone, where they arrived on the 9th of March; but on proceeding to Sherbro Island they found the natives had reconsidered their promise, and refused to sell them land. While delayed by negotiations the injudicious nature of the site selected was disastrously shown. The low marshy ground and the bad water quickly bred the African fever, which soon carried off all the agents and nearly a fourth of the emigrants. The rest, weakened and disheartened, were soon obliged to seek refuge at Sierra Leone. In March, 1821, a body of 28 new emigrants under charge of J. B. Winn and Ephraim Bacon, reached Freetown in the brig Nautilus. Winn collected as many as he could of the first company, also the stores sent out with them, and settled the people in temporary quarters at Fourah Bay, while Bacon set out to explore the coast anew and secure suitable territory. An elevated fertile and desirable tract was at length discovered between 250 and 300 miles S. E. of Sierra Leone. This was the region of Cape Montserado. It seemed exactly suited to the purposes of the colonists, but the natives refused to sell their land for fear of breaking up the traffic in slaves; and the agent returned discouraged. Winn soon died, and Bacon returned to the United States. In November, Dr. Eli Ayres was sent over as agent, and the U. S. schooner Alligator, commanded by Lieutenant Stockton, was ordered to the coast to assist in obtaining a foothold for the colony. Cape Montserado was again visited; and the address and firmness of Lieutenant Stockton accom-

plished the purchase of a valuable tract of land. The cape upon which the settlers proposed to build their first habitations consists of a narrow peninsula or tongue of land formed by the Montserado River, which separates it from the mainland. Just within the mouth of the river lie two small islands, containing together less than three acres. To these, the Plymouth of Liberia, the colonists and their goods were soon transported. But again the fickle natives repented the bargain, and the settlers were long confined to 'Perseverance Island,' as the spot was aptly named. . . . After a number of thrilling experiences the emigrants, on April 25, 1822, formally took possession of the cape, where they had erected rude houses for themselves; and from this moment we may date the existence of the colony. Their supplies were by this time sadly reduced; the natives were hostile and treacherous; fever had played havoc with the colonists in acclimating; and the incessant downpour of the rainy season had set in. Dr. Ayres became thoroughly discouraged, and proposed to lead them back to Sierra Leone. Then it was that Elijah Johnson, an emigrant from New York, made himself forever famous in Liberian history by declaring that he would never desert the home he had found after two years' weary quest! His firmness decided the wavering colonists; the agents with a few faint-hearted ones sailed off to America; but the majority remained with their heroic Negro leader. The little band, deserted by their appointed protectors, were soon reduced to the most dire distress, and must have perished miserably but for the arrival of unexpected relief. The United States Government had at last gotten hold of some ten liberated Africans, and had a chance to make use of the agency established for them at so great an expense. They were accordingly sent out in the brig Strong under the care of the Rev. Jehudi Ashmun. A quantity of stores and some 37 emigrants sent by the Colonization Society completed the cargo. Ashmun had received no commission as agent for the colony, and expected to return on the Strong; under this impression his wife had accompanied him. But when he found the colonists in so desperate a situation he nobly determined to remain with them at any sacrifice. . . . On the 24th of May, 1823, the brig Oswego arrived with 61 new emigrants and a liberal supply of stores and tools, in charge of Dr. Ayres, who, already the representative of the Society, had now been appointed Government Agent and Surgeon. One of the first measures of the new agent was to have the town surveyed and lots distributed among the whole body of colonists. Many of the older settlers found themselves dispossessed of the holdings improved by their labor, and the colony was soon in a ferment of excitement and insurrection. Dr. Ayres, finding his health failing, judiciously betook himself to the United States. The arrival of the agent had placed Mr. Ashmun in a false position of the most mortifying character. . . . Seeing the colony again deserted by the agent and in a state of discontent and confusion, he forgot his wrongs and remained at the helm. Order was soon restored but the seeds of insubordination remained. The arrival of 103 emigrants from Virginia on the Cyrus, in February 1824, added to the difficulty, as the stock of food was so low that the whole colony had to be put on half rations. This necessary measure was regarded by the disaffected as an act of tyranny on Ashmun's part; and when shortly after the complete prostration of his health compelled him to withdraw to the Cape De Verde Islands, the malcontents sent home letters charging him with all sorts of abuse of power, and finally with desertion of his post! The Society in consternation applied to Government for an expedition of investigation, and the Rev. R. R. Gurley, Secretary of the Society, and an enthusiastic advocate of colonization, was despatched in June on the U. S. schooner Porpoise. The result of course revealed the probity, integrity and good judgment of Mr. Ashmun; and Gurley became thenceforth his warmest admirer. As a preventive of future discontent a Constitution was adopted at Mr. Gurley's suggestion, giving for the first time a definite share in the control of affairs to the colonists themselves. Gurley brought with him the name of the colony -- Liberia, and of its settlement on the Cape -- Monrovia, which had been adopted by the Society on the suggestion of Mr. Robert Goodloe Harper of Maryland. He returned from his successful mission in August leaving the most cordial relations established throughout the colony. Gurley's visit seemed to mark the turning of the tide, and a period of great prosperity now began." The national independence of the commonwealth of Liberia was not assumed until 1847, when the first President of the Republic, Joseph J. Roberts, was elected.—J. H. T. McPherson, *Hist. of Liberia* (*Johns Hopkins Univ. Studies, series* 9, *no.* 10), *ch.* 2–3 *and* 5.

A. D. 1828-1832.—The rise of the Abolitionists in the United States.—Nat. Turner's Insurrection.—"While the reign of Andrew Jackson [1828–1836] paved the way on which the slave-holding interest ascended to the zenith of its supremacy over the Union, there arose, at the same time, in the body of the abolitionists, the enemy which undermined the firm ground under the feet of that same slave-holding interest. The expression, 'abolition of slavery,' is to be met with even before the adoption of the constitution. But the word 'abolitionism,' as descriptive of a definite political programme, occurs for the first time in this period. . . . The immediate precursor, and, in a certain sense, the father of the abolitionists, was Benjamin Lundy, a Quaker, born in New Jersey. In Wheeling, West Virginia, where he learned the saddler's trade, he had ample opportunity to become acquainted with the horrors of slavery, as great cargoes of slaves, on their way to the southern states, frequently passed the place. Lundy had

been endeavoring for some years to awaken an active interest among his neighbors in the hard lot of the slaves, when the Missouri question brought him to the resolve to consecrate his whole life to their cause. In 1821, he began to publish the 'Genius of Universal Emancipation,' which is to be considered the first abolition organ. The 19th century can scarcely point to another instance in which the command of Christ, to leave all things and follow him, was so literally construed and followed. Lundy gave up his flourishing business, took leave of his wife and of his two dearly beloved children, and began a restless, wandering life, to arouse consciences everywhere to a deeper understanding of the sin and curse of slavery. In the autumn of 1829 he obtained, as associate publisher of his sheet, William Lloyd Garrison, a young litterateur, born in Newburyport, Massachusetts, who, from the position of a poor apprentice to a tradesman, rose to be a type-setter, and from being a type-setter to be a journalist. The removal of Garrison from New England to Baltimore, where Lundy was then publishing the 'Genius,' was an event pregnant with consequences. Garrison had long been a zealous enemy of slavery, but had hitherto seen the right way of doing away with the evil in the efforts of the colonization society. What he now saw of slavery and its effects with his own eyes produced a complete revolution in his views in a few months. He not only recognized the impossibility of preventing the extension of slavery by colonizing the free negroes in Africa, to say nothing of gradually doing away with it altogether, but he became convinced also that the leading spirits of the colonization society purposely sought to induce the philanthropists of the north to enter on a wrong course, in the interests of slavery. Hence his own profession of faith was, henceforth, 'immediate and unconditional emancipation.' His separation from the more moderate Lundy, which was rendered unavoidable by this course, was hastened by an outside occurrence. The captain of a ship from New England took on board at Baltimore a cargo of slaves destined for New Orleans. Garrison denounced him on that account with passionate violence. The matter was carried before the court, and he was sentenced to prison and to pay a money fine for publishing a libelous article and for criminally inciting slaves to insurrection. After an imprisonment of seven weeks, his fine was paid by a New York philanthropist, Arthur Tappan, and Garrison left the city to spread his convictions by means of public lectures through New England. Although his success was not very encouraging, he, in January, 1831, established a paper of his own in Boston, known as 'The Liberator.' He was not only its publisher, and sole writer for it, but he had to be his own printer and carrier. His only assistant was a negro. . . . In one year, Garrison had found so many who shared his views, that it was possible to found the 'New England Anti-Slavery Society' in Boston [January, 1832]. The example was imitated in other states. The movement spread so rapidly that as early as December, 1833, a 'national' anti-slavery convention could be held in Philadelphia. The immediate practical result of this was the foundation of the 'American Anti-Slavery Society.' . . . In the same year that Garrison raised the standard of unconditional abolitionism in Boston, an event happened in Virginia, which, from the opposite side, contributed powerfully to lead the slavery question over into its new stage of development. In August, 1831, an uprising of slaves, under the leadership of Nat. Turner, occurred in Southampton county. It was, however, quickly subdued, but cost the life of 61 white persons, mostly women and children. The excitement throughout the entire south, and especially in Virginia and the states contiguous to it, was out of all proportion with the number of the victims and the extent of the conspiracy."—H. von Holst, *Const. and Pol. Hist. of the U. S., v. 2, ch. 2.*

A. D. 1834-1838.—Emancipation in the British colonies.—"The abolition of slavery, as Fox had said, was the natural consequence of the extinction of the slave trade; and in 1833 the act for the Abolition of Slavery throughout the British colonies was passed. The law was to take effect from the first of August 1834, but the slaves were to be apprenticed to their former owners till 1838 and in the case of agricultural slaves till 1840, and £20,000,000 sterling were voted as compensation to the slave-holders at the Cape, in Mauritius, and in the West Indies. As a matter of fact, however, two colonies, Antigua and the Bermudas, had the good sense to dispense with the apprenticeship system altogether, and in no case was it prolonged beyond 1838. . . . When Burke wrote, there were, according to his account, in the British West Indies at least 230,000 slaves against at the most 90,000 whites. In 1788 it is stated that there were 450,000 negroes in the British sugar colonies. At the last registration prior to emancipation, after British Guiana and Trinidad had become British possessions, the number of slaves was given at some 674,000."—C. P. Lucas, *Hist. Geog. of the British Colonies, v. 2, pp. 68–69.*

A. D. 1835-1842.—Petitions against Slavery.—The Atherton Gag. See United States of Am.: A. D. 1835; 1836; 1837–1838; 1842.

A. D. 1837.—The murder of Lovejoy.—Rev. Elijah P. Lovejoy, publishing a religious paper that dealt freely with slavery, had been driven from St. Louis to Alton, Ill. There he was thrice attacked by a mob and his press and printing materials were destroyed. On the third attack, which he and his friends resolutely resisted, he was killed.—J. C. and O. Lovejoy, *Memoir of Rev. Elijah P. Lovejoy.*

A. D. 1840-1847.—The Liberty Party and League.—The Liberty Party was formed by anti-slavery men who favored political action against slavery, but not through the old Whig and Democratic parties. In 1847 it became divided, and a separate body was formed which took the name of the Liberty League, and which

nominated Gerrit Smith for President, with Elihu Burritt for Vice-President. "As distinguished from the other wing, it may be said that the members of the Liberty League were less practical, more disposed to adhere to theories, and more fearful of sacrificing principle to policy."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in Am., v. 2, ch. 9.*

A. D. 1840-1860.—The Underground Railroad.—"The Underground Railroad was the popular designation given [in the United States] to those systematic and co-operative efforts which were made by the friends of the fleeing slave to aid him in eluding the pursuit of the slave-hunters, who were generally on his track. This 'institution,' as it was familiarly called, played an important part in the great drama of slavery and anti-slavery. By its timely and effective aid thousands were enabled to escape from the prison-house of bondage. . . . The practical working of the system required 'stations' at convenient distances, or rather the houses of persons who held themselves in readiness to receive fugitives, singly or in numbers, at any hour of day or night, to feed and shelter, to clothe if necessary, and to conceal until they could be despatched with safety to some other point along the route. There were others who held themselves in like readiness to take them by private or public conveyance. . . . When the wide extent of territory embraced by the Middle States and all the Western States east of the Mississippi is borne in mind, and it is remembered that the whole was dotted with these 'stations,' and covered with a network of imaginary routes, not found, indeed, in the railway guides or on the railway maps; that each station had its brave and faithful men and women, ever on the alert to seek out and succor the coming fugitive, and equally intent on deceiving and thwarting his pursuers; that there were always trusty and courageous conductors waiting, like the 'minute-men' of the Revolution, to take their living and precious freights, often by unfrequented roads, on dark and stormy nights, safely on their way; and that the numbers actually rescued were very great, many counting their trophies by hundreds, some by thousands, two men being credited with the incredible estimate of over 2,500 each,—there are materials from which to estimate, approximately at least, the amount of labor performed, of cost and risk incurred on the despised and deprecated Underground Railroad."—H. Wilson, *Hist. of the Rise and Fall of the Slave Power in Am., v. 2, ch. 6.*

A. D. 1869-1893.—The slave-trade in Africa and the European measures for its suppression.—"While Livingstone was making his terrible disclosures respecting the havoc wrought by the slave-trader in east central Africa, Sir Samuel Baker was striving to effect in north central Africa what has been so successfully accomplished in the Congo State. During his expedition for the discovery of the Albert Nyanza, his explorations led him through one of the principal man-hunting regions, wherein murder and spoliation were the constant occupations of powerful bands from Egypt and Nubia. These revelations were followed by diplomatic pressure upon the Khedive Ismail, and through the personal influence of an august personage he was finally induced to delegate to Sir Samuel the task of arresting the destructive careers of the slavers in the region of the upper Nile. In his book Ismailïa we have the record of his operations by himself. The firman issued to him was to the effect that he 'was to subdue to the Khedive's authority the countries to the south of Gondokoro, to suppress the slave trade, to introduce a system of regular commerce, to open to navigation the great lakes of the equator, and to establish a chain of military stations and commercial depots throughout central Africa.' This mission began in 1869, and continued until 1874. On Baker's retirement from the command of the equatorial Soudan the work was intrusted to Colonel C. G. Gordon—commonly known as Chinese Gordon. Where Baker had broken ground, Gordon was to build; what his predecessor had commenced, Gordon was to perfect and to complete. If energy, determination and self-sacrifice received their due, then had Gordon surely won for the Soudan that peace and security which it was his dear object to obtain for it. But slaving was an old institution in this part of the world. Every habit and custom of the people had some connection with it. They had always been divided from prehistoric time into enslavers and enslaved. How could two Englishmen, accompanied by only a handful of officers, removed 2,000 miles from their base of supplies, change the nature of a race within a few years? Though much wrong had been avenged, many thousands of slaves released, many a slaver's camp scattered, and many striking examples made to terrify the evil-doers, the region was wide and long; and though within reach of the Nile waters there was a faint promise of improvement, elsewhere, at Kordofan, Darfoor, and Sennaar, the trade flourished. After three years of wonderful work, Gordon resigned. A short time afterwards, however, he resumed his task, with the powers of a dictator, over a region covering 1,100,000 square miles. But the personal courage, energy, and devotion of one man opposed to a race can effect but little. . . . After another period of three years he again resigned. Then followed a revulsion. The Khedivial government reverted to the old order of things. . . . All traces of the work of Baker and Gordon have long ago been completely obliterated. Attention has been given of late to Morocco. This near neighbor of England is just twenty years behind Zanzibar. . . . While the heart of Africa responds to the civilizing influences moving from the east and the west and the south, Morocco remains stupidly indifferent and inert, a pitiful example of senility and decay. The remaining portion of North Africa which still fosters slavery is Tripoli. The occupation of Tunis by France has diverted such traffic in slaves as it maintained to its neighbor. Though the watchfulness of the Mediterranean cruisers renders the trade a precarious one, the small lateen boats are frequently able to sail from such ports as Benghazi, Derna, Solum, etc., with living freight, along the coast to Asia Minor. In the interior, which is inaccessible to travellers, owing to the fanaticism of the Senoussi sect, caravans from Darfoor and Wadai bring large numbers of slaves for the supply of Tripolitan families and Senouissian sanctuaries. . . . The partition of Africa among the European powers [by the Berlin Conference of 1885 and the Anglo-German Convention of 1890—see AFRICA: A. D. 1884–1891] . . . was the first effective blow dealt to the slave trade in inner Africa. The east coast, whence a few years ago the slaves marched in battalions to scatter over the wide interior of the continent for pillage and devastation, is to-day guarded by German and British troops. The island of Zanzibar, where they were equipped for their murderous enterprises, is under the British flag. . . . The final blow has been given by the act of the Brussels Antislavery Conference, lately [1893] ratified by the powers, wherein modern civilization has fully declared its opinions upon the question of slavery, and no single power will dare remain indifferent to them under penalty of obloquy and scorn. . . . The Congo State devotes her annual revenue of £150,000 and the export tax of £30,000 wholly to the task of securing her territory against the malign influences of the slave trade, and elevating it to the rank of self-protecting states. The German government undertakes the sure guardianship of its vast African territory as an imperial possession, so as to render it uninhabitable to the slave-hunter. . . . The coast towns are fortified and garrisoned; they [the Germans] are making their advance towards Lake Tanganika by the erection of military stations; severe regulations have been issued against the importation of arms and gunpowder; the Reichstag has been unstinted in its supplies of money; an experienced administrator, Baron von Soden, has been appointed an imperial commissioner, and scores of qualified subordinates assist him. . . . So far the expenses, I think, have averaged over £100,000 annually."—H. M. Stanley, *Slavery and the Slave Trade in Africa* (1893).

SLAVES AND GLADIATORS, Rising of the. See SPARTACUS, RISING OF.

SLAVONIC PEOPLES AND LANGUAGE.—"The name under which the Slavonians appear in ancient literature is generally Venedi or Veneti. . . . This name, unknown to the Slavonians themselves, is that by which the Teutonic tribes have from the first designated these their eastern neighbours, viz. Wends, and the use of this appellation by the Roman authors plainly shows that their knowledge of the Slavonians was derived only from the Germans. The Old German form of this name was Wineda, and Wenden is the name which the Germans of the present day give to the remnants of a Slavonic population, formerly large, who now inhabit Lusatia, while they give the name of Winden to the Slovens in Carinthia, Carniola and Styria. . . . If the Slavonians themselves ever applied any common name to the whole of their family, it must most probably have been that by which we now are accustomed to call them, Slavs, or Slavonians; its original native form was Slovene. . . . The most ancient sources from which we derive a knowledge of the Wends or Slavonians, unanimously place them by the Vistula. From that river, which must have formed their western frontier, they extended eastward to the Dnieper, and even beyond. To the south the Carpathians formed their boundary. To the north they perhaps crossed the Dwina into the territory afterwards known as Novgorod. In the extensive woods and marshes which cover these remote tracts the Slavonians seem to have dwelt in peace and quiet during the first centuries after Christ, divided into a number of small tribes or clans. . . . It was not long, however, before their primitive home became too narrow for the Slavs, and as their numbers could no longer be contained within their ancient boundaries—and, perhaps, compelled to it by pressure from without—they began to spread themselves to the west, in which direction the great migrations of the fourth and fifth centuries had made abundant room for the new immigrants. By two different roads the Slavs now begin to advance in great masses. On the one side, they cross the Vistula and extend over the tracts between the Carpathian mountains and the Baltic, right down to the Elbe, the former Germanic population of this region having either emigrated or been exhausted by their intestine contests and their deadly struggle with the Roman empire. By this same road the Poles, and probably also the Chekhs of Bohemia and Moravia, reached the districts they have inhabited since that period. In the rest of this western territory the Slavonians were afterwards almost exterminated during their bloody wars with the Germans, so that but few of their descendants exist. The other road by which the Slavonians advanced lay to the south-west, along the course of the Danube. These are the so-called South-Slavonians: the Bulgarians, the Servians, the Croatians, and farthest westward, the Slovens."—V. Thomsen, *Relations between Ancient Russia and Scandinavia, lect.* 1.—"A controversy has been maintained respecting the origin of the name [Slave]. The fact that . . . it has become among ourselves a synonyme of servitude, does not of course determine its real meaning. Those who bear it, naturally dignify its import and themselves by assigning to it the signification of 'glory';—the Slavonians to themselves are, therefore, 'the glorious race.' But the truth seems to be, that 'Slava' in its primitive meaning, was nothing but 'speech,' and that the secondary notions of 'fama,' 'gloria,' followed from this, as it does in other tongues. ['If I know not the meaning of the voice, I shall be unto him that speaketh a barbarian, and he that speaketh shall be a barbarian unto me.' I. Corinthians, xiv. 11.]. . . . Slave or Slavonian was, therefore, nothing more than the gentile appellative, derived from the use of the national tongue, and intended as antithetical to 'foreigner.' In the ancient historic world, the Slaves played an insignificant part. Some have identified them with the Scythians of Herodotus. . . . Like the Celts, they seemed destined to be driven into corners in the old world."—J. G. Sheppard, *The Fall of Rome, lect.* 3.—See SLAVE: ORIGIN, &c.—"The Wendic or Slav group [lingual] . . . came into Europe during the first five centuries of our era; it is divided into two great branches, Eastern and Western. The first includes Russian, Great Russian in West Central Russia; Little Russian, Rusniac, or Ruthene in the south of Russia and even into Austria, . . . Servian, Croatian, Slovenic, and Bulgarian, of which the most ancient form is to the whole group what Gothic is to the German dialects; modern Bulgarian is, on the contrary, very much altered. . . . The western branch covered from the 7th to the 9th century vast districts of Germany in which only German is now known: Pomerania, Mecklenburg, Brandenburg, Saxony, Western Bohemia, Austria, Styria, and Northern Carinthia. Though now much restricted, it can still boast numerous dialects; among others the Wendic of Lusatia, which is dying out, Tzech or Bohemian, which is very vigorous (ten millions), of which a variety, Slovac, is found in Hungary; lastly, Polish (ten millions)."—A. Lefèvre, *Race and Language, pp.* 239-240.—See, also: ARYANS; SARMATIA; and SCYTHIANS.

6-7th Centuries.—Migrations and settlements.—"The movements of the Avars in the sixth century [see AVARS] seem to have had much the same effect upon the Slaves which the movements of the Huns in the fourth century had upon the Teutons. . . . The Slaves seem to have been driven by the Turanian incursions in two directions; to the North-west and to the South-west. The North-western division gave rise to more than one European state, and their relations with Germany form an important part of the history of the Western Empire. These North-western Slaves do not become of importance till a little later. But the South-western division plays a great part in the history of the sixth and seventh centuries. . . . The Slaves play in the East, though less thoroughly and less brilliantly, the same part, half conquerors, half disciples, which the Teutons played in the West. During the sixth century they appear only as ravagers; in the seventh they appear as settlers. There seems no doubt that Heraclius encouraged Slavonic settlements south of the Danube, doubtless with a view to defence against the more dangerous Avars. . . . A number of Slavonic states thus arose in the lands north and east of the Hadriatic, as Servia, Chrobatia or Croatia, Carinthia. . . . Istria and

Dalmatia now became Slavonic, with the exception of the maritime cities. . . . The Slaves pressed on into a large part of Macedonia and Greece."—E. A. Freeman, *Historical Geog. of Europe, ch. 5, sect.* 4.—See, also, BALKAN AND DANUBIAN STATES: 7TH CENTURY.

SMITHSONIAN INSTITUTION, The. James Smithson, an Englishman, who died in 1829, left his property by will to the United States of America, for the founding of "an establishment for the increase and diffusion of knowledge among men." The bequest was accepted by the United States government, and the fund derived from it, amounting to about $541,000, was applied to the creation of the Smithsonian Institution, organized at Washington in 1846. The Institution, as planned by Professor Joseph Henry, its first secretary, has two objects, namely: to promote original investigation and study in science or literature, and to assist the diffusion of knowledge by interchanges between men of learning everywhere. In both directions it has done a great work. The National Museum of the United States, definitely created in 1879, is associated with the Smithsonian Institution, under its custody and direction. The United States Bureau of Ethnology is in working connection with it, and the American Historical Association is an affiliated Society. In 1891 the Institution received a gift of $200,000 from Thomas G. Hodgkins, of Setauket, N. Y.

SOCIAL MOVEMENTS.

Communism.—Socialism.—Labor-organization.

Utopias, Ancient and Modern.—"Speculative Communism has a brilliant history. It begins about six hundred years before Christ with Phaleas of Chalcedon, whom Milton speaks of as the first to recommend the equalization of property in land. Plato favors Communism. In the fifth book of the 'Republic,' Socrates is made to advocate, not merely community of goods, but also community of wives and children. This was no after-dinner debauch in the groves of the Academy, as Milton too severely suggests. It was a logical conclusion from a mistaken premise. . . . The ideal aimed at was the unity of the State, whose pattern appears to have been partly Pythagorean, and partly Spartan. In regard to property, the formulated purpose was, not to abolish wealth, but to abolish poverty. In the 'Laws' (v. 13), Plato would allow to the richest citizen four times as much income as to the poorest. In regard to women, the aim was not sensual indulgence, but the propagation and rearing of the fittest offspring. This community of wives and children was for the ruling class only; not for the husbandmen, nor for the artificers. So also, probably, the community of goods. We say probably, for the scheme is not wrought out in all its details, and Plato himself had no hope of seeing his dream realized till kings are philosophers, or philosophers are kings. The echoes of this Platonic speculation have been loud and long. About the year 316 B. C., Evemerus, sent eastward by Cassander, King of Macedon, on a voyage of scientific discovery, reports in his 'Sacred History' the finding of an island which he calls Panchaia, the seat of a Republic, whose citizens were divided into the three classes of Priests, Husbandmen, and Soldiers; where all property was common; and all were happy. In 1516 Sir Thomas More published his 'Utopia;' evidently of Platonic inspiration. More also chose an island for his political and social Paradise. He had Crete in mind. His island, crescent-shaped, and 200 miles wide at the widest point, contained 54 cities. It

had community of goods, but not of women. The 'Civitas Solis' of Campanella, published in 1623, was in imitation perhaps of More's 'Utopia.' This City of the Sun stood on a mountain in Ceylon, under the equator, and had a community both of goods and of women. About the same time Lord Bacon amused himself by writing the 'New Atlantis,' a mere fragment, the porch of a building that was never finished. In the great ferment of Cromwell's time the 'Oceana' of Harrington appeared (1656); a book famous in its day, with high traditional repute ever since, but now seldom read except by the very few who feel themselves called upon to master the literature of the subject. Hallam pronounces it a dull, pedantic book; and nobody disputes the verdict. Harrington advocates a division of land, no one to have more than two thousand pounds' (ten thousand dollars') worth. The upshot of it all would be, a moderate aristocracy of the middle classes. Such books belong to a class by themselves, which may be called Poetico-Political; æsthetic, scholarly, humane, and hopeful. They are not addressed to the masses. If they make revolutions, it is only in the long run. They are not battles, nor half battles, but only the bright wild dreams of tired soldiers in the pauses of battles. Communistic books with iron in them . . . are not modern only, but recent. Modern Communism, now grown so surly and savage everywhere, began mildly enough. As a system, it is mostly French, name and all. The famous writers are Saint-Simon, Fourier, Considérant, Proudhon, Cabet, and Louis Blanc."—R. D. Hitchcock, *Socialism, pp.* 33–36.

Also in: M. Kaufmann, *Utopias.*

Definition of Terms: Socialism.—Communism.—Collectivism.—"As socialism has been most powerful and most studied on the Continent, it may be interesting to compare the definitions given by some leading French and German economists. The great German economist Roscher defines it as including 'those tendencies which demand a greater regard for the common weal than consists with human nature.' Adolf Held says that 'we may define as socialistic every tendency which demands the subordination of the individual will to the community.' Janet more precisely defines it as follows:—'We call socialism every doctrine which teaches that the State has a right to correct the inequality of wealth which exists among men, and to legally establish the balance by taking from those who have too much in order to give to those who have not enough, and that in a permanent manner, and not in such and such a particular case—a famine, for instance, a public calamity, etc.' Laveleye explains it thus: 'In the first place, every socialistic doctrine aims at introducing greater equality in social conditions; and in the second place at realising those reforms by the law or the State.' Von Scheel simply defines it as the 'economic philosophy of the suffering classes.'"—T. Kirkup, *A History of Socialism, introd.*—"The economic quintessence of the socialistic programme, the real aim of the international movement, is as follows. To replace the system of private capital (i. e. the speculative method of production, regulated on behalf of society only by the free competition of private enterprises) by a system of collective capital, that is, by a method of production which would introduce a unified (social or 'collective') organization of national labour, on the basis of collective or common ownership of the means of production by all the members of the society. This collective method of production would remove the present competitive system, by placing under official administration such departments of production as can be managed collectively (socially or co-operatively), as well as the distribution among all of the common produce of all, according to the amount and social utility of the productive labour of each. This represents in the shortest possible formula the aim of the socialism of to-day."—A. Schäffle, *The Quintessence of Socialism, pp.* 3–4.—"Socialism, . . . while it may admit the state's right of property over against another state, does away with all ownership, on the part of members of the state, of things that do not perish in the using, or of their own labor in creating material products. Its first and last policy is to prevent the acquisition or exclusive use of capital, by any person or association under the control of the state, with the exception, perhaps, of articles of luxury or enjoyment procured by the savings of wages. No savings can give rise to what is properly called capital, or means of production in private hands. . . . Communism, in its ordinary signification, is a system or form of common life, in which the right of private or family property is abolished by law, mutual consent, or vow. . . . Collectivism, which is now used by German as well as by French writers, denotes the condition of a community when its affairs, especially its industry, is managed in the collective way, instead of the method of separate, individual effort. It has, from its derivation, some advantages over the vague word socialism, which may include many varieties of associated or united life."—T. D. Woolsey, *Communism and Socialism, pp.* 1–8.

A. D. 1720-1800.—Origin of Trades Unions in England.—"A Trade Union, as we understand the term, is a continuous association of wage-earners for the purpose of maintaining or improving the conditions of their employment. . . . We have, by our definition, expressly excluded from our history any account of the innumerable instances in which the manual workers have formed ephemeral combinations against their social superiors. Strikes are as old as history itself. The ingenious seeker of historical parallels might, for instance, find in the revolt, B. C. 1490, of the Hebrew brickmakers in Egypt against being required to make bricks without straw, a curious precedent for the strike of the Stalybridge cotton-spinners, A. D. 1892, against the supply of bad material for their work. But we cannot seriously regard, as in any way analogous to the Trade Union Movement of to-day, the innumerable rebellions of subject races, the slave insurrections, and the semi-servile peasant revolts of which the annals of history are full. . . . When, however, we pass from the annals of slavery or serfdom to those of the nominally free citizenship of the mediæval town, we are on more debatable ground. We make no pretence to a thorough knowledge of English town-life in the Middle Ages. But it is clear that there were at all times, alongside of the independent master craftsmen, a number of hired journeymen, who are known to have occasionally combined against their rulers and governors. . . . After detailed consideration of every published instance of a journeyman's fraternity in England, we are fully

convinced that there is as yet no evidence of the existence of any such durable and independent combination of wage-earners against their employers during the Middle Ages. There are certain other cases in which associations, which are sometimes assumed to have been composed of journeymen maintained a continuous existence. But in all these cases the 'Bachelors' Company,' presumed to be a journeymen's fraternity, formed a subordinate department of the masters' gild, by the rulers of which it was governed. It will be obvious that associations in which the employers dispensed the funds and appointed the officers can bear no analogy to modern Trade Unions. The explanation of the tardy growth of stable combination among hired journeymen is, we believe, to be found in the prospects of economic advancement which the skilled handicraftsman still possessed. . . . The apprenticed journeyman in the skilled handicrafts belonged, until comparatively modern times, to the same social grade as his employer, and was, indeed, usually the son of a master in the same or an analogous trade. So long as industry was carried on mainly by small masters, each employing but one or two journeymen, the period of any energetic man's service as a hired wage-earner cannot normally have exceeded a few years. . . . Under such a system of industry the journeymen would possess the same prospects of economic advancement that hindered the growth of stable combinations in the ordinary handicrafts, and in this fact may lie the explanation of the striking absence of evidence of any Trade Unionism in the building trades right down to the end of the eighteenth century. When, however, the capitalist builder or contractor began to supersede the master mason, master plasterer, &c., and this class of small entrepreneurs had again to give place to a hierarchy of hired workers, Trade Unions, in the modern sense, began, as we shall see, to arise. We have dwelt at some length upon these ephemeral associations of wage-earners and on the journeymen fraternities of the Middle Ages, because it might plausibly be argued that they were in some sense the predecessors of the Trade Union. But strangely enough it is not in these institutions that the origin of Trade Unionism has usually been sought. For the predecessor of the modern Trade Union, men have turned, not to the mediæval associations of the wage-earners, but to those of their employers — that is to say, the Craft Gilds. . . . The supposed descent of the Trade Unions from the mediæval Craft Gild rests, as far as we have been able to discover, upon no evidence whatsoever. The historical proof is all the other way. In London, for instance, more than one Trade Union has preserved an unbroken existence from the eighteenth century. The Craft Gilds still exist in the City Companies, and at no point in their history do we find the slightest evidence of the branching off from them of independent journeymen's societies. . . . We have failed to discover, either in the innumerable trade pamphlets and broad-sheets of the time, or in the Journals of the House of Commons, any evidence of the existence, prior to 1700, of continuous associations of wage-earners for maintaining or improving the conditions of their employment. And when we remember that during the latter decades of the seventeenth century the employers of labour, and especially the industrial 'companies' or corporations, memorialised the House of Commons on every conceivable grievance which affected their particular trade, the absence of all complaints of workmen's combinations suggests to us that no such combinations existed. In the early years of the eighteenth century we find isolated complaints of combinations 'lately entered into' by the skilled workers in certain trades. As the century progresses we watch the gradual multiplication of these complaints, met by counter-accusations presented by organised bodies of workmen. . . . If we examine the evidence of the rise of combinations in particular trades, we see the Trade Union springing, not from any particular institution, but from every opportunity for the meeting together of wage-earners of the same trade. Adam Smith remarked that 'people of the same trade seldom meet together, even for merriment and diversion, but the conversation ends in a conspiracy against the public, or in some contrivance to raise prices.' And there is actual evidence of the rise of one of the oldest of the existing Trade Unions out of a gathering of the journeymen 'to take a social pint of porter together.' More often it is a tumultuous strike, out of which grows a permanent organisation. . . . If the trade is one in which the journeymen frequently travel in search of work, we note the slow elaboration of systematic arrangements for the relief of these 'tramps' by their fellow-workers in each town through which they pass, and the inevitable passage of this far-extending tramping society into a national Trade Union. . . . We find that at the beginning of the eighteenth century the typical journeyman tailor in London and Westminster had become a lifelong wage-earner. It is not surprising, therefore, that one of the earliest instances of permanent Trade Unionism that we have been able to discover occurs in this trade. The master tailors in 1720 complain to Parliament that 'the Journeymen Taylors in and about the Cities of London and Westminster, to the number of seven thousand and upwards, have lately entered into a combination to raise their wages and leave off working an hour sooner than they used to do; and for the better carrying on their design have subscribed their respective names in books prepared for that purpose, at the several houses of call or resort (being publick-houses in and about London and Westminster) where they use; and collect several considerable sums of money to defend any prosecutions against them.' Parliament listened to the masters' complaint, and passed the Act 7, Geo. I. st. 1, c. 13, restraining both the giving and the taking of wages in excess of a stated maximum, all combinations being prohibited. From that time forth the journeymen tailors of London and Westminster have remained in effective though sometimes informal combination, the organisation centring round the fifteen or twenty 'houses of call.'"—S. and B. Webb, *The History of Trade-Unionism, ch.* 1.

A. D. 1753-1797.—Mably, Morelly, and the conspiracy of Babœuf, in France.—"If Rousseau cannot be numbered among the communistic writers, strictly so called, two of his contemporaries, Mably and Morelly—the first more a dreamer, the second of a more practical spirit—deserve that title. . . . In the social theory of Mably, inequality of condition is the great evil in the world . . . Mably was a theorist who shrunk

back from the practical application of his own theories. The establishment of community of goods, and even of equality of fortunes, he dared not advocate. 'The evil,' he says, 'is too inveterate for the hope of a cure.' And so he advised half measures — agrarian laws fixing the maximum of landed estates, and sumptuary laws regulating expenses. . . . Morelly, whose principal works are a communistic poem, called 'The Basiliade' (1753) and 'The Code of Nature' (1755), is called by a French writer one of the most obscure authors of the last century. But he knew what he wanted, and had courage to tell it to others. . . . Morelly's power on subsequent opinion consists in his being the first to put dreams or theories into a code; from which shape it seemed easy to fanatical minds to carry it out into action. His starting-point is that men can be made good or evil by institutions. Private property, or avarice called out by it, is the source of all vice. 'Hence, where no property existed there would appear none of its pernicious consequences.' . . . In 1782, Brissot de Warville invented the phrase, used afterward by Proudhon, Propriété c'est le vol. . . . Twelve years afterward a war against the rich began, and such measures as a maximum of property and the abolition of the right to make a will were agitated. But the right of property prevailed, and grew stronger after each new revolution. In 1796 the conspiracy of the Equals, or, as it is generally called, of Babœuf, was the final and desperate measure of a portion of those Jacobins who had been stripped by the fall of Robespierre (in 1794) of political power. It was the last hope of the extreme revolutionists, for men were getting tired of agitations and wanted rest. This conspiracy seems to have been fomented by Jacobins in prison; and it is said that one of them, who was a believer in Morelly and had his work in his hands, expounded its doctrines to his fellow-prisoner Babœuf. When they were set at liberty by an amnesty law, there was a successful effort made to bring together the society or sect of the Equals; but it was found that they were not all of one mind. Babœuf was for thorough measures — for a community of goods and of labor, an equality of conditions and of comforts. . . . There was a secret committee of the society of the Equals, as well as an open society. The latter excited the suspicion of the Directory, and an order was given to suspend its sessions in the Pantheon (or Church of St. Geneviève). The order was executed by Bonaparte, then general of the army of the interior, who dispersed the members and put a seal on the doors of the place of meeting. Next the Equals won over a body of the police into their measures; and, when this force was disbanded by the Directory, the Equals established a committee of public safety. The committee was successful in bringing as many as sixty of the party of the mountain into their ranks, and an insurrection was projected. Seventeen thousand fighting men were calculated upon by the conspirators as at their disposal. But an officer of the army whom they had tried to bring into their plots denounced them to the Directory. The leading conspirators were arrested [1797]. Babœuf and Darthé suffered death, and five others were banished."— T. D. Woolsey, *Communism and Socialism*, *pp.* 97–104.

A. D. 1774-1875.— The Communities of the Shakers. See SHAKERS.

A. D. 1800-1824.— Robert Owen.— His experiments at New Lanark and his New Harmony Society.— "Whilst in France the hurricane of the Revolution swept over the land, in England a quieter, but not on that account less tremendous, revolution was going on. Steam and the new tool-making machinery were transforming manufacture into modern industry, and thus revolutionising the whole foundation of bourgeois society. . . . With constantly increasing swiftness the splitting-up of society into large capitalists and non-possessing proletarians went on. Between these, instead of the former stable middle-class, an unstable mass of artisans and small shopkeepers, the most fluctuating portion of the population, now led a precarious existence. The new mode of production was, as yet, only at the beginning of its period of ascent; as yet it was the normal, regular method of production — the only one possible under existing conditions. Nevertheless, even then it was producing crying social abuses. . . . At this juncture there came forward as a reformer a manufacturer 29 years old — a man of almost sublime, childlike simplicity of character, and at the same time one of the few born leaders of men. Robert Owen had adopted the teaching of the materialistic philosophers: that man's character is the product, on the one hand, of heredity, on the other, of the environment of the individual during his lifetime, and especially during his period of development. In the industrial revolution most of his class saw only chaos and confusion, and the opportunity of fishing in these troubled waters and making large fortunes quickly. He saw in it the opportunity of putting into practice his favourite theory, and so of bringing order out of chaos. He had already tried it with success, as superintendent of more than 500 men in a Manchester factory. From 1800 to 1829, he directed the great cotton mill at New Lanark, in Scotland, as managing partner, along the same lines, but with greater freedom of action and with a success that made him a European reputation. A population, originally consisting of the most diverse and, for the most part, very demoralised elements, a population that gradually grew to 2,500, he turned into a model colony, in which drunkenness, police, magistrates, lawsuits, poor laws, charity, were unknown. And all this simply by placing the people in conditions worthy of human beings, and especially by carefully bringing up the rising generation. He was the founder of infant schools, and introduced them first at New Lanark. . . . Whilst his competitors worked their people 13 or 14 hours a day, in New Lanark the working-day was only 10½ hours. When a crisis in cotton stopped work for four months, his workers received their full wages all the time. And with all this the business more than doubled in value, and to the last yielded large profits to its proprietors. In spite of all this, Owen was not content. The existence which he secured for his workers was, in his eyes, still far from being worthy of human beings. 'The people were slaves at my mercy.' . . . 'The working part of this population of 2,500 persons was daily producing as much real wealth for society as, less than half a century before, it would have required the working part of a population of 600,000 to create. I asked myself, what became of the difference between the wealth consumed

by 2,500 persons and that which would have been consumed by 600,000?' The answer was clear. It had been used to pay the proprietors of the establishment 5 per cent. on the capital they had laid out, in addition to over £300,000 clear profit. And that which held for New Lanark held to a still greater extent for all the factories in England. . . . The newly-created gigantic productive forces, hitherto used only to enrich individuals and to enslave the masses, offered to Owen the foundations for a reconstruction of society; they were destined, as the common property of all, to be worked for the common good of all. Owen's Communism was based upon this purely business foundation, the outcome, so to say, of commercial calculation. Throughout, it maintained this practical character."—F. Engels, *Socialism, Utopian and Scientific, pp.* 19–24. — Owen's projects "were received with applause at first. 'The Times' spoke of 'his enlightened zeal in the cause of humanity;' the Duke of Kent writes to Owen: 'I have a most sincere wish that a fair trial should be given to your system, of which I have never hesitated to acknowledge myself an admirer;' Lord Brougham sympathised with the propounder of this social scheme; the judicial philosopher Bentham became actually a temporary ally of the 'wilful Welshman;' a committee was appointed, including Ricardo and Sir R. Peel, who recommended Owen's scheme to be tried; it was taken up by the British and Foreign Philanthropic Society for the permanent relief of the working-classes; it was actually presented to Parliament with petitions humbly praying that a Committee of the House might be appointed to visit and report on New Lanark. But the motion was lost. The temporary enthusiasm cooled down. . . . Contemporaneously with royal speeches alluding to the prosperity of trade, and congratulations as to the flourishing appearance of town and country, the voice of Owen is silenced with his declining popularity. It must be remembered also that he had by this time justly incurred the displeasure of the religious public, by the bold and unnecessarily harsh expressions of his ethical and religious convictions. Those who could distinguish the man from his method, who were fully aware of his generous philanthropy, purity of private life, and contempt of personal advancement, could make allowance for his rash assertions. The rest, however, turned away with pious horror or silent contempt from one who so fiercely attacked positive creeds, and appeared unnecessarily vehement in his denial of moral responsibility. Owen set his face to the West, and sought new adherents in America, where he founded [1824] a 'Preliminary Society' in 'New Harmony' [see below: A. D. 1805–1824], which was to be the nucleus of his future society. . . . In the following year Owen agreed to a change in the constitution, in favour of communism, under the title of the 'New Harmony Community of Equality.' The settlement enjoyed a temporary prosperity, but soon showed signs of decay, and Owen was destined to meet with as many trials in the new as he had encountered discouragements in the old world." — M. Kaufmann, *Utopias, ch.* 6.

A. D. 1800-1875.—Struggle of the Trades Unions in England for a legal existence.— During the 18th century, "the employers succeeded in passing a whole series of laws, some of them of Draconian severity, designed to suppress combinations of working men. In England they are called the Combination Laws, and culminated in the Act of 40 George III., c. 106, which was passed in 1800 in response to a petition from the employers. It made all trade combinations illegal. . . . The result of this law, which was expressly designed to put an end to strikes altogether, is an instructive example of the usual effect of such measures. The workmen's associations, which had frequently hitherto been formed quite openly, became secret, while they spread through the length and breadth of England. The time when the books of the Union were concealed on the moors, and an oath of secrecy was exacted from its members, is still a living tradition in labour circles. It was a time, when the hatred of the workers towards the upper classes and the legislature flourished luxuriantly, while the younger generation of working men who had grown up under the shadow of repressive legislation, became the pillars of the revolutionary Chartist movement. The old struggle against capital assumed a more violent character. . . . It was the patent failure of the Combination Laws which gave the stimulus to the suggestion of repeal soon after 1820," and the repeal was accomplished by the Act of 1824. "The immediate consequence of this Act was the outbreak of a number of somewhat serious strikes. The general public then took fright, and thus the real struggle for the right of combination began after it had received legal recognition. In 1825, the employers rallied and demanded the re-enactment of the earlier laws on the ground that Parliament had carried their repeal with undue precipitation. . . . The Act of 1825 which repealed that of the previous year, was a compromise in which the opponents of free combination had gained the upper hand. But they had been frustrated in their attempt to stamp out the Unions with all the rigour of the law, for the champions of the Act of 1824 were in a position to demonstrate that the recognition of combination had already done something to improve the relations between capital and labour. It had at least done away with that secrecy which in itself constituted a danger to the State; and now that the Unions were openly avowed, their methods had become less violent. Nevertheless, the influence of the manufacturers strongly predominated in framing the Bill. . . . The only advance on the state of things previous to 1824 which had been secured was the fundamental point that a combination of working men was not in itself illegal — though almost any action which could rise out of such a combination was prohibited. Yet it was under the Act of 1825 that the Trade Unions grew and attained to that important position in which we find them at the beginning of the seventies. Here was emphatically a movement which the law might force into illegal channels, but could not suppress. . . . The most serious danger that the Trade Unions encountered was in the course of the sixties. Under the leadership of one Broadhead, certain Sheffield Unions had entered on a course of criminal intimidation of non-members. The general public took their action as indicating the spirit of Trade Unions generally. In point of fact, the workmen employed in the

Sheffield trade were in a wholly exceptional position. . . . But both in Parliament and the Press it was declared that the occurrences at Sheffield called for more stringent legislation and the suppression of combinations of working men. . . . But times had changed since 1825. The Unions themselves called for the most searching inquiry into their circumstances and methods, which would, they declared, prove that they were in no way implicated in such crimes as had been committed in Sheffield. The impulse given by Thomas Carlyle had raised powerful defenders for the workmen, first among whom we may mention the positivist Frederic Harrison, and Thomas Hughes, the co-operator. . . . The preliminaries to the appointment of the Commission of 1867 revealed a change in the attitude of the employers, especially the more influential of them, which marked an enormous advance on the debates of 1824 and 1825. . . . The investigation of the Commission of 1867–1869 were of a most searching character, and their results are contained in eleven reports. The Unions came well through the ordeal, and it was shown that the outrages had been confined to a few Unions, for the most part of minor importance. It further appeared that where no combination existed the relations between employers and hands were not more friendly, while the position of the workers was worse and in some cases quite desperate. The report led up to proposals for the legislation of Trade Unions, and to the legislation of 1871–1876, which was supported by many influential employers. The attitude of Parliament had changed with amazing rapidity. . . . The Trade Union Acts of 1871 and 1876 give all Unions, on condition that they register their rules, the same rights as were already enjoyed by the Friendly Societies in virtue of earlier legislation, i. e. the rights of legal personality. They can sue and be sued, possess real and personal estate, and can proceed summarily against their officers for fraudulent conduct. They also possess facilities for the transfer of investments to new trustees. The Act of 1871 was extended by that of 1876, framed expressly with the concurrence of the Trade Union leaders. . . . The working men, now that they are left to conduct their meetings in any way they choose, have gradually developed that sober and methodical procedure which amazes the Continental observer. . . . At Common Law, any action of Trade Unionists to raise wages seemed liable to punishment as conspiracy, on the ground that it was directed against the common weal. The course run by the actual prosecutions did, indeed, prevent this doctrine from ever receiving the sanction of a sentence expressly founded on it; but it gathered in ever heavier thunders over the heads of the Unions, and its very vagueness gave it the appearance of a deliberate persecution of one class of society in the interests of another. The Act of 1871 first brought within definite limits the extreme penalties that could be enforced against Trade Unionists either at Statute or Common Law. . . . By the Conspiracy and Protection of Property Act of 1875 the workmen's economic aims were at last recognised on precisely the same footing as those of other citizens."—G. von Schulze-Gaevernitz, *Social Peace, pp.* 86–102.

A. D. 1805-1827.—George Rapp and the Harmony Society.—Robert Owen and the Community at New Harmony.—The "Harmony Society" was first settled in Pennsylvania, on a tract of land about twenty five miles north of Pittsburgh, in 1805, by George Rapp, the leader of a religious congregation in Germany which suffered persecution there and sought greater freedom in America. From the beginning, they agreed "to throw all their possessions into a common fund, to adopt a uniform and simple dress and style of house; to keep thenceforth all things in common; and to labor for the common good of the whole body. . . . At this time they still lived in families, and encouraged, or at any rate did not discourage, marriage." But in 1807 they became persuaded that "it was best to cease to live in the married state. . . . Thenceforth no more marriages were contracted . . . , and no more children were born. A certain number of the younger people, feeling no vocation for a celibate life, at this time withdrew from the society." In 1814 and 1815 the society sold its property in Pennsylvania and removed to a new home in Posey County, Indiana, on the Wabash, where 30,000 acres of land were bought for it. The new settlement received the name of "Harmony." But this in its turn was sold, in 1824, to Robert Owen, for his New Lanark colony, which he planted there, under the name of the "New Harmony Community," and the Rappists returned eastward, to establish themselves at a lovely spot on the Ohio, where their well-known village called "Economy" was built. "Once it was a busy place, for it had cotton, silk, and woolen factories, a brewery, and other industries; but the most important of these have now [1874] ceased. . . . Its large factories are closed, for its people are too few to man them; and the members [numbering 110 in 1874, mostly aged] think it wiser and more comfortable for themselves to employ labor at a distance from their own town. They are pecuniarily interested in coal-mines, in saw-mills, and oil-wells; and they control manufactories at Beaver Falls—notably a cutlery shop. . . . The society is reported to be worth from two to three millions of dollars."—C. Nordhoff, *The Communistic Societies of the U. S., pp.* 63–91.—At the settlement in Indiana, "on the departure of the Rappites, persons favorable to Mr. Owen's views came flocking to New Harmony (as it was thenceforth called) from all parts of the country. Tidings of the new social experiment spread far and wide. . . . In the short space of six weeks from the commencement of the experiment, a population of 800 persons was drawn together, and in October 1825, the number had increased to 900." At the end of two years, in June, 1827, Mr. Owen seems to have given up the experiment and departed from New Harmony. "After his departure the majority of the population also removed and scattered about the country. Those who remained returned to individualism, and settled as farmers and mechanics in the ordinary way. One portion of the estate was owned by Mr. Owen, and the other by Mr. Maclure. They sold, rented, or gave away the houses and lands, and their heirs and assigns have continued to do so."—J. H. Noyes, *Hist. of American Socialisms, ch.* 4.

A. D. 1816-1886.—The modern Co-operative movement in England.—"The co-operative idea as applied to industry existed in the latter part of the last century. Ambelakia was almost a co-operative town, as may be read in David Urquhart's 'Turkey and its Resources.' So vast a municipal partnership of industry has never existed since. The fishers on the Cornish coast carried out co-operation on the sea, and the miners of Cumberland dug ore on the principle of sharing the profits. The plan has been productive of contentment and advantage. Gruyère is a co-operative cheese, being formerly made in the Jura mountains, where the profits were equitably divided among the makers. In 1777, as Dr. Langford relates in his 'Century of Birmingham Life,' the tailors of that enterprising town set up a co-operative workshop, which is the earliest in English record. In France an attempt was made by Babœuf in 1796, to establish a despotism of justice and equality by violence, after the manner of Richelieu, whose policy taught the French revolutionists that force might be a remedy. . . . Contemporaneous with the French revolutionists we had Shute Barrington, Bishop of Durham, who surpassed all other bishops in human sympathy and social sagacity. He established at Mongewell, in Oxfordshire, the first known co-operative store; and he, Count Rumford, and Sir Thomas Bernard published in 1795, and for many years after, plans of co-operative and social life, far exceeding in variety and thoroughness any in the minds of persons now living. 'The only apostle of the social state in England at the beginning of this century,' Harriet Martineau testifies, 'was Robert Owen,' and to him we owe the co-operation of to-day. With him it took the shape of a despotism of philanthropy. . . . The amazing arrangements Mr. Owen made at his New Lanark Mills for educating his workpeople, and the large amount of profit which he expended upon their personal comforts, have had no imitators except Godin of Guise, whose palaces of industry are to-day the wonder of all visitors. Owen, like Godin, knew how to make manufacturing generosity pay. . . . It was here that Mr. Owen set up a co-operative store on the primitive plan of buying goods and provisions wholesale and selling them to the workmen's families at cost price, he giving storerooms and paying for the management, to the greater advantage of the industrial purchasers. The benefit which the Lanark weavers enjoyed in being able to buy retail at wholesale prices was soon noised abroad, and clever workmen elsewhere began to form stores to supply their families in the same way. The earliest instance of this is the Economical Society of Sheerness, commenced in 1816, and which is still doing business in the same premises and also in adjacent ones lately erected. . . . These practical co-operative societies with economical objects gradually extended themselves over the land, Mr. Owen with splendid generosity, giving costly publicity to his successes, that others might profit likewise according to their means. His remarkable manufacturing gains set workmen thinking that they might do something in the same way. . . . The co-operative stores now changed their plan. They sold retail at shop charges, and saved the difference between retail and cost price as a fund with which to commence co-operative workshops. In 1830 from 300 to 400 co-operative stores had been set up in England. There are records of 250 existing, cited in the 'History of Co-operation in England.'. . . The Rochdale Society of 1844 was the first which adopted the principle of giving the shareholders 5 per cent. only, and dividing the remaining profit among the customers. There is a recorded instance of this being done in Huddersfield in 1827, but no practical effect arose, and no propagandism of the plan was attempted until the Rochdale co-operators devised the scheme of their own accord, and applied it. They began under the idea of saving money for community purposes and establishing co-operative workshops. For this purpose they advised their members to leave their savings in the store at 5 per cent. interest; and with a view to get secular education, of which there was little to be had in those days, and under the impression that stupidity was against them, they set apart 2½ per cent. of their profits for the purpose of instruction, education, and propagandism. By selling at retail prices they not only acquired funds, but they avoided the imputation of underselling their neighbours, which they had the good sense and good feeling to dislike. They intended to live, but their principle was 'to let live.' By encouraging members to save their dividends in order to accumulate capital, they taught them habits of thrift. By refusing to sell on credit they made no losses; they incurred no expenses in keeping books, and they taught the working classes around them, for the first time, to live without falling into debt. This scheme of equity, thrift, and education constitutes what is called the 'Rochdale plan.' . . . The subsequent development of co-operation has been greatly due to the interest which Professor Maurice, Canon Kingsley, Mr. Vansittart Neale, Mr. Thomas Hughes, and Mr. J. M. Ludlow took in it. They promoted successive improvements in the law which gave the stores legal protection, and enabled them to become bankers, to hold land, and allow their members to increase their savings to £200. . . . The members of co-operative societies of the Rochdale type now exceed 900,000, and receive more than 2½ millions of profit annually. There are 1,200 stores in operation, which do a business of nearly 30 millions a year, and own share capital of 8 millions. The transactions of their Co-operative Bank at Manchester amount to 16 millions annually. The societies devote to education £22,000 a year out of their profits, and many societies expend important sums for the same purpose, which is not formally recorded in their returns. In the twenty-five years from 1861 to 1886 the co-operators have done business of upwards of 361 millions, and have made for working people a profit of 30 millions. . . . Co-operation in other countries bears no comparison with its rise and progress in England. The French excel in co-operative workshops, the Germans in co-operative banks, England in the organisation of stores. No country has succeeded yet with all three. Italy excels even Germany in co-operative banks. It has, too, some remarkable distributive societies, selling commodities at cost prices, and is now beginning stores on the Rochdale plan. France has many distributive stores, and is likely to introduce the Rochdale type. . . . America . . . is likely to excel in industrial partnerships, and is introducing the English system of co-operation."—G. J.

Holyoake, *The Growth of Co-operation in England* (*Fortnightly Rev., August* 1, 1887).—The "Christian Socialism" which arose in England about 1850, under the influence of Frederick D. Maurice, Charles Kingsley, Thomas Hughes, identified itself practically with the co-operative movement.—R. T. Ely, *French and German Socialism, pp.* 249–251.

A. D. 1817-1825.—Saint Simon and Saint Simonism.—"Comte Henri de Saint-Simon, the founder of French socialism, was born at Paris in 1760. He belonged to a younger branch of the family of the celebrated duke of that name. His education, he tells us, was directed by D'Alembert. At the age of nineteen he went as volunteer to assist the American colonies in their revolt against Britain. . . . It was not till 1817 that he began, in a treatise entitled 'L'Industrie,' to propound his socialistic views, which he further developed in 'L'Organisateur' (1819), 'Du Système industriel' (1821), 'Catechisme des Industriels' (1823). The last and most important expression of his views is the 'Nouveau Christianisme' (1825). For many years before his death in 1825 Saint-Simon had been reduced to the greatest straits. He was obliged to accept a laborious post for a salary of £40 a year, to live on the generosity of a former valet, and finally to solicit a small pension from his family. In 1823 he attempted suicide in despair. It was not till very late in his career that he attached to himself a few ardent disciples. As a thinker Saint-Simon was entirely deficient in system, clearness, and consecutive strength. His writings are largely made up of a few ideas continually repeated. But his speculations are always ingenious and original; and he has unquestionably exercised great influence on modern thought, both as the historic founder of French socialism and as suggesting much of what was afterwards elaborated into Comtism. . . . His opinions were conditioned by the French Revolution and by the feudal and military system still prevalent in France. In opposition to the destructive liberalism of the Revolution he insisted on the necessity of a new and positive re-organisation of society. So far was he from advocating social revolt that he appealed to Louis XVIII. to inaugurate the new order of things. In opposition, however, to the feudal and military system, the former aspect of which had been strengthened by the Restoration, he advocated an arrangement by which the industrial chiefs should control society. In place of the Mediæval Church, the spiritual direction of society should fall to the men of science. What Saint-Simon desired, therefore, was an industrialist State directed by modern science. The men who are best fitted to organise society for productive labour are entitled to bear rule in it. The social aim is to produce things useful to life; the final end of social activity is 'the exploitation of the globe by association.' The contrast between labour and capital, so much emphasised by later socialism, is not present to Saint-Simon, but it is assumed that the industrial chiefs, to whom the control of production is to be committed, shall rule in the interest of society. Later on, the cause of the poor receives greater attention, till in his greatest work, 'The New Christianity,' it becomes the central point of his teaching, and takes the form of a religion. It was this religious development of his teaching that occasioned his final quarrel with Comte. Previous to the publication of the 'Nouveau Christianisme' Saint-Simon had not concerned himself with theology. Here he starts from a belief in God, and his object in the treatise is to reduce Christianity to its simple and essential elements. . . . During his lifetime the views of Saint-Simon had little influence, and he left only a very few devoted disciples, who continued to advocate the doctrines of their master, whom they revered as a prophet. . . . The school of Saint-Simon insists strongly on the claims of merit; they advocate a social hierarchy in which each man shall be placed according to his capacity and rewarded according to his works. This is, indeed, a most special and pronounced feature of the Saint-Simon Socialism, whose theory of government is a kind of spiritual or scientific autocracy. . . . With regard to the family and the relation of the sexes the school of Saint-Simon advocated the complete emancipation of woman and her entire equality with man."—T. Kirkup, *A History of Socialism, ch.* 2.

A. D. 1832-1847.—Fourier and Fourierism.—"Almost contemporaneously with St. Simon [see above: A. D. 1817–1825] another Frenchman, Charles Fourier, was elaborating a different and, in the opinion of Mill, a more workable scheme of social renovation on Socialistic lines. The work, indeed, in which Fourier's main ideas are embodied, called the 'Théorie des quatre Mouvements,' was published in 1808, long before St. Simon had given his views to the world, but it received no attention until after the discredit of the St. Simonian scheme, beginning in 1832. Association is the central word of Fourier's as of St. Simon's industrial system. Associated groups of from 1,600 to 2,000 persons are to cultivate a square league of ground called the Phalange, or phalanx; and are likewise to carry on all other kinds of industry which may be necessary. The individuals are to live together in one pile of buildings, called the Phalanstery, in order to economize in buildings, in domestic arrangements, cooking, etc., and to reduce distributors' profits; they may eat at a common table or not, as seems good to them: that is, they have life in common, and a good deal in each other's sight; they do not work in common more than is necessary under the existing system; and there is not a community of property. Neither private property, nor inheritance, is abolished. In the division of the produce of industry, after a minimum sufficient for bare subsistence has been assigned to each one, the surplus, deducting the capital necessary for future operations, is to be divided amongst the three great interests of Labour, Capital, and Talent, in the respective proportions of five-twelfths, four-twelfths, and three-twelfths. Individuals, according to their several tastes or aptitudes, may attach themselves to more than one of the numerous groups of labourers within each association. Every one must work; useless things will not be produced; parasitic or unnecessary work, such as the work of agents, distributors, middlemen generally, will not exist in the phalanstery; from all which the Fourierist argues that no one need work excessively. Nor need the work be disagreeable. On the contrary, Fourier has discovered the secret of

making labour attractive. Few kinds of labour are intrinsically disagreeable; and if any is unpleasant, it is mostly because it is monotonous or too long continued. On Fourier's plan the monotony will vanish, and none need work to excess. Even work regarded as intrinsically repugnant ceases to be so when it is not regarded as dishonourable, or when it absolutely must be done. But should it be thought otherwise, there is one way of compensating such work in the phalanstery — let those who perform it be paid higher than other workers, and let them vary it with work more agreeable, as they will have opportunity of doing in the new community."—W. Graham, *Socialism, New and Old, pp.* 98–100.— Fourier died in 1837. After his death the leadership of his disciples, who were still few in number, devolved upon M. Considérant, the editor of 'La Phalange,' a journal which had been started during the previous year for the advocacy of the doctrines of the school. "The activity of the disciples continued unabated. Every anniversary of the birthday of the founder they celebrated by a public dinner. In 1838 the number of guests was only 90; in the following year they had increased to 200; and they afterwards rose to more than 1,000. Every anniversary of his death they visited his grave at the cemetery of Montmartre, and decorated it with wreaths of immortelles. Upon these solemn occasions representatives assembled from all parts of the world, and testified by their presence to the faith they had embraced. In January, 1839, the Librairie Sociale, in the Rue de l' École de Medicine, was established, and the works of Fourier and his disciples, with those of other socialist writers, obtained a large circulation. . . . In 1840 'La Phalange,' began to appear, as a regular newspaper, three times a week. . . . Some of its principles began to exercise a powerful influence. Several newspapers in Paris, and throughout the country, demanded social revolution rather than political agitation. The cries of 'Organisation du Travail,' 'Droit au Travail,' that were now beginning to be heard so frequently in after-dinner toasts, and in the mouths of the populace, were traced back to Fourier. Cabet had already published his 'Voyage en Icarie'; Louis Blanc was writing in 'La Revue du Progrès,' and many other shades of socialism and communism were springing into existence, and eagerly competing for public favour. . . . M. Schneider communicated the theory to his countrymen in Germany, in 1837. The knowledge was farther extended in a series of newspaper articles by M. Gatzkow, in 1842; and separate works treating of the subject were subsequently published by M. Stein and M. Loose. In Spain, it found an active disciple in Don Joachin Abreu; and a plan for realisation was laid before the Regent by Don Manuel de Beloy. In England, Mr. Hugh Doherty was already advocating it in the 'Morning Star.' In 1841, his paper appeared with the new name of 'London Phalanx'; and it was announced that thousands of pounds, and thousands of acres, were at the disposal of the disciples. The Communists of the school of Owen received the new opinions favourably, and wished them every success in their undertaking. In America, Fourier soon obtained followers; the doctrine seems to have been introduced by M. Jean Manesca, who was the secretary of a phalansterian society, established in New York so early as 1838. In 1840, no less than 50 German families started from New York, under the leadership of MM. Gaertner and Hempel, both Fourierists, to establish a colony in Texas. They seem to have prospered for a time at least, for their numbers subsequently rose to 200,000. In October of the same year, the first number of the 'Phalanx' appeared at Buffalo, in New York State. Mr. Albert Brisbane, who had recently returned from Paris, had just published a work on the 'Social Destiny of Man,' which is, to a great extent, an abridgment of M. Considérant's 'Destinée Sociale.' He became the editor of the 'Future,' which replaced the 'Phalanx,' and was published at New York. This paper obtained but a small circulation, and Mr. Brisbane thought it advisable to discontinue it, and, in its stead, to purchase a column in the 'New York Tribune.' . . . When Mr. Brisbane began his propaganda, there was a 'Society of Friends of Progress' in existence in Boston. It included among its members some of the most eminent men in the intellectual capital of the New World. . . . A paper called the 'Dial' was started, to which Emerson, Parker, and Margaret Fuller contributed. Their object was to advocate a community upon the principles of Fourier, but so modified as to suit their own peculiar views. The result was the acquisition of Brook Farm. . . . But the influence of Mr. Brisbane was not limited to indirectly inspiring these eccentric experiments. It was said that in New York alone, in 1843, there were three newspapers reflecting the opinions of Fourier, and no less than forty throughout the rest of the States. Besides this, many reviews were occupied in discussing them. The first association in America to call itself a phalanx was Sylvania. It was begun in October, 1843, and lasted for about a year and a half. There were 150 members, and Mr. Horace Greeley's name appears among the list of its officers; it consisted of 2,300 acres in Pennsylvania. . . . There were thirty-four undertaken during the Fourier excitement, but of these we have complete statistics of only fourteen. . . . The years 1846–7 proved fatal to most of them. Indeed, Mr. Brisbane acknowledged in July, 1847, that only three then survived."— A. J. Booth, *Fourier* (*Fortnightly Rev., Dec.*, 1872). — "Horace Greeley, under date of July 1847, wrote to the 'People's Journal' the following. 'As to the Associationists (by their adversaries termed "Fourierites"), with whom I am proud to be numbered, their beginnings are yet too recent to justify me in asking for their history any considerable space in your columns. Briefly, however, the first that was heard in this country of Fourier and his views (beyond a little circle of perhaps a hundred persons in two or three of our large cities, who had picked up some notion of them in France or from French writings), was in 1840, when Albert Brisbane published his first synopsis of Fourier's theory of industrial and household Association. Since then the subject has been considerably discussed, and several attempts of some sort have been made to actualize Fourier's ideas, generally by men destitute alike of capacity, public confidence, energy and means. In only one instance that I have heard of was the land paid for on which the enterprise commenced; not one of these vaunted "Fourier Associations" ever had the means of erecting a proper dwelling for so

many as three hundred people, even if the land had been given them. Of course the time for paying the first installment on the mortgage covering their land has generally witnessed the dissipation of their sanguine dreams. Yet there are at least three of these embryo Associations still in existence; and, as each of these is in its third or fourth year, they may be supposed to give some promise of vitality. They are the North American Phalanx, near Leedsville, New Jersey; the Trumbull Phalanx, near Braceville, Ohio; and the Wisconsin Phalanx, Ceresco, Wisconsin. Each of these has a considerable domain nearly or wholly paid for, is improving the soil, increasing its annual products, and establishing some branches of manufactures. Each, though far enough from being a perfect Association, is animated with the hope of becoming one, as rapidly as experience, time and means will allow.' Of the three Phalanxes thus mentioned as the rear-guard of Fourierism, one — the Trumbull—disappeared about four months afterward (very nearly at the time of the dispersion of Brook Farm), and another — the Wisconsin — lasted only a year longer, leaving the North American alone for the last four years of its existence."—J. H. Noyes, *History of American Socialisms, ch.* 40.

A. D. 1839-1894.—Proudhon and his doctrines of Anarchism.—The Individualistic and Communistic Anarchists of the present generation.—"Of the Socialistic thinkers who serve as a kind of link between the Utopists and the school of the Socialism of historical evolution, or scientific Socialists, by far the most noteworthy figure is Proudhon, who was born at Besançon in 1809. By birth he belonged to the working class, his father being a brewer's cooper, and he himself as a youth followed the occupation of cowherding. In 1838, however, he published an essay on general grammar, and in 1839 he gained a scholarship to be held for three years, a gift of one Madame Suard to his native town. The result of this advantage was his most important though far from his most voluminous work, published the same year as the essay which Madame Suard's scholars were bound to write: it bore the title of 'What is Property?' (Qu' est-ce que la propriété?) his answer being Property is Robbery (La propriété est le vol). As may be imagined, this remarkable essay caused much stir and indignation, and Proudhon was censured by the Besançon Academy for its production, narrowly escaping a prosecution. In 1841 he was tried at Besançon for a letter he wrote to Victor Considérant, the Fourierist, but was acquitted. In 1846 he wrote his 'Philosophie de la Misère' (Philosophy of Poverty), which received an elaborate reply and refutation from Karl Marx. In 1847 he went to Paris. In the Revolution of 1848 he showed himself a vigorous controversialist, and was elected Deputy for the Seine. . . . After the failure of the revolution of '48, Proudhon was imprisoned for three years, during which time he married a young woman of the working class. In 1858 he fully developed his system of 'Mutualism' in his last work, entitled 'Justice in the Revolution and the Church.' In consequence of the publication of this book he had to retire to Brussels, but was amnestied in 1860, came back to France and died at Passy in 1865."—W. Morris and E. B. Bax, *Socialism, its Growth and Outcome, ch.* 18.—"In anarchism we have the extreme antithesis of socialism and communism. The socialist desires so to extend the sphere of the state that it shall embrace all the more important concerns of life. The communist, at least of the older school, would make the sway of authority and the routine which follows therefrom universal. The anarchist, on the other hand, would banish all forms of authority and have only a system of the most perfect liberty. The anarchist is an extreme individualist. . . . Anarchism, as a social theory, was first elaborately formulated by Proudhon. In the first part of his work, 'What is Property?' he briefly stated the doctrine and gave it the name 'anarchy,' absence of a master or sovereign. In that connection he said: 'In a given society the authority of man over man is inversely proportional to the stage of intellectual development which that society has reached. . . . Property and royalty have been crumbling to pieces ever since the world began. As man seeks justice in equality, so society seeks order in anarchy.' About twelve years before Proudhon published his views Josiah Warren reached similar conclusions in America. But as the Frenchman possessed the originality necessary to the construction of a social philosophy, we must regard him as altogether the chief authority upon scientific anarchism. . . . Proudhon's social ideal was that of perfect individual liberty. Those who have thought him a communist or socialist have wholly mistaken his meaning. . . . Proudhon believed that if the state in all its departments were abolished, if authority were eradicated from society, and if the principle of laissez faire were made universal in its operation, every form of social ill would disappear. According to his views men are wicked and ignorant because, either directly or indirectly, they have been forced to be so: it is because they have been subjected to the will of another, or are able to transfer the evil results of their acts to another. If the individual, after reaching the age of discretion, could be freed from repression and compulsion in every form and know that he alone is responsible for his acts and must bear their consequences, he would become thrifty, prudent, energetic; in short he would always see and follow his highest interests. He would always respect the rights of others; that is, act justly. Such individuals could carry on all the great industrial enterprises of to-day either separately or by voluntary association. No compulsion, however, could be used to force one to fulfil a contract or remain in an association longer than his interest dictated. Thus we should have a perfectly free play of enlightened self-interests: equitable competition, the only natural form of social organization. . . . Proudhon's theory is the sum and substance of scientific anarchism. How closely have the American anarchists adhered to the teachings of their master? One group, with its centre at Boston and with branch associations in a few other cities, is composed of faithful disciples of Proudhon. They believe that he is the leading thinker among those who have found the source of evil in society and the remedy therefor. They accept his analysis of social phenomena and follow his lead generally, though not implicitly. They call themselves Individualistic Anarchists, and claim to

be the only class who are entitled to that name. They do not attempt to organize very much, but rely upon 'active individuals, working here and there all over the country.' It is supposed that they may number in all some five thousand adherents in the United States. . . . They, like Proudhon, consider the government of the United States to be as oppressive and worthless as any of the European monarchies. Liberty prevails here no more than there. In some respects the system of majority rule is more obnoxious than that of monarchy. It is quite as tyrannical, and in a republic it is more difficult to reach the source of the despotism and remove it. They regard the entire machinery of elections as worthless and a hindrance to prosperity. They are opposed to political machines of all kinds. They never vote or perform the duties of citizens in any way, if it can be avoided. . . . Concerning the family relation, the anarchists believe that civil marriage should be abolished and 'autonomistic' marriage substituted. This means that the contracting parties should agree to live together as long as it seems best to do so, and that the partnership should be dissolved whenever either one desires it. Still, they would give the freest possible play to love and honor as restraining motives. . . . The Individualistic Anarchists . . . profess to have very little in common with the Internationalists. The latter are Communistic Anarchists. They borrow their analysis of existing social conditions from Marx, or more accurately from the 'communistic manifesto' issued by Marx and Engels in 1847. In the old International Workingman's association they constituted the left wing, which, with its leader, Bakunine, was expelled in 1872. Later the followers of Marx, the socialists proper, disbanded, and since 1883 the International in this country has been controlled wholly by the anarchists. Their views and methods are similar to those which Bakunine wished to carry out by means of his Universal Alliance, and which exist more or less definitely in the minds of Russian Nihilists. Like Bakunine, they desire to organize an international revolutionary movement of the laboring classes, to maintain it by means of conspiracy and, as soon as possible, to bring about a general insurrection. In this way, with the help of explosives, poisons and murderous weapons of all kinds, they hope to destroy all existing institutions, ecclesiastical, civil and economic. Upon the smoking ruins they will erect the new and perfect society. Only a few weeks or months will be necessary to make the transition. During that time the laborers will take possession of all lands, buildings, instruments of production and distribution. With these in their possession, and without the interposition of government, they will organize into associations or groups for the purpose of carrying on the work of society."—H. L. Osgood, *Scientific Anarchism* (*Political Science Quarterly, March*, 1889).

Also in: F. Dubois, *The Anarchist Peril.*

A. D. 1840-1848.—Louis Blanc and his scheme of State-aided Co-operation.—"St. Simonism would destroy individual liberty, would weight the State with endless responsibilities, and the whole details of production, distribution, and transportation. It would besides be a despotism if it could be carried out, and not a beneficent despotism, considering the weakness and imperfection of men. So objected Louis Blanc to St. Simonism, in his 'Organisation du Travail' (1840), whilst bringing forward a scheme of his own, which, he contends, would be at once simple, immediately applicable, and of indefinite extensibility; in fact a full and final solution of the Social Problem. The large system of production, the large factory and workshop, he saw was necessary. Large capital, too, was necessary, but the large capitalist was not. On the contrary, capitalism — capital in the hands of private individuals, with, as a necessary consequence, unbounded competition, was ruinous for the working classes, and not good for the middle classes, including the capitalists themselves, because the larger capitalists, if sufficiently astute or unscrupulous, can destroy the smaller ones by under-selling, as in fact they constantly did. His own scheme was what is now called co-operative production, with the difference that instead of voluntary effort, he looked to the State to give it its first motion, by advancing the capital without interest, by drawing up the necessary regulations, and by naming the hierarchy of workers for one year, after which the co-operative groups were to elect their own officers. He thought that if a number of these co-operative associations were thus launched State-aided in each of the greater provinces of industry, they could compete successfully with the private capitalist, and would beat him within no very long time. By competition he trusted to drive him out in a moderate time, and without shock to industry in general. But having conquered the capitalist by competition, he wished competition to cease between the different associations in any given industry; as he expressed it, he would 'avail himself of the arm of competition to destroy competition.' . . . The net proceeds each year would be divided into three parts: the first to be divided equally amongst the members of the association; the second to be devoted partly to the support of the old, the sick, the infirm, partly to the alleviation of crises which would weigh on other industries; the third to furnish 'instruments of labour' to those who might wish to join the association. . . . Capitalists would be invited into the associations, and would receive the current rate of interest at least, which interest would be guaranteed to them out of the national budget; but they would only participate in the net surplus in the character of workers. . . . Such was the scheme of Louis Blanc, which, in 1848, when member of the Provisional Government in France, he had the opportunity, rarely granted to the social system-maker, of partially trying in practice. He was allowed to establish a number of associations of working men by the aid of Government subsidies. The result did not realize expectations. After a longer or shorter period of struggling, every one of the associations failed; while, on the other hand, a number of co-operative associations founded by the workmen's own capital, as also some industrial partnerships founded by capitalists, on Louis Blanc's principle of distribution of the net proceeds, were successful. . . . I do not refer to the 'ateliers nationaux,' [see France: A. D. 1848] which were not countenanced by Louis Blanc; but to certain associations of working men who received advances from the Government on the principle advocated in his book. There were not many of these at first. L. Blanc congratulated himself on being able

to start a few: after the second rising the Government subsidized fifty-six associations, all but one of which had failed by 1875."—W. Graham, *Socialism, New and Old, ch. 3, sect. 5, with foot-note.*—"In 1848 the Constituent Assembly voted, in July, that is, after the revolution of June, a subsidy of three millions of francs in order to encourage the formation of working men's associations. Six hundred applications, half coming from Paris alone, were made to the commission entrusted with the distribution of the funds, of which only fifty-six were accepted. In Paris, thirty associations, twenty-seven of which were composed of working men, comprising in all 434 associates, received 890,500 francs. Within six months, three of the Parisian associations failed; and of the 434 associates, seventy-four resigned, fifteen were excluded, and there were eleven changes of managers. In July, 1851, eighteen associations had ceased to exist. One year later, twelve others had vanished. In 1865 four were still extant, and had been more or less successful. In 1875 there was but a single one left, that of the file-cutters, which, as Citizen Finance remarked, was unrepresented at the Congress."—E. de Laveleye, *The Socialism of To-day, ch. 5, foot-note.*

Also in: L. Blanc, 1848: *Historical Revelations, ch. 5–9, and 19.*

A. D. 1840-1883.—Icaria.—In 1840, Étienne Cabet published in France an Utopian romance, the "Voyage en Icarie," which awakened remarkable interest, very quickly. He described in this romance an ideal community, and eight years later, having continued the propagation of his social theories in the meantime, he undertook to carry them into practice. A tract of land was secured in Texas, and in February, 1848, sixty-nine emigrants—the advance guard of what promised to be a great army of Icarians—set sail from Havre for New Orleans. They were followed during the year by others—a few hundreds in all; but even before the later comers reached New Orleans the pioneers of the movement had abandoned their Texas lands, disappointed in all their expectations and finding themselves utterly unprepared for the work they had to do, the expenditures they had to make, and the hardships they had to endure. They retreated to New Orleans and were joined there by Cabet. It happened that the Mormons, at this time, were deserting their town of Nauvoo, in Illinois, and were making their hejira to Salt Lake City. Cabet struck a bargain with the retreating disciples of Joseph Smith, which gave his community a home ready-made. The followers who adhered to him were conveyed to Nauvoo in the spring; but two hundred more gave up the socialistic experiment, and either remained at New Orleans or returned to France. For a few years the colony was fairly prosperous at Nauvoo. Good schools were maintained. "Careful training in manners and morals, and in Icarian principles and precepts, is work with which the schools are especially charged. The printing office is a place of great activity. Newspapers are printed in English, French and German. Icarian school-books are published. . . . A library of 5,000 or 6,000 volumes, chiefly standard French works, seems to be much patronized. . . . Frequent theatrical entertainments, social dances, and lectures are common means of diversion. . . . These families . . . are far from the condition of the happy Icarians of the 'Voyage,' but considering the difficulties they have encountered they must be accredited with having done remarkably well." Dissensions arose however. In 1856 Cabet found himself opposed by a majority of the community. In November of that year he withdrew, with about 180 adherents, and went to St. Louis, where he died suddenly, a few days after his arrival. Those who had accompanied him settled themselves upon an estate called Cheltenham, six miles west of St. Louis; but they did not prosper, and were dispossessed, by the foreclosure of a mortgage, in 1864, and the last of the community was dispersed. The section left at Nauvoo held no title to lands there, after Cabet separated from them, and were forced to remove in 1860. They established themselves on a tract of land in Adams county, southwestern Iowa, and there Icaria, in a slender and modest form, has been maintained, through many vicissitudes, to the present day. A new secession, occurring 1879–83, sent forth a young colony which settled at Cloverdale, California, and took the name of the Icaria-Speranza Community, borrowing the name "Speranza" from another Utopian romance by Pierre Leroux.—A. Shaw, *Icaria.*

A. D. 1841-1847.—Brook Farm.—On the 29th day of September, 1841, articles of association were made and executed which gave existence to an Association bearing the name and style of "The Subscribers to the Brook Farm Institute of Agriculture and Education." By the second of these articles, it was declared to be the object of the Association "to purchase such estates as may be required for the establishment and continuance of an agricultural, literary, and scientific school or college, to provide such lands and houses, animals, libraries and apparatus, as may be found expedient or advantageous to the main purpose of the Association." By article six, "the Association guarantees to each shareholder the interest of five per cent. annually on the amount of stock held by him in the Association." By article seven, "the shareholders on their part, for themselves, their heirs and assigns, do renounce all claim on any profits accruing to the Association for the use of their capital invested in the stock of the Association, except five per cent. interest on the amount of stock held by them." By article eight it was provided that "every subscriber may receive the tuition of one pupil for every share held by him, instead of five per cent. interest." The subscribers to these Articles, for shares ranging in amount from $500 to $1,500, were George Ripley, Nathaniel Hawthorne, Minot Pratt, Charles A. Dana, William B. Allen, Sophia W. Ripley, Maria T. Pratt, Sarah F. Stearns, Marianne Ripley, and Charles O. Whitmore. "The 'Brook Farm Association for Education and Agriculture' was put in motion in the spring of 1841. There was no difficulty in collecting a company of men and women large enough to make a beginning. One third of the subscriptions was actually paid in, Mr. Ripley pledging his library for four hundred dollars of his amount. With the sum subscribed a farm of a little less than two hundred acres was bought for ten thousand five hundred dollars, in West Roxbury, about nine miles from Boston. The site was a pleasant one, not far from Theodore Parker's meeting-house in Spring Street, and in close vicinity to some of the most

wealthy, capable, and zealous friends of the enterprise. It was charmingly diversified with hill and hollow, meadow and upland. . . . Later experience showed its unfitness for lucrative tillage, but for an institute of education, a semi-æsthetic, humane undertaking, nothing could be better. This is the place to say, once for all, with the utmost possible emphasis, that Brook Farm was not a 'community' in the usual sense of the term. There was no element of 'socialism' in it. There was about it no savor of antinomianism, no taint of pessimism, no aroma, however faint, of nihilism. It was wholly unlike any of the 'religious' associations which had been established in generations before, or any of the atheistic or mechanical arrangements which were attempted simultaneously or afterwards. . . . The institution of Brook Farm, though far from being 'religious' in the usual sense of the word, was enthusiastically religious in spirit and purpose. . . . There was no theological creed, no ecclesiastical form, no inquisition into opinions, no avowed reliance on superhuman aid. The thoughts of all were heartily respected; and while some listened with sympathy to Theodore Parker, others went to church nowhere, or sought the privileges of their own communion. . . . A sympathizing critic published in the 'Dial' (January, 1842) an account of the enterprise as it then appeared: . . . 'They have bought a farm in order to make agriculture the basis of their life, it being the most direct and simple in relation to nature. . . . The plan of the Community, as an economy, is, in brief, this: for all who have property to take stock, and receive a fixed interest thereon; then to keep house or board in common, as they shall severally desire, at the cost of provisions purchased at wholesale, or raised on the farm; and for all to labor in community and be paid at a certain rate an hour, choosing their own number of hours and their own kind of work. With the results of this labor and their interest they are to pay their board, and also purchase whatever else they require, at cost, at the warehouses of the community, which are to be filled by the community as such. To perfect this economy, in the course of time they must have all trades and all modes of business carried on among themselves, from the lowest mechanical trade which contributes to the health and comfort of life, to the finest art which adorns it with food or drapery for the mind. All labor, whether bodily or intellectual, is to be paid at the same rate of wages, on the principle that, as the labor becomes merely bodily, it is a greater sacrifice to the individual laborer to give his time to it.' . . . The daily life at Brook Farm was, of course, extremely simple, even homely. . . . There was at no time too much room for the one hundred and fifty inmates. . . . The highest moral refinement prevailed in all departments. In the morning, every species of industrial activity went on. In the afternoon, the laborers changed their garments and became teachers, often of abstruse branches of knowledge. The evenings were devoted to such recreations as suited the taste of the individual. The farm was never thoroughly tilled, from the want of sufficient hands. A good deal of hay was raised, and milk was produced from a dozen cows. . . . Some worked all day in the field, some only a few hours, some none at all, being otherwise employed, or by some reason disqualified. The most cultivated worked the hardest. . . . The serious difficulties were financial. . . . As early as 1843 the wisdom of making changes in the direction of scientific arrangement was agitated; in the first months of 1844 the reformation was seriously begun," and the model of the new organization was Fourier's "Phalanx." "The most powerful instrument in the conversion of Brook Farm was Mr. Albert Brisbane. He had studied the system [of Fourier] in France, and made it his business to introduce it here. . . . In March, 1845, the Brook Farm Phalanx was incorporated by the Legislature of Massachusetts. The Constitution breathes a spirit of hope which is pathetic at this distance of time. . . . The publication of the Constitution was followed in the summer by 'The Harbinger,' which became the leading journal of Fourierism in the country. The first number appeared on June 14th. . . . Its list of contributors was about the most remarkable ever presented. Besides Ripley, Dwight, Dana, and Rykman, of Brook Farm, there were Brisbane, Channing, Curtis [George W., who had lived at Brook Farm for two years], Cranch, Godwin, Greeley, Lowell, Whittier, Story, Higginson, to say nothing of gentlemen less known. . . . 'The Harbinger' lived nearly four years, a little more than two at Brook Farm, less than two in New York. The last number was issued on the 10th of February, 1849. . . . It is unnecessary to speculate on the causes of the failure at Brook Farm. There was every reason why it should fail; there was no earthly, however much heavenly reason there may have been, why it should succeed." In August, 1847, a meeting of stockholders and creditors authorized the transfer of the property of the Brook Farm Phalanx to a board of three trustees, "for the purpose and with the power of disposing of it to the best advantage of all concerned." And so the most attractive of all social experiments came to an end.—O. B. Frothingham, *George Ripley, ch.* 3–4.

A. D. 1842-1889.—Profit-sharing experiments.—"Profit sharing was first practised systematically by M. Leclaire, a Parisian house-painter and decorator. Beginning to admit his workmen to participation in the profits of his business in 1842, he continued the system, with modifications and developments, until his death in 1872. His financial success was signal. It was not due to mere good fortune. Leclaire was a man of high business capacity. . . . In France, the increase in the number of participating firms, from 1855 onwards, has been comparatively steady, the number now [1889] standing between 55 and 60. In Switzerland, the 10 instances, dating ten years back or more, have no followers recorded in the sources of information open to me. This fact may be explained in some degree by the circumstances that Dr. Böhmert's work, the chief authority thus far on this subject, was published in 1878, and that the principal investigations since that time have been concerned mainly with France, England, and the United States. This remark will apply to Germany also; but the prevalence there of socialism has probably been an important reason for the small and slow increase in the number of firms making a trial of the system of participation. . . . In England, the abandonment of their noted trials of industrial partnership by the

Messrs. Briggs and by Fox, Head and Co. in 1874 checked the advance of the scheme to a more general trial; but in the last five years, 7 houses have entered upon the plan. In the United States, the experience of the Messrs. Brewster and Co. exerted a similar influence, but by 1882 6 concerns had introduced profit sharing; these were followed by 11 in 1886, and in 1887 by 12 others. There are, then, at least 29 cases of profit sharing in actual operation at this time [1889] in this country, which began in 1887, 1886, or 1882. As compared with France, Germany, and Switzerland, the United States show a smaller number of cases of long standing, and a considerably larger number of instances of adoption of the system in the last three years [1887–1889]. . . . Not by mere chance, apparently, the two republics of France and the United States show the longest lists of profit sharing firms."—N. P. Gilman, *Profit Sharing, ch.* 9.—See, also, below: 1859–1887—the profit-sharing experiment of M. Godin, at Guise, in France.

A. D. 1843-1874.—Ebenezer and Amana, the communities of the "True Inspiration Congregations."—In 1843 the first detachment of a company of immigrants, belonging to a sect called the "True Inspiration Congregations" which had existed in Germany for more than a century, was brought to America and settled on a tract of land in Western New York, near the city of Buffalo. Others followed, until more than a thousand persons were gathered in the community which they called "Ebenezer." They were a thrifty, industrious, pious people, who believed that their leader, Christian Metz, and some others, were "inspired instruments," through whom Divine messages came to them. These messages have all been carefully preserved and printed. Communism appears to have been no part of their religious doctrine, but practically forced upon them, as affording the only condition under which they could dwell simply and piously together. In 1854 they were "commanded by inspiration" to remove to the West. Their land at Ebenezer was advantageously sold, having been reached by the widening boundaries of Buffalo, and they purchased a large tract in Iowa. The removal was accomplished gradually during the next ten years, and in their new settlement, comprising seven villages, with the common name, Amana, the community is said to be remarkably thriving. In 1874 Amana contained a population of 1,485 men, women and children.—C. Nordhoff, *The Communistic Societies of the United States, pp.* 25–43.

A. D. 1843-1883.—Karl Marx.—His theory of Capital.—His socialistic influence.—"The greatest and most influential name in the history of socialism is unquestionably Karl Marx. . . . Like Ferdinand Lassalle, he was of Jewish extraction. He was born at Treves in 1818, his father being a lawyer in that town; and he studied at Berlin and Bonn, but neglected the specialty of law, which he nominally adopted, for the more congenial subjects of philosophy and history. Marx was a zealous student, and apparently an adherent of Hegelianism, but soon gave up his intention of following an academic career as a teacher of philosophy, and joined the staff of the Rhenish Gazette, published at Cologne as an organ of the extreme democracy. While thus engaged, however, he found that his knowledge of economics required to be enlarged and corrected, and accordingly in 1843, after marrying the sister of the Prussian Minister, Von Westfalen, he removed to Paris, where he applied himself to the study of the questions to which his life and activity were henceforward to be devoted so entirely. Here also he began to publish those youthful writings which must be reckoned among the most powerful expositions of the early form of German socialism. With Arnold Ruge he edited the 'Deutsch-Französische Jahrbücher.' In 1845 he was expelled from Paris and settled in Brussels, where he published his 'Discours sur le Libre Échange,' and his criticism of Proudhon's 'Philosophie de la Misère,' entitled, 'Misère de la Philosophie.' In Paris he had already met Friedrich Engels, who was destined to be his lifelong and loyal friend and companion-in-arms, and who in 1845 published his important work, 'The Condition of the Working Class in England.' The two friends found that they had arrived at a complete identity of opinion; and an opportunity soon occurred for an emphatic expression of their common views. A society of socialists, a kind of forerunner of the International, had established itself in London, and had been attracted by the new theories of Marx and the spirit of strong and uncompromising conviction with which he advocated them. They entered into relation with Marx and Engels; the society was re-organised under the name of the Communist League; and a congress was held, which resulted (1847) in the framing of the 'Manifesto of the Communist Party,' which was published in most of the languages of Western Europe, and is the first proclamation of that revolutionary socialism armed with all the learning of the nineteenth century, but expressed with the fire and energy of the agitator, which in the International and other movements has so startled the world. During the revolutionary troubles in 1848 Marx returned to Germany, and along with his comrades, Engels, Wolff, &c., he supported the most advanced democracy in the 'New Rhenish Gazette.' In 1849 he settled in London, where he spent his after-life in the elaboration of his economic views and in the realisation of his revolutionary programme. During this period he published 'Zur Kritik der politischen Oekonomie' (1859), and the first volume of his great work on capital, 'Das Kapital' (1867). He died in London, March 14, 1883."—T. Kirkup, *A History of Socialism, ch.* 7.—"As to the collectivist creed, Marx looks upon history as ruled by material interests. He borrows from Hegel the idea of development in history, and sees in the progress of civilization merely the development of economic production, which involves a conflict of classes. The older socialists were idealists, and constructed a perfect social system. Marx simply studies economic changes, and their effects on the conflict of classes, as a basis for predicting the future. Starting from the principle that there are no permanent economic laws, but merely transitory phases, a principle denied by the modern French economists, he does not criticise but explains our modern capitalistic industrial system, and its effects on society. Formerly, says Engels, an artisan owned his tools and also the product of his labor. If he chose to employ wage earners, these were merely apprentices, and worked not so much for wages, but in order to learn the trade. All this is changed by

the introduction of capital and the modern industrial system. Marx explains the origin of capital by saying that it was formerly the result of conquest, the pillage of peasants, and of colonies, and the secularization of church property. However, he does not hold the present capitalists to be robbers. He does not deal with the capitalist but with capital. His primary theory then is that profit on capital, on which the possibility of accumulating wealth depends, is due to the fact that the laborer does not receive the entire product of his labor as his reward, but that the capitalist takes the lion's share. Under the old industrial system, the laborer's tools, his means of production, belonged to him. Now they are owned by the capitalist. Owing to the improvement of machinery, and the invention of steam-power, the laborer can no longer apply his energy in such a way as to be fully remunerated. He now must sell his muscular energy in the market. The capitalist who buys it offers him no just reward. He gives the laborers only a part of the product of his labors, pocketing the remainder as interest on capital, and returns for risks incurred. The laborer is cheated out of the difference between his wages and the full product of his labor, while the capitalist's share is increased, day by day, by this stolen amount. 'Production by all, distribution among a few.' This is the gist of Marx's theories. Capital is not the result of intelligent savings. It is simply an amount of wealth appropriated by the capitalist from the laborer's share in his product."—J. Bourdeau, *German Socialism* (*N. Englander and Yale Rev., Sept.*, 1891, *tr. from Revue des Deux Mondes*).—"The principal lever of Marx against the present form of industry, and of the distribution of its results, is the doctrine that value — that is, value in exchange — is created by labor alone. Now this value, as ascertained by exchanges in the market or measured by some standard, does not actually all go to the laborer, in the shape of wages. Perhaps a certain number of yards of cotton cloth, for instance, when sold, actually pay for the wages of laborers and leave a surplus, which the employer appropriates. Perhaps six hours of labor per diem might enable the laborer to create products enough to support himself and to rear up an average family; but at present he has to work ten hours for his subsistence. Where do the results of the four additional hours go? To the employer, and the capitalist from whom the employer borrows money; or to the employer who also is a capitalist and invests his capital in his works, with a view to a future return. The laborer works, and brings new workmen into the world, who in turn do the same. The tendency of wages being toward an amount just sufficient for the maintenance of the labor, there is no hope for the future class of laborers. Nor can competition or concurrence help the matter. A concurrence of capitalists will tend to reduce wages to the minimum, if other conditions remain as they were before. A concurrence of laborers may raise wages above the living point for a while; but these fall again, through the stimulus which high wages give to the increase of population. A general fall of profits may lower the price of articles used by laborers; but the effect of this is not to add in the end to the laborer's share. He can live at less expense, it is true, but he will need and will get lower wages. Thus the system of labor and capital is a system of robbery. The capitalist is an 'expropriator' who must be expropriated, as Marx expresses it. A just system can never exist as long as wages are determined by free contract between laborers and employers; that is, as long as the means of carrying on production are in private hands. The only cure for the evils of the present industrial system is the destruction of private property — so far, at least, as it is used in production; and the substitution of the state, or of bodies or districts controlled by the state, for the private owner of the means of production. Instead of a number of classes in society, especially instead of a bourgeoisie and a proletariat, there must be but one class, which works directly or indirectly for the state, and receives as wages what the state decides to give to them. The state, it is taken for granted, will give in return for hours of labor as much as can be afforded, consistently with the interests of future labor and with the expenses necessary for carrying on the state system itself."—T. D. Woolsey, *Communism and Socialism*, *pp.* 162–163.

A. D. 1848.—The founding of the Oneida Community. — The Oneida and Wallingford communities of Perfectionists are followers of doctrines taught by one John Humphrey Noyes, a native of Vermont, who began his preaching at Putney, in that state, about 1834. The community at Oneida, in Madison county, New York, was formed in 1848, and had a struggling existence for many years; but gradually several branches of industry, such as the making of traps, travelling bags, and the like, were successfully established, and the community became prosperous. Everything is owned in common, and they extend the community system "beyond property to persons." That is to say, there is no marriage among them, and "exclusiveness in regard to women and children" is displaced by what they claim to be a scientific regulation of the intercourse of the sexes. In the early years of the Oneida Community several other settlements of the followers of Noyes were attempted; but one at Wallingford, Connecticut, is the only survivor. — C. Nordhoff, *The Communistic Societies of the U. S.*, *pp.* 259–293.

A. D. 1848-1883. — Schulze-Delitzsch and the Co-operative movement in Germany.—"Hermann Schulze was born at Delitzsch, in Prussian Saxony, August 29th, 1808. He studied jurisprudence at Leipzig and Halle, and afterwards occupied judicial posts under the Government, becoming District Judge at Delitzsch in 1841, a position which he held until 1850. In 1848, he was elected to the Prussian National Assembly, and the following year he became a member of the Second Chamber, in which he sat as Schulze-Delitzsch, a name which has since adhered to him. Being a member of the Progressist party, he proved a thorn in the Government's flesh, and he was made District Judge at Wreschen, but he returned later to the Prussian Diet, and became also a member of the North German and German Reichstags. For more than thirty years Schulze headed the co-operative movement in Germany, but his self-sacrifice impoverished him, and although his motto as a

social reformer had always been 'Self-help,' as opposed to Lassalle's 'State-help,' he was compelled in his declining years to accept a gift of £7,000 from his friends. Schulze died honoured if not famous on April 29th, 1883. Schulze-Delitzsch is the father of the co-operative movement in Germany. He had watched the development of this movement in England, and as early as 1848 he had lifted up his voice in espousal of co-operative principles in his own country. Though a Radical, Schulze was no Socialist, and he believed co-operation to be a powerful weapon wherewith to withstand the steady advance of Socialistic doctrines in Germany. Besides carrying on agitation by means of platform-speaking, he published various works on the subject, the chief of which are: 'Die arbeitenden Klassen und das Associationswesen in Deutschland, als Programm zu einem deutschen Congress,' (Leipzig, 1858); 'Kapitel zu einem deutschen Arbeitercatechismus,' (Leipzig, 1863); 'Die Abschaffung des geschäftlichen Risico durch Herrn Lassalle,' (Berlin, 1865); 'Die Entwickelung des Genossenschaften in einzelnen Gewerbszweigen,' (Leipzig, 1873). Schulze advocated the application of the co-operative principle to other organisations than the English stores, and especially to loan, raw material, and industrial associations. He made a practical beginning at his own home and the adjacent town of Eilenburg, where in 1849 he established two co-operative associations of shoemakers and joiners, the object of which was the purchase and supply to members of raw material at cost price. In 1850 he formed a Loan Association (Vorschussverein) at Delitzsch on the principle of monthly payments, and in the following year a similar association on a larger scale at Eilenburg. For a long time Schulze had the field of agitation to himself, and the consequence was that the more intelligent sections of the working classes took to his proposals readily. Another reason for his success, however, was the fact that the movement was practical and entirely unpolitical. It was a movement from which the Socialistic element was absent, and one in which, therefore, the moneyed classes could safely co-operate. Schulze, in fact, sought to introduce reforms social rather than Socialistic. The fault of his scheme as a regenerative agency was that it did not affect the masses of the people, and thus the roots of the social question were not touched. Schulze could only look for any considerable support to small tradesmen and artisans, to those who were really able to help themselves if shown the way. But his motto of 'Self-help' was an unmeaning gospel to the vast class of people who were not in this happy position. . . . The movement neared a turning point in 1858. In that year Schulze identified himself with the capitalist party at a Congress of German economists, held at Gotha, and he soon began to lose favour with the popular classes. The high-water mark was reached in 1860, at which time the co-operative associations had a membership of 200,000, and the business done amounted to 40,000,000 thalers or about £6,000,000; the capital raised by contribution or loan approaching a third of this sum. In the year 1864 no fewer than 800 Loan and Credit Associations had been established, while in 1861 the number of Raw Material and Productive Associations was 172, and that of Co-operative Stores 66. Possibly the movement might have continued to prosper, even though Schulze was suspected of sympathy with the capitalists, had no rival appeared on the scene. But a rival did appear, and he was none other than Lassalle."— W. H. Dawson, *German Socialism and Ferdinand Lassalle, ch.* 7.— The co-operative societies in Germany on the Schulze-Delitzsch plan have been regularly organized into an association. "The number of societies in this association increased from 171 in 1859, to 771 in 1864, and was 3,822 in 1885. At the last named date they were distributed thus: loan and credit societies, 1,965; co-operative societies in various branches of trade, 1,146; co-operative store societies, 678; building societies, 33. At the end of 1884 the membership was 1,500,000. Of their own capital, in shares and reserve funds, they possessed 300,000,000 marks; and of borrowed capital 500,000,000 marks."— *Science, Sept.* 9, 1887.

A. D. 1859-1887.—The "Social Palace" of M. Godin at Guise.—"The Familistère founded at Guise (Aisne), France, by the late M. Jean Baptiste André Godin, has a world-wide reputation. The Social Palace itself, a marvel of ingenious philanthropy, which realizes successfully some of the characteristic ideas of Fourier, . . . entitles M. Godin to a high place among the social reformers of the 19th century. He was the son of a-worker in iron, and even before his apprenticeship had conceived the idea that he was destined to set a great example to the industrial world. . . . The business carried on in the great foundries at Guise is the manufacture of cast-iron wares for the kitchen and general house use, and of heating apparatus of various kinds. M. Godin was the first man in France to use cast iron in making stoves, in place of sheet iron; this was but one example of his inventive powers. He began in 1840, with 20 workmen, the manufacture which employed in 1883 over 1,400 at Guise and 300 in the branch establishment at Laeken, in Belgium. From the beginning there was an organization for mutual aid among the workmen, assisted by the proprietor. The Familistère was opened in 1860; but it was not until 1877, owing to the obstacles presented by the French law to the plan which he had in mind, that M. Godin introduced participation by the workmen in the profits of his gigantic establishment. . . . In 1880 the establishment became a joint-stock company with limited liability, and the system of profit sharing was begun which still [1889] obtains there. M. Godin's main idea was gradually to transfer the ownership of the business and of the associated Familistère into the hands of his workmen. . . . No workman is admitted to participation [in the profit-sharing] who is not the owner already of a share. But the facility of purchase is great, and the interest on his stock adds materially to the income of the average workman. M. Godin was gradually disposing of his capital to the workmen up to his death [in 1888], and this process will go on until Madame Godin simply retains the direction of the business. But when this shall have happened, the oldest workmen shall, in like manner, release their shares to the younger, in order to keep the ownership of the establishment in the hands of the actual workers from generation to generation. In this way a true coöperative productive house will be formed within ten or a dozen years. M. Godin's capital in 1880 was 4,600,000 francs; the whole capital of the house

in 1883 had risen to 6,000,000 francs, and of this sum 2,753,500 francs were held by various employees in October, 1887. The organization of the workmen as participators forms quite a hierarchy," at the head of which stand the "associates." "The 'associates' must own at least 500 francs' worth of stock; they must be engaged in work, and have their home in the Familistère: they elect new members themselves. . . . They will furnish Madame Godin's successor from their ranks."—N. P. Gilman, *Profit Sharing, pp.* 173-177.—In April, 1859, M. Godin began to realize the most important of his ideas of social reform, namely, "the substitution for our present isolated dwellings of homes and dwellings combined into Social Palaces, where, to use M. Godin's expressive words, 'the equivalents of riches,' that is the most essential advantages which wealth bestows on our common life, may be brought within reach of the mass of the population. In April, 1859, he laid the foundation of the east wing of such a palace, the Familistère of Guise. It was covered in in September of the same year, completed in 1860, and fully occupied in the year following. In 1862 the central building was commenced. It was completed in 1864 and occupied in 1865. The offices in front of the east wing were built at the same time as that wing — in 1860. The other appendages of the palace were added in the following order — the nursery and babies' school in 1866; the schools and theatre in 1869; and the baths and washhouses in 1870. The west wing was begun in 1877, finished in 1879, and fully occupied in 1880. Till its completion the inhabitants of the Familistère numbered about 900 persons; at present [1880] it accommodates 1,200. Its population therefore already assumes the proportion of a considerable village; while its style of construction would easily allow of the addition of quadrangles, communicating with the north-eastern and north-western angles of the central building, by which the number of occupants might be raised to 1,800 or 2,000, without in any way interfering with the enjoyments of the present inmates, supposing circumstances made it desirable to increase their numbers to this extent. . . . Of the moral effect upon the population of the free and yet social life which a unitary dwelling makes possible, M. Godin wrote in 1874: — 'For the edification of those who believe that the working classes are undisciplined or undisciplinable, I must say that there has not been in the Familistère since its foundation a single police case, and yet the palace contains 900 persons; meetings in it are frequent and numerous; and the most active intercourse and relations exist among all the inhabitants.' And this is not the consequence of any strict control exercised over the inmates. On the contrary, the whole life of the Familistère is one of carefully-guarded individual liberty, which is prevented from degenerating into license simply by the influence of public opinion among its inhabitants, who, administering their own internal affairs as a united body, exercise a disciplinary action upon each other. There are no gates, beyond doors turning on a central pivot and never fastened, introduced in winter for the sake of warmth; no porter to mark the time of entrance or egress of anyone. Every set of apartments is accessible to its occupants at any hour of the day or night, with the same facility as if it opened out of a well-lighted street, since all the halls of the Familistère are lighted during the whole night. And as there are ten different entrances, each freely communicating with the whole building, it would be less easy for one inmate to spy the movements of another than it is for the neighbours in an ordinary street to keep an outlook on each other's actions. . . . But one factor, and I conceive a very important factor, in this effort, must not be lost sight of, namely that the Social Palace at Guise is not a home provided for the poor, by a benevolence which houses its own fine clay in its isolated dwelling over against the abodes where those of coarser clay are clustered together. It is a home for M. Godin and members of his family, the heads of departments and other persons connected with him, whose means rise considerably above those of the workers, no less than for the workers in the foundry — a mansion of which it is the glory that all the rooms on every floor originally differ only by a few inches of height, and such slight differences in the height and width of doors and windows as require careful observation to detect, and that all participate alike, according to the quarter of the sky to which they look, in air and light. So that the difference of accommodation is practically reduced to the number of square feet which the means of the inmate enables him to occupy, and the internal arrangement of the space at his disposal."—E. V. Neale, *Associated Homes.*

A. D. 1860-1870.—Nihilism in Russia.—"For the origin of nihilism [which had its period of activity between 1860 and 1870] we must go back half a century to a little company of gifted young men, most of whom rose to great distinction, who used at that time to meet together at the house of a rich merchant in Moscow, for the discussion of philosophy, politics and religion. They were of the most various views. Some of them became Liberal leaders, and wanted Russia to follow the constitutional development of the Western nations; others became founders of the new Slavophil party, contending that Russia should be no imitator, but develop her own native institutions in her own way; and there were at least two among them — Alexander Herzen and Michael Bakunin — who were to be prominent exponents of revolutionary socialism. But they all owned at this period one common master — Hegel. Their host was an ardent Hegelian, and his young friends threw themselves into the study of Hegel with the greatest zeal. Herzen himself tells us in his autobiography how assiduously they read everything that came from his pen, how they devoted nights and weeks to clearing up the meaning of single passages in his writings, and how greedily they devoured every new pamphlet that issued from the German press on any part of his system. From Hegel, Herzen and Bakunin were led, exactly like Marx and the German Young Hegelians, to Feuerbach, and from Feuerbach to socialism. Bakunin, when he retired from the army, rather than be the instrument of oppressing the Poles among whom he was stationed, went for some years to Germany, where he lived among the Young Hegelians and wrote for their organ, the 'Hallische Jahrbücher';

but before either he or Herzen ever had any personal intercommunication with the members of that school of thought, they had passed through precisely the same development. Herzen speaks of socialism almost in the very phrases of the Young Hegelians, as being the new 'terrestrial religion,' in which there was to be neither God nor heaven; as a new system of society which would dispense with an authoritative government, human or Divine, and which should be at once the completion of Christianity and the realization of the Revolution. 'Christianity,' he said, 'made the slave a son of man; the Revolution has emancipated him into a citizen. Socialism would make him a man.' This tendency of thought was strongly supported in the Russian mind by Haxthausen's discovery and laudation of the rural commune of Russia. The Russian State was the most arbitrary, oppressive, and corrupt in Europe, and the Russian Church was the most ignorant and superstitious; but here at last was a Russian institution which was regarded with envy even by wise men of the west, and was really a practical anticipation of that very social system which was the last work of European philosophy. It was with no small pride, therefore, that Alexander Herzen declared that the Muscovite peasant in his dirty sheepskin had solved the social problem of the nineteenth century, and that for Russia, with this great problem already solved, the Revolution was obviously a comparatively simple operation. You had but to remove the Czardom, the services, and the priesthood, and the great mass of the people would still remain organized in fifty thousand complete little self-governing communities living on their common land and ruling their common affairs as they had been doing long before the Czardom came into being. . . . All the wildest phases of nihilist opinion in the sixties were already raging in Russia in the forties. . . . Although the only political outbreak of Nicholas's reign, the Petracheffsky conspiracy of 1849, was little more than a petty street riot, a storm of serious revolt against the tyranny of the Czar was long gathering, which would have burst upon his head after the disasters to his army in the Crimea, had he survived them. He saw it thickening, however, and on his death-bed said to his son, the noble and unfortunate Alexander II., 'I fear you will find the burden too heavy.' The son found it eventually heavy enough, but in the meantime he wisely bent before the storm, relaxed the restraints the father had imposed, and gave pledges of the most liberal reforms in every department of State — judicial administration, local government, popular education, serf emancipation. . . . An independent press was not among the liberties conceded, but Russian opinion at this period found a most effective voice in a newspaper started in London by Alexander Herzen, called the 'Kolokol' (Bell), which for a number of years made a great impression in Russia. . . . Herzen was the hero of the young. Herzenism, we are told, became the rage, and Herzenism appears to have meant, before all, a free handling of everything in Church or State which was previously thought too sacred to be touched. This iconoclastic spirit grew more and more characteristic of Russian society at this period, and presently, under its influence, Herzenism fell into the shade, and nihilism occupied the scene. We possess various accounts of the meaning and nature of nihilism, and they all agree substantially in their description of it. The word was first employed by Turgenieff in his novel 'Fathers and Sons,' where Arcadi Petrovitch surprises his father and uncle by describing his friend Bazaroff as a nihilist. 'A nihilist,' said Nicholas Petrovitch. 'This word must come from the Latin nihil, nothing, as far as I can judge, and consequently it signifies a man who recognises nothing.' 'Or rather who respects nothing,' said Paul Petrovitch. 'A man who looks at everything from a critical point of view,' said Arcadi. 'Does not that come to the same thing?' asked his uncle. 'No, not at all. A nihilist is a man who bows before no authority, who accepts no principle without examination, no matter what credit the principle has.'. . . 'Yes, before we had Hegelians; now we have nihilists. We shall see what you will do to exist in nothingness, in a vacuum, as if under an air pump.' Koscheleff, writing in 1874, gives a similar explanation of nihilism. 'Our disease is a disease of character, and the most dangerous possible. We suffer from a fatal unbelief in everything. We have ceased to believe in this or in that, not because we have studied the subject thoroughly and become convinced of the untenability of our views, but only because some author or another in Germany or England holds this or that doctrine to be unfounded. . . . Our nihilists are simply Radicals. Their loud speeches, their fault-finding, their strong assertions, are grounded on nothing.'"— J. Rae, *Contemporary Socialism, ch.* 9. — See, also, NIHILISM.

A. D. 1862-1864.—Ferdinand Lassalle and the formation of the Social Democratic Party in Germany.—"There has probably been no more interesting appearance in the later political history of Germany than Lassalle's — no character that has secured more completely the attention of its world. There may be and there are many difficulties in the way of accepting Lassalle's political creed, but he had sufficient breadth and strength to win a secure place in the two widely separated domains of German science and politics and to profoundly influence the leading spirits of his time. . . . In addition to his worth in the department of science Lassalle was also a man of affairs, a practical politician, and — however large an element of the actor and sophist there may have been in him — the greatest German orator since Luther and John Tauler. Besides this, he was naturally heroic, as beautiful in person as Goethe; and when we remember that he was crossed in love and met in consequence with a romantic death at the age of thirty-nine, we see at once, as the publicist de Laveleye has suggested, the making of a story like that of Abelard. Lassalle has been the poetry of the various accounts of contemporary socialism, and has already created a literature which is still growing almost with the rapidity of the Goethe literature. The estimate of Lassalle's worth has been in each account naturally influenced by the economical or sentimental standpoint of the writer. To de Laveleye, who takes so much interest in socialism, Lassalle was a handsome agitator, whose merit lies chiefly in his work as interpreter of Karl Marx. To Montefiore he was a man of science who was led by accident into politics; and Franz Mehring, who was once the follower of Lassalle, in his

'Geschichte der deutschen Social-Demokratie,' discusses his career in the intolerant mood in which one generally approaches a forsaken worship. The Englishman John Rae, on the contrary, in his account of socialism, makes Lassalle a hero; and in the narrative of the talented Dane, Georg Brandes, Lassalle is already on the broad road to his place as a god. In the same spirit Rudolf Meyer in his work 'The Fourth Estate's Struggle for Emancipation' does not hesitate to use the chief hyperbole of our modern writers, and compares Lassalle with Jesus of Nazareth. Heine also, who saw in his fellow Israelite that perfect Hegelian 'freedom from God' which he himself had attempted in vain, hails Lassalle as the 'Messiah of the age.' Among Lassalle's more immediate disciples this deification seems to have become a formal cultus, and it is affirmed, hard as one finds it to believe the story, that after Lassalle's death he became an object of worship with the German laborers. . . . The father of Lassalle was a Jewish merchant in Breslau, where the future 'fighter and thinker' as Boeckh wrote mournfully over his tomb, was born on the 11th of April, 1825. The Israelite Lassal, for so the family name is still written, was a wealthy wholesale dealer in cloth, and with a consciousness of the good in such an avocation had from the first intended that Ferdinand should be a merchant. . . . But this was not his destiny. . . . The first feature in Lassalle was his will, the source of his strength and his ruin, and one can find no period in his life when this will seemed in the least capable of compromise or submission. . . . When he decided to become a Christian and a philosopher instead of a merchant, the family had nothing to do but to accommodate themselves as best they could to this arrangement."—L. J. Huff, *Ferdinand Lassalle* (*Pol. Science Quarterly, Sept.*, 1887).—"It was in 1862 that Lassalle began his agitation in behalf of the laboring classes, an agitation which resulted in the formation of the German Social Democratic Party. Previous to his time, German laborers had been considered contented and peaceable. It had been thought that a working-men's party might be established in France or England, but that it was hopeless to attempt to move the phlegmatic German laborers. Lassalle's historical importance lies in the fact that he was able to work upon the laborers so powerfully as to arouse them to action. It is due to Lassalle above all others that German workingmen's battalions, to use the social democratic expression, now form the vanguard in the struggle for the emancipation of labor. Lassalle's writings did not advance materially the theory of social democracy. He drew from Rodbertus and Marx in his economic writings, but he clothed their thoughts in such manner as to enable ordinary laborers to understand them, and this they never could have done without such help. . . . Lassalle gave to Ricardo's law of wages the designation, the iron law of wages, and expounded to the laborers its full significance, showing them how it inevitably forced wages down to a level just sufficient to enable them to live. He acknowledged that it was the key-stone of his system and that his doctrines stood or fell with it. Laborers were told that this law could be overthrown only by the abolition of the wages system. How Lassalle really thought this was to be accomplished is not so evident. He proposed to the laborers that government should aid them by the use of its credit to the extent of 100,000,000 of thalers, to establish co-operative associations for production; and a great deal of breath has been wasted to show the inadequacy of his proposed measures. Lassalle could not himself have supposed that so insignificant a matter as the granting of a small loan would solve the labor question. He recognized, however, that it was necessary to have some definite party programme to insure success in agitation. . . . On the 23d of May, 1863, German social democracy was born. Little importance was attached to the event at the time. A few men met at Leipsic, and, under the leadership of Ferdinand Lassalle, formed a new political party called the 'Universal German Laborers' Union' ('Der Allgemeine Deutsche Arbeiterverein'). . . . Lassalle did not live to see the fruits of his labors. He met with some success and celebrated a few triumphs, but the Union did not flourish as he hoped. At the time of his death he did not appear to have a firm, lasting hold on the laboring population. There then existed no social-democratic party with political power. Although Lassalle lost his life in a duel [1864], which had its origin in a love affair, and not in any struggle for the rights of labor, he was canonized at once by the workingmen. . . . His influence increased more than tenfold as soon as he ceased to live."—R. T. Ely, *French and German Socialism in Modern Times, ch.* 12.

A. D. 1862-1872.—The International in Europe.—"The International came into being immediately after the holding of the International Exhibition at London, in 1862. At least it was then that it took bodily shape, for the idea, in its theoretical form, dates from much earlier. . . . In 1862 certain manufacturers, such as M. Arlès-Dufour, and certain newspapers, such as 'Le Temps' and 'L'Opinion Nationale,' started the idea that it would be a good thing to send delegates from the French working men to the London Exhibition. 'The visit to their comrades in England,' said 'L'Opinion Nationale,' 'would establish mutual relations in every way advantageous. While they would be able to get an idea of the great artistic and industrial works at the Exhibition, they would at the same time feel more strongly the mutual interests which bind the working men of both countries together; the old leaven of international discord would settle down, and national jealousy would give place to a healthy fraternal emulation.' The whole programme of the International is summed up in these lines; but the manufacturers little foresaw the manner in which it was going to be carried out. Napoleon III. appeared to be very favourable to the sending of the delegates to London. He allowed them to be chosen by universal suffrage among the members of the several trades, and, naturally, those who spoke the strongest on the rights of labour were chosen. By the Emperor's orders, their journey was facilitated in every way. At that time Napoleon still dreamed of relying, for the maintenance of his Empire, on the working men and peasants, and of thus coping with the liberal middle classes. At London the English working men gave the most cordial welcome to 'their brothers of France.' On the 5th of August they organized a fête of 'international fraternization' at the Freemasons'

Tavern. . . . They proposed to create committees of working men 'as a medium for the interchange of ideas on questions of international trade.' The conception of a universal association appears here in embryo. Two years afterwards it saw the light. On the 28th of September, 1864, a great meeting of working men of all nations was held at St. Martin's Hall, London, under the presidency of Professor Beesly. M. Tolain spoke in the name of France. Karl Marx was the real inspirer of the movement, though Mazzini's secretary, Major Wolff, assisted him—a fact which has given rise to the statement that Mazzini was the founder of the International. So far was this from being the case that he only joined it with distrust, and soon left it. The meeting appointed a provisional committee to draw up the statutes of the association, to be submitted to the Universal Congress, which was expected to meet at Brussels in the following year. In this committee England, France, Italy, Poland, Switzerland, and Germany were represented; and afterwards delegates from other countries were admitted. They were fifty in all. They adopted none of the ways of a secret society. On the contrary, it was by publicity that they hoped to carry on their propaganda. Their office was in London. . . . Mazzini, by his secretary, Wolff, proposed a highly centralized organization, which would entrust the entire management to the leaders. Marx took the other side. . . . Marx carried the day. Soon, in his turn, he too was to be opposed and turned off as too dictatorial. Mazzini and his followers seceded. . . . The progress of the new association was at first very slow." After its second congress, held at Lausanne, in 1867, it spread rapidly and acquired an influence which was especially alarming to the French government. In 1870 the International was at the summit of its power. In 1872 its congress, at the Hague, was a battlefield of struggling factions and clashing ideas, and practically it perished in the conflict. "The causes of the rapid decline of the famous Association are easy to discover, and they are instructive. First of all, as the organizer of strikes, its principal and most practical end, it proved itself timid and impotent. The various bodies of working men were not slow to perceive this, and gave it up. Next, it had taken for motto, 'Emancipation of the workers by the workers themselves.' It was intended, then, to do without the bourgeois-radicals, 'the palaverers,' 'the adventurers,' who when the revolution was made, would step into power and leave the working men as they were before. The majority of the delegates were nevertheless bourgeois; but, in reality, the sentiment of revolt against the aristocratic direction of the more intelligent members always persisted, and it fastened principally on Karl Marx, the true founder of the International, and the only political brain that it contained. But to keep in existence a vast association embracing very numerous groups of different nationalities, and influenced sometimes by divergent currents of ideas, to make use of publicity as the sole means of propaganda, and yet to escape the repressive laws of different States, was evidently no easy task. How could it possibly have lasted after the only man capable of directing it had been ostracized? The cause of the failure was not accidental; it was part of the very essence of the attempt. The proletariat will not follow the middle-class radicals, because political liberties, republican institutions, and even universal suffrage, which the latter claim or are ready to decree, do not change the relations of capital and labour. On the other hand, the working man is evidently incapable of directing a revolutionary movement which is to solve the thousand difficulties created by any complete change in the economic order. Revolutionary Socialism thus leads to an insoluble dilemma and to practical impotence. A further cause contributed to the rapid fall of the International, namely, personal jealousies."—É. de Laveleye, *The Socialism of To-day, ch.* 9.

A. D. 1866-1875.—Rise and growth of the Patrons of Husbandry, or Grangers, in the United States.—The order, composed of farmers, known as Patrons of Husbandry, or Grangers, was founded in 1866. It grew rapidly during the first decade of its existence, and reported a membership, in November, 1875, of 763,263. After that period the numbers declined. The general aims of the order were set forth in a "Declaration of Purposes," as follows: "We shall endeavor to advance our cause by laboring to accomplishing the following objects: To develop a better and higher manhood and womanhood among ourselves. To enhance the comforts and attractions of our homes, and strengthen our attachments to our pursuits. To foster mutual understanding and co-operation. . . . To discountenance the credit system, the mortgage system, the fashion system, and every other system tending to prodigality and bankruptcy. We propose meeting together, talking together, working together, buying together, selling together, and in general acting together for our mutual protection and advancement, as occasion may require. We shall avoid litigation as much as possible by arbitration in the Grange. . . . We are not enemies to capital, but we oppose the tyranny of monopolies. We long to see the antagonism between labor and capital removed by common consent and by an enlightened statesmanship worthy of the nineteenth century. . . . Last, but not least, we proclaim it among our purposes to inculcate a proper appreciation of the abilities and sphere of woman, as is indicated by admitting her to membership and position in our order."—R. T. Ely, *The Labor Movement in America, ch.* 3.—See, also, United States of Am.: A. D. 1877-1891.

A. D. 1867-1875.—The Brocton Community of the Brotherhood of the New Life.—The Community of the Brotherhood of the New Life was established at Brocton, on the shore of Lake Erie, by Thomas Lake Harris, in 1867. Harris had been, partly at least, the founder of an earlier community at Mountain Cove, in North Carolina, which went to pieces after two years. For some time he travelled and lectured in America and England, and during a certain period he engaged in business as a banker, at Amenia, in Dutchess county, New York. He possessed qualities which exercised a fascinating influence upon many people of superior cultivation, and made them docile recipients of a very peculiar religious teaching. He claimed to have made a strange spiritual discovery, through which those who disciplined themselves to the acceptance of what it offered might attain to a "new life." The discipline required seems to have involved a very complete surrender to the

leader, Harris; and it was on such terms, apparently, that the Community at Brocton—or Salem-on-Erie as the Brotherhood renamed the place—was constituted. Among those who entered it was the brilliant writer, diplomatist, and man of society, Laurence Oliphant, who joined, with his wife, and with Lady Oliphant, his mother. The connection of Oliphant with the society drew to it more attention than it might otherwise have received. The Community bought and owned about 2,000 acres of land, and devoted its labors extensively and with success to the culture of grapes and the making of wine. The breaking up of the Brotherhood appears to be covered with a good deal of obscurity. Harris left Brocton in 1875 and went to California, where he is reported to be living, at Sonoma, on a great estate. Some of the Brotherhood went with him; others were scattered, and the Brocton vineyards are now cultivated by other hands.—W. E. K., *Brocton* (*Buffalo Courier*, *July* 19, 1891).

A. D. 1869-1883.—The Knights of Labor.—"The second great attempt [the first having been 'the International'] to organize labor on a broad basis—as broad as society itself, in which all trades should be recognized—was the Noble Order of Knights of Labor of America. This organization was born on Thanksgiving Day, 1869, in the city of Philadelphia, and was the result of the efforts of Uriah S. Stephens, as the leader, and six associates, all garment-cutters. For several years previous to this date, the garment-cutters of Philadelphia had been organized as a trades-union, but had failed to maintain a satisfactory rate of wages in their trade. A feeling of dissatisfaction prevailed, which resulted, in the fall of 1869, in a vote to disband the union. Stephens, foreseeing this result, had quietly prepared the outlines of a plan for an organization embracing 'all branches of honorable toil,' and based upon education, which, through co-operation and an intelligent use of the ballot, should gradually abolish the present wages system. Stephens himself was a man of great force of character, a skilled mechanic, with the love of books which enabled him to pursue his studies during his apprenticeship, and feeling withal a strong affection for secret organizations, having been for many years connected with the Masonic order. . . . He believed it was necessary to bring all wage-workers together in one organization, where measures affecting the interests of all could be intelligently discussed and acted upon; and this he held could not be done in a trades-union. At the last session of the Garment-cutters' Union, and after the motion to disband had prevailed, Stephens invited the few members present to meet him, in order to discuss his new plan of organization. . . . Stephens then laid before his guests his plan of an organization, which he designated 'The Noble and Holy Order of the Knights of Labor.' It was a new departure in labor organization. The founder described what he considered a tendency toward large combinations of capital, and argued that the trades-union form of organization was like a bundle of sticks when unbound,—weak and powerless to resist combination. . . . Stephens' great controlling ideas may be formulated as follows: first that surplus labor always keeps wages down; and, second, that nothing can remedy this evil but a purely and deeply secret organization, based upon a plan that shall teach, or rather inculcate, organization, and at the same time educate its membership to one set of ideas ultimately subversive of the present wages system. . . . At a subsequent meeting, held Dec. 28, 1869, upon the report of a Committee on Ritual, involving obligations and oaths, Mr. Stephens and his six associates subscribed their names to the obligations; and, when the ritual was adopted, Mr. James L. Wright moved that the new Order be named the 'Knights of Labor.' . . . The members were sworn to the strictest secrecy. The name even of the Order was not to be divulged. . . . The rules of government . . . excluded physicians from the Order, because professional confidence might force the societies' secrets into unfriendly ears. The rule prohibiting the admission of physicians, however, was repealed at Detroit in 1881. Politicians were to be excluded, because the founders of the Order considered that their moral character was on too low a plane for the sacred work of the new Order; and, besides, it was considered that professional politicians would not keep the secrets of the Order, if such secrets could be used for their own advantage. Men engaged in political work are not now excluded for that cause alone. Lawyers were to be excluded, and still are, because the founders considered that the logical, if not the practical, career of the lawyer is to get money by his aptitudes and cunning, which, if used to the advantage of one, must be at the expense of another. . . . Rum-sellers were and are excluded, because the trade is not only useless, by being non-productive of articles of use, but results in great suffering and immorality. . . . The founders also considered that those who sell or otherwise handle liquors should be excluded, because such persons would be a defilement to the Order. In consequence of the close secrecy thrown around the new organization, it did not grow rapidly. Stephens, impressed with the Masonic ritual and that of the Odd Fellows, was unwilling to allow any change. . . . So the society struggled on, admitting now and then a member, its affairs running smoothly, as a whole, but the name of the organization never divulged. . . . In January, 1878, when the whole machinery of the organization was perfected so far as bodies were concerned, there had been no general declaration of principles. The Order had been intensely secret, as much as the society of the Masons or of the Odd Fellows. The name of the Order began to be whispered about; but beyond the name and most exaggerated accounts of the membership, nothing was known of the Knights of Labor. The membership must have been small,—indeed, not counting far into the thousands. In fact, it did not reach fifty thousand until five years later. . . . About this time [1878] the strict secrecy in the workings of the Order, and the fact that the obligations were oaths taken on the Bible, brought on a conflict with the Catholic Church, and during the years 1877–78 many Local and several District Assemblies lapsed. . . . Measures were adopted whereby a satisfactory conciliation was brought about, on the general ground that the labor movement could consistently take no interest in the advocacy of any kind of religion, nor assume any position for or against

creeds. The prejudices against the Knights of Labor on account of Catholic opposition then naturally, but gradually, disappeared; and the Order took on new strength, until there were in 1879 twenty-three District Assemblies and about thirteen hundred Local Assemblies in the United States. . . . The third annual session of the General Assembly was held at Chicago, in September, 1879, when the federal body busied itself with general legislation, and was called upon to consider the resignation of Mr. Stephens as Master Workman. This resignation, urgently pressed by Mr. Stephens, was accepted; and Hon. Terrence V. Powderly was elected Grand Master Workman in his place. . . . The membership was stated to be five thousand in good standing. . . . The next annual meeting of the General Assembly (the fourth) took place at Pittsburg, in September, 1880, and consisted of forty delegates. At this session, strikes were denounced as injurious, and as not worthy of support except in extreme cases. . . . The fifth session was held in September, 1881, at Detroit. This session had to deal with one of the most important actions in the history of the Order. The General Assembly then declared that on and after January 1, 1882, the name and objects of the Order should be made public. It also declared that women should be admitted upon an equal footing with men. . . . A benefit insurance law was also passed, and an entire change of the ritual was advised. . . . The sixth annual assembly was held in New York in September, 1882, the chief business consisting in the discussion, and finally in the adoption, of a revised constitution and ritual. At this Assembly, what is known as the 'strike' element — that is, the supporters and believers in strikes — was in the majority, and laws and regulations for supporting strikes were adopted; and the co-operation of members was suppressed by a change of the co-operative law of the Order. . . . The seventh annual session of the General Assembly was held at Cincinnati in September, 1883, and consisted of one hundred and ten representative delegates. . . . This large representation was owing to the rapid growth of the Order since the name and objects had been made public. . . . The membership of the Order was reported to this Assembly to be, in round numbers, fifty-two thousand. In September, 1884, the eighth annual Assembly convened at Philadelphia. Strikes and boycotts were denounced. . . . The ninth General Assembly convened at Hamilton, Ontario, in October, 1885, and adopted legislation looking to the prevention of strikes and boycotts. The session lasted eight days, the membership being reported at one hundred and eleven thousand. . . . The tenth annual session of the General Assembly was held at Richmond, Virginia, in October, 1886. . . . Mr. Powderly, in his testimony before the Strike Investigating Committee of Congress, April 21, 1886, made the following statement as to membership: 'Our present membership does not exceed 500,000, although we have been credited with 5,000,000.' This statement indicates a growth of nearly 400,000 in one year. The growth was so rapid that the Executive Board of the Order felt constrained to call a halt in the initiation of new members. To-day (December 10, 1886), while the membership has fallen off in some localities, from various causes, in the whole country it has increased, and is, according to the best inside estimates, not much less than one million."— Carroll D. Wright, *Historical Sketch of the Knights of Labor* (*Quarterly Journal of Economics, Jan.*, 1887). — "At the annual convention of the Knights of Labor, held at Philadelphia, November 14–28 [1893], Grand Master Workman Powderly, for fifteen years the head of the order, was succeeded by J. R. Sovereign, of Iowa. The new leader's first address to the organization, issued December 7, contained in addition to the usual denunciation of capitalists, a strong demand for the free coinage of silver and an expansion of the currency."— *Political Science Quarterly, June*, 1894; *Record of Political Events.*

A. D. 1872-1886. — The International in America.—By the order of the congress of the International held at the Hague in 1872, the General Council of the Association was transferred to New York. "Modern socialism had then undoubtedly begun to exist in America. The first proclamation of the council from their new headquarters was an appeal to workingmen 'to emancipate labor and eradicate all international and national strife.' . . . The 'Exceptional Law' passed against socialists by the German Parliament in 1878 drove many socialists from Germany to this country, and these have strengthened the cause of American socialism through membership in trades-unions and in the Socialistic Labor Party. There have been several changes among the socialists in party organization and name since 1873, and national conventions or congresses have met from time to time. . . . The name Socialistic Labor Party was adopted in 1877 at the Newark Convention. In 1883 the split between the moderates and extremists had become definite, and the latter held their congress in Pittsburg, and the former in Baltimore. . . . The terrible affair of May 4, 1886, when the Chicago Internationalists endeavored to resist the police by the use of dynamite, terminated all possibility of joint action — even if there could previously have been any remote hope of it; for that was denounced as criminal folly by the Socialistic Labor Party. . . . The Internationalists, at their congress in Pittsburg, adopted unanimously a manifesto or declaration of motives and principles, often called the Pittsburg Proclamation, in which they describe their ultimate goal in these words: —'What we would achieve is, therefore, plainly and simply,—First, Destruction of the existing class rule, by all means, i. e., by energetic, relentless, revolutionary, and international action. Second, Establishment of a free society based upon co-operative organization of production. Third, Free exchange of equivalent products by and between the productive organizations without commerce and profit-mongery. Fourth, Organization of education on a secular, scientific and equal basis for both sexes. Fifth, Equal rights for all without distinction to sex or race. Sixth, Regulation of all public affairs by free contracts between the autonomous (independent) communes and associations, resting on a federalistic basis.'"—R. T. Ely, *The Labor Movement in America, ch.* 8–9.

A. D. 1875-1893.— Socialist parties in Germany.— Their increasing strength.—Before 1875, there existed in Germany two powerful Socialist associations. The first was called the 'General Association of German Working

Men' (der allgemeine deutsche Arbeiterverein). Founded by Lassalle in 1863, it afterwards had for president the deputy Schweizer, and then the deputy Hasenclever. Its principal centre of activity was North Germany. The second was the 'Social-democratic Working Men's Party' (die Social-democratische Arbeiterpartei), led by two well-known deputies of the Reichstag, Herr Bebel and Herr Liebknecht. Its adherents were chiefly in Saxony and Southern Germany. The first took into account the ties of nationality, and claimed the intervention of the State in order to bring about a gradual transformation of society; the second, on the contrary, expected the triumph of its cause only from a revolutionary movement. These two associations existed for a long time in open hostility towards each other; less, however, from the difference of the aims they had in view than in consequence of personal rivalry. Nevertheless, in May, 1875, at the Congress of Gotha, they amalgamated under the title of the 'Socialist Working Men's Party of Germany' (Socialistische Arbeiterpartei Deutschlands). The deputy Hasenclever was nominated president; but the union did not last long, or was never complete, for as early as the month of August following a separate meeting of the 'General Association of German Working Men' was held at Hamburg. . . . The German Socialist party does not confine itself to stating general principles. Now that it has gained foothold on political soil, and sends representatives to Parliament, it endeavours to make known the means by which it hopes to realize the reforms it has in view. This is what it claims:—'The German Socialist party demands, in order to pave the way for the solution of the social question, the creation of socialistic productive associations aided by the State, under the democratic control of the working people. These productive associations for manufacture and agriculture should be created on a sufficiently large scale to enable the socialistic organization of labour to arise out of them. As basis of the State, it demands direct and universal suffrage for all citizens of twenty years of age, in all elections both of State and Commune; direct legislation, by the people, including the decision of peace or war; general liability to bear arms and a militia composed of civilians instead of a standing army; the abolition of all laws restricting the right of association, the right of assembly, the free expression of opinion, free thought, and free inquiry; gratuitous justice administered by the people; compulsory education, the same for all and given by the State; and a declaration that religion is an object of private concern.'"—É. de Laveleye, *The Socialism of To-day, introd. and ch.* 1.—"The social democratic party [in Germany] advanced in strength, as far as that is measured by votes, until 1878, when the decrease was only slight. Two attempts were made on the life of the Emperor William in that year, and the social democrats had to bear a good share of the blame. . . . In the Reichstag the celebrated socialistic law was passed, which gave government exceptional and despotic powers to proceed against social democracy. . . . Governmental persecution united the divided members and gave new energy to all. . . . They all became secret missionaries, distributing tracts and exhorting individually their fellow-laborers to join the struggle for the emancipation of labor. The German social democrats have held two congresses since the socialistic law, both, of course, on foreign soil, and both have indicated progress. The first was held at Wyden, Switzerland, August 20-23, 1880. This resulted in a complete triumph for the more moderate party. The two leading extremists, Hasselmann and Most, were both expelled from the party — the former by all save three votes, the latter by all save two. The next congress was held at Copenhagen, Denmark, from March 29 to April 2, 1883. It exhibited greater unanimity of sentiment and plan, and a more wide-spread interest in social democracy, than any previous congress."—R. T. Ely, *French and German Socialism, ch.* 14.—At the general election, February, 1890, in Germany, the Social Democratic party "polled more votes than any other single party in the Empire, and returned to the Imperial Diet a body of representatives strong enough, by skilful alliances, to exercise an effective influence on the course of affairs. The advance of the party may be seen in the increase of the socialist vote at the successive elections since the creation of the Empire: In 1871 it was 101,927; 1874, 351,670; 1877, 493,447; 1878, 437,438; 1881, 311,961; 1884, 549,000; 1887, 774,128; 1890, 1,427,000. The effect of the coercive laws of 1878, as shown by these figures, is very noteworthy. . . . The first effect . . . was, as was natural, to disorganize the socialist party for the time. Hundreds of its leaders were expelled from the country; hundreds were thrown into prison or placed under police restriction; its clubs and newspapers were suppressed; it was not allowed to hold meetings, to make speeches, or to circulate literature of any kind. In the course of the twelve years during which this exceptional legislation has subsisted, it was stated at the recent Socialist Congress at Halle [1890], that 155 socialist journals and 1,200 books or pamphlets had been prohibited; 900 members of the party had been banished without trial; 1,500 had been apprehended and 300 punished for contraventions of the Anti-Socialist Laws." But this "policy of repression has ended in tripling the strength of the party it was designed to crush, and placing it in possession of one-fifth of the whole voting power of the nation. It was high time, therefore, to abandon so ineffectual a policy, and the socialist coercive laws expired on the 30th September, 1890. . . . The strength of the party in Parliament has never corresponded with its strength at the polls. . . . In 1890, with an electoral vote which, under a system of proportional representation, would have secured for it 80 members, it has carried only 37."—J. Rae, *Contemporary Socialism, pp.* 33–34.—The Social Democrats "retained their position as the strongest party in the empire in the elections of 1893, casting nearly 1,800,000 votes, and electing 44 members of parliament. . . . Another indication of the growth of social democracy, is the fact that it has gained a foothold among the students of the universities."—R. T. Ely, *Socialism, p.* 59.—"The two principal leaders of the Social-Democratic party in Germany — in fact, the only members of the party to whom the term leader can properly be applied — are now Wilhelm Liebknecht and August Bebel. Both men have lived eventful lives and have suffered often and severely for the sake of their cause. . . . Liebknecht has done a great deal to popularise the political and social

theories of men like Marx and Lassalle. He is through and through a Communist and a Republican, and he is determined upon realising his ideals by hook or by crook. . . . He works for the subversion of the monarchical principle and for the establishment of a Free People's State. In this State all subjects will stand upon the same level: there will be no classes and no privileges. . . . Bebel once summarised his views in a sentence which, so far as he spoke for himself, is as true as it is short. 'We aim,' he said, 'in the domain of politics at Republicanism, in the domain of economics at Socialism, and in the domain of what is to-day called religion at Atheism.' Here we see Bebel as in a mirror. He is a Republican and a Socialist, and he is proud of it; he is without religion, and he is never tired of parading the fact, even having himself described in the Parliamentary Almanacs as 'religionslos.' Like his colleague Liebknecht he is a warm admirer of England."—W. H. Dawson, *German Socialism and Ferdinand Lassalle, ch.* 15.

A. D. 1880.—Mr. Henry George, and the proposed confiscation of rent.—The Single-Tax movement.—The doctrine of Mr. Henry George, set forth in his famous book, "Progress and Poverty," published in 1880, is stated in his own language as follows: "We have traced the want and suffering that everywhere prevail among the working classes, the recurring paroxysms of industrial depression, the scarcity of employment, the stagnation of capital, the tendency of wages to the starvation point, that exhibit themselves more and more strongly as material progress goes on, to the fact that the land on which and from which all must live is made the exclusive property of some. We have seen that there is no possible remedy for these evils but the abolition of their cause; we have seen that private property in land has no warrant in justice, but stands condemned as the denial of natural right—a subversion of the law of nature that as social development goes on must condemn the masses of men to a slavery the hardest and most degrading. . . . I do not propose either to purchase or to confiscate private property in land. The first would be unjust; the second, needless. Let the individuals who now hold it still retain, if they want to, possession of what they are pleased to call their land. Let them continue to call it their land. Let them buy and sell, and bequeath and devise it. We may safely leave them the shell, if we take the kernel. It is not necessary to confiscate land; it is only necessary to confiscate rent. Nor to take rent for public uses is it necessary that the State should bother with the letting of lands, and assume the chances of the favoritism, collusion, and corruption that might involve. It is not necessary that any new machinery should be created. The machinery already exists. Instead of extending it, all we have to do is to simplify and reduce it. By leaving to land owners a percentage of rent which would probably be much less than the cost and loss involved in attempting to rent lands through State agency, and by making use of this existing machinery, we may, without jar or shock, assert the common right to land by taking rent for public uses. We already take some rent in taxation. We have only to make some changes in our modes of taxation to take it all. What I, therefore, propose, as the simple yet sovereign remedy, which will raise wages, increase the earnings of capital, extirpate pauperism, abolish poverty, give remunerative employment to whoever wishes it, afford free scope to human powers, lessen crime, elevate morals, and taste, and intelligence, purify government and carry civilization to yet nobler heights, is—to appropriate rent by taxation. In this way, the State may become the universal landlord without calling herself so, and without assuming a single new function. In form, the ownership of land would remain just as now. No owner of land need be dispossessed, and no restriction need be placed upon the amount of land any one could hold. For, rent being taken by the State in taxes, land, no matter in whose name it stood, or in what parcels it was held, would be really common property, and every member of the community would participate in the advantages of its ownership. Now, insomuch as the taxation of rent, or land values, must necessarily be increased just as we abolish other taxes, we may put the proposition into practical form by proposing—To abolish all taxation save that upon land values."—H. George, *Progress and Poverty, bk.* 8, *ch.* 2.—"Mr. George sent his 'Progress and Poverty' into the world with the remarkable prediction that it would find not only readers but apostles. . . . Mr. George's prediction is not more remarkable than its fulfilment. His work has had an unusually extensive sale; a hundred editions in America, and an edition of 60,000 copies in this country [England, 1891] are sufficient evidences of that; but the most striking feature in its reception is precisely that which its author foretold; it created an army of apostles, and was enthusiastically circulated, like the testament of a new dispensation. Societies were formed, journals were devised to propagate its saving doctrines, and little companies of the faithful held stated meetings for its reading and exposition. . . . The author was hailed as a new and better Adam Smith, as at once a reformer of science and a renovator of society."—J. Rae, *Contemporary Socialism, ch.* 12.

A. D. 1883-1889.—State Socialistic measures of the German Government.—"Replying once to the accusation made by an opponent in the Reichstag that his social-political measures were tainted with Socialism, Prince Bismarck said, 'You will be compelled yet to add a few drops of social oil in the recipe you prescribe for the State; how many I cannot say.' In no measures has more of the Chancellor's 'social oil' been introduced than in the industrial insurance laws. These may be said to indicate the high-water mark of German State Socialism. . . . The Sickness Insurance Law of 1883, the Accident Insurance Laws of 1884 and 1885, and the Old Age Insurance Law of 1889 are based upon the principle of compulsion which was introduced into the sick insurance legislation of Prussia in 1854. . . . The trio of insurance laws was completed in 1889 by the passing of a measure providing for the insurance of workpeople against the time of incapacity and old age (Invalidäts und Altersversicherungsgesetz). This was no after-thought suggested by the laws which preceded. It formed from the first part of the complete plan of insurance foreshadowed by Prince Bismarck over a decade ago, and in some of the Chancellor's early speeches on the social question he regarded the pensioning of old and

incapacitated workpeople as at once desirable and inevitable. . . . The Old Age Insurance Law is expected to apply to about twelve million workpeople, including labourers, factory operatives, journeymen, domestic servants, clerks, assistants, and apprentices in handicrafts and in trade (apothecaries excluded), and smaller officials (as on railways, etc.), so long as their wages do not reach 2,000 marks (about £100) a year; also persons employed in shipping, whether maritime, river, or lake; and, if the Federal Council so determine, certain classes of small independent undertakers. The obligation to insure begins with the completion of the sixteenth year, but there are exemptions, including persons who, owing to physical or mental weakness, are unable to earn fixed minimum wages, and persons already entitled to public pensions, equal in amount to the benefits secured by the law, or who are assured accident annuities. The contributions are paid by the employers and workpeople in equal shares, but the State also guarantees a yearly subsidy of 50 marks (£2.10s.) for every annuity paid. Contributions are only to be paid when the insured is in work. The law fixes four wages classes, with proportionate contributions as follows:—

Wages.		Contributions.	
		Weekly.	Yearly (47 weeks).
1st class	300 marks (£15)	14 pfennig	3·29 marks (3s. 3½d.)
2nd "	500 " (£25)	20 "	4·70 " (4s. 8½d.)
3rd "	720 " (£36)	24 "	5·64 " (5s. 7½d.)
4th "	960 " (£78)	30 "	7·05 " (7s.).

Of course, of these contributions the workpeople only pay half. Old age annuities are first claimable at the beginning of the seventy-first year, but annuities on account of permanent incapacity may begin at any time after the workman has been insured for five years. The minimum period of contribution in the case of old age pensioning is thirty years of forty-seven premiums each. Where a workman is prevented by illness (exceeding a week but not exceeding a year), caused by no fault of his own, or by military duties, from continuing his contributions, the period of his absence from work is reckoned part of the contributory year. . . . Contributions are made in postage stamps affixed to yearly receipt cards supplied to the insured. Annuities are to be paid through the post-office monthly in advance."—W. H. Dawson, *Bismarck and State Socialism, ch.* 9.

A. D. 1887-1888.—Development of the "New Trade Unionism."—"The elements composing what is termed the New Trade Unionism are not to be found in the constitution, organization, and rules of the Unions started within the last two or three years. In these respects they either conform to the experience of modern Unions, or they revive the practices of the older Unions. There is scarcely a feature in which any of them differ from types of Unions long in existence. In what, then, consists the 'New Trade Unionism,' of which we hear so much? Mainly in the aspirations, conduct, modes of advocacy, and methods of procedure of, and also in the expressions used, and principles inculcated by the new leaders in labour movements, in their speeches and by their acts. This New Unionism has been formulated and promulgated at Trades Union Congresses, at other Congresses and Conferences, and at the meetings held in various parts of the country; and in letters and articles which have appeared in the newspaper, press, and public journals from the pens of the new leaders. . . . The institution of Labour Bureaus, or the establishment of Labour Registries, is one of the acknowledged objects of the Dockers' Union. Singularly enough this is the first time that any such project has had the sanction of a boná-fide Trade Union. All the older Unions repudiate every such scheme. It has hitherto been regarded as opposed in principle to Trade Unionism. . . . At the recent Trades Union Congress held in Liverpool, September 1890, the following resolution was moved by one of the London delegates representing the 'South Side Labour Protection League'—'That in the opinion of this Congress, in order to carry on more effectually the organization of the large mass of unorganized labour, to bring into closer combination those sections of labour already organized, to provide means for communication and the interchange of information between all sections of industry, and the proper tabulation of statistics as to employment, &c., of advantage to the workmen, it is necessary that a labour exchange, on the model of the Paris Bourse des Travail, should be provided and maintained by public funds in every industrial centre in the kingdom.' . . . The mover said that 'not a single delegate could deny the necessity for such an institution, in every industrial centre.' The Congress evidently thought otherwise, for only 74 voted for the resolution, while 92 voted against it. . . . The proposal, however, shows to what an extent the New Trade Unionism seeks for Government aid, or municipal assistance, in labour movements. The most astonishing resolution carried by the Congress was the following—'Whereas the ever-changing methods of manufacture affect large numbers of workers adversely by throwing them out of employment, without compensation for loss of situation, and whereas those persons are in many instances driven to destitution, crime, and pauperism: Resolved, that this Congress is of opinion that power should at once be granted to each municipality or County Council to establish workshops and factories under municipal control, where such persons shall be put to useful employment, and that it be an instruction to the Parliamentary Committee to at once take the matter in hand.' . . . The proposal of all others which the new Trade Unionists sought to ingraft upon, and had determined to carry as a portion of the programme of the Trades Union Congress, was the 'legal Eight Hour day;' and they actually succeeded in their design after a stormy battle. The new leaders, with their socialist allies, had been working to that end for over two years."— G. Howell, *Trade Unionism, New and Old, ch.* 8, *pt.* 2.

A. D. 1888-1893.—Mr. Bellamy's "Looking Backward," and the Nationalist movement.—"The so-called 'Nationalist' movement, originating in an ingenious novel called 'Looking Backward' [published in 1888], is one of the most interesting phenomena of the present condition of public opinion in this country. Mr. Edward Bellamy, a novelist by profession, is the recognized father of the Nationalist Clubs which have been formed in various parts of the United States within the last twelve months. His romance of the year 2000 A. D. is the reason for their existence, and furnishes the inspiration of their declarations. . . . The new society [depicted in Mr. Bellamy's romance] is industrial,

rather than militant, in every feature. There are no wars or government war powers. But the function has been assumed by the nation of directing the industry of every citizen. Every man and woman is enrolled in the 'industrial army,' this conception being fundamental. This universal industrial service rests upon the recognized duty of every citizen 'to contribute his quota of industrial or intellectual work to the maintenance of the nation.' The period of service 'is twenty-four years, beginning at the close of the course of education at twenty-one, and terminating at forty-five. After forty-five, while discharged from labor, the citizen still remains liable to special calls, in case of emergencies.' There are, of course, no such numerous exemptions from this industrial service as qualify very greatly the rigor of the Continental military service of the present day. Every new recruit belongs for three years to the class of unskilled or common laborers. After this term, he is free to choose in what branch of the service he will engage, to work with hand or with brain: — 'It is the business of the administration to seek constantly to equalize the attractions of the trades, so far as the conditions in them are concerned, so that all trades shall be equally attractive to persons having natural tastes for them. This is done by making the hours of labor in different trades to differ according to their arduousness. The principle is that no man's work ought to be, on the whole, harder for him than any other man's for him, the workers themselves to be the judges.' The headship of the industrial army of the nation is the most important function of the President of the United States. Promotion from the ranks lies through three grades up to the officers. These officers are, in ascending order, lieutenants, captains, or foremen, colonels, or superintendents, and generals of the guilds. The various trades are grouped into ten great departments, each of which has a chief. These chiefs form the council of the general-in-chief, who is the President. He must have passed through all the grades, from the common laborers up. . . . Congress has but little to do beyond passing upon the reports of the President and the heads of departments at the end of their terms of office. Any laws which one Congress enacts must receive the assent of another, five years later, before going into effect; but, as there are no parties or politicians in the year 2000 A. D., this is a matter of little consequence. In Mr. Bellamy's Utopia, money is unknown: there is, therefore, no need of banks or bankers. Buying and selling are processes entirely antiquated. The nation is the sole producer of commodities. All persons being in the employment of the nation, there is supposed to be no need of exchanges between individuals. A credit-card is issued to each person, which he presents at a national distributing shop when in need of anything, and the amount due the government is punched out. The yearly allowance made to each person Mr. Bellamy does not put into figures. . . . Every person is free to spend his income as he pleases; but it is the same for all, the sole basis on which it is awarded being the fact that the person is a human being. Consequently, cripples and idiots, as well as children, are entitled to the same share of the products of the national industries as is allowed the most stalwart or the most capable, a certain amount of effort only being required, not of performance. Such is the force of public opinion that no one of able body or able mind refuses to exert himself: the comparative results of his effort are not considered. Absolute equality of recompense is thus the rule; and the notion of charity with respect to the infirm in body or mind is dismissed, a credit-card of the usual amount being issued to every such person as his natural right. 'The account of every person, man, woman, and child . . . is always with the nation directly, and never through any intermediary, except, of course, that parents to a certain extent act for children as their guardians. . . . It is by virtue of the relation of individuals to the nation, of their membership in it, that they are entitled to support.' . . . The idea naturally occurred to a considerable number of Bostonians, who had read Mr. Bellamy's socialistic romance with an enthusiastic conviction that here at last the true social gospel was delivered, that associations for the purpose of disseminating the views set forth in the book could not be formed too soon, as the forerunners of this National party of the future. Accordingly, a club, called 'The Boston Bellamy Club,' was started in September, 1888, which was formally organized as 'The Nationalist Club,' in the following December."— N. P. Gilman, "*Nationalism*" *in the United States* (*Quarterly Journal of Economics, Oct.*, 1889).— The Nationalists "have very generally entered into the Populist movement, not because they accept that in its present form as ideal, but because that movement has seemed to give them the best opportunity for the diffusion of their principles; and there can be no doubt that they have given a socialistic bias to this movement. They have also influenced the labor movement, and, with the Socialistic Labor Party, they have succeeded in producing a strong sentiment in favor of independent political action on the part of the wage-earners. Especially noteworthy was the platform for independent political action offered at the meeting of the American Federation of Labor in Chicago in December, 1893."— R. T. Ely, *Socialism, p.* 69.

A. D. 1894.—The American Railway Union and the Pullman Strike.— In May, 1894, some 4,000 workmen, employed in the car shops of the Pullman Company, at the town of Pullman, near Chicago, stopped work, because of the refusal of the company to restore their wages to the standard from which they had been cut down during the previous year and because of its refusal to arbitrate the question. While this strike was in progress, the American Railway Union, a comparatively new but extensive organization of railway employees, formed by and under the presidency of Eugene V. Debs, met in convention at Chicago, and was induced to make the cause of the Pullman workmen its own. The result was a decision on the part of the Union to "boycott" all Pullman cars, ordering its members to refuse to handle cars of that company, on the railways which center at Chicago. This order went into effect on the evening of June 26, and produced the most extensive and alarming paralysis of traffic and business that has ever been experienced in the United States. Acts of violence soon accompanied the strike of the railway employees, but how far committed by the strikers and how far by responsive mobs, has never been made clear. The interruption of

mails brought the proceedings of the strikers within the jurisdiction of the federal courts and within reach of the arm of the United States government. The powers of the national courts and of the national executive were both promptly exercised, to restore order and to stop a ruinous interference with the general commerce of the country. The leaders of the strike were indicted and placed under arrest; United States troops were sent to the scene; President Cleveland, by two solemn proclamations, made known the determination of the Government to suppress a combination which obstructed the United States mails and the movements of commerce between the states. Urgent appeals were addressed by the leaders of the American Railway Union to other labor organizations, with the hope of bringing about a universal strike, in all departments of industry throughout the country; but it failed. The good sense of workingmen in general condemned so suicidal a measure. By the 15th of July the Pullman strike was practically ended, and the traffic of the railways was resumed. President Cleveland appointed a commission to investigate and report on the occurrence and its causes, but the report of the commission has not been published at the time this is printed (November, 1894).

A. D. 1894.—The Coxey Movement.— "A peculiar outcome of the social and political conditions of the winter [of 1893–4] was the organization of various 'armies of the unemployed' for the purpose of marching to Washington and petitioning Congress for aid. The originator of the idea seems to have been one Coxey, of Massillon, Ohio, who took up the proposition that, as good roads and money were both much needed in the country, the government should in the existing crisis issue $500,000,000 in greenbacks, and devote it to the employment of workers in the improvement of the roads. He announced that he would lead an 'Army of the Commonweal of Christ' to Washington to proclaim the wants of the people on the steps of the Capitol on May 1, and he called upon the unemployed and honest laboring classes to join him. On March 25 he set out from Massillon at the head of about a hundred men and marched by easy stages and without disorder through Ohio, Pennsylvania and Maryland, provisions being donated by the towns and villages on the way, or purchased with funds which had been subscribed by sympathizing friends. The numbers of the army increased as it advanced, and groups of volunteers set out to join it from distant states. On May 1 the detachment, numbering about 350, marched to the Capitol, but under an old District law was prevented by the police from entering the grounds. Coxey and another of the leaders, attempting to elude the police and address the assembled crowds, were arrested and were afterwards convicted of a misdemeanor. . . . Somewhat earlier than the start from Massillon, another organization, 'The United States Industrial Army,' headed by one Frye, had started from Los Angeles, California, for Washington, with purposes similar to those of the Coxey force, though not limiting their demands to work on the roads. This force, numbering from six to eight hundred men, availed themselves of the assistance, more or less involuntary, of freight trains on the Southern Pacific Railway as far as St. Louis, from which place they continued on foot. Though observing a degree of military discipline, the various 'armies' were unarmed, and the disturbances that arose in several places in the latter part of April were mostly due to the efforts of the marchers, or their friends in their behalf, to press the railroads into service for transportation. Thus a band under a leader named Kelly, starting from San Francisco, April 4, secured freight accommodations as far as Omaha by simply refusing to leave Oakland until the cars were furnished. The railroads eastward from Omaha refused absolutely to carry them, and they went into camp near Council Bluffs, in Iowa. Then sympathizing Knights of Labor seized a train by force and offered it to Kelly, who refused, however, to accept it under the circumstances, and ultimately continued on foot as far as Des Moines, in Iowa. After a long stay at that place he was finally supplied with flatboats, on which, at the close of this Record, his band, now swollen to some 1,200 men, was floating southward. A band coming east on a stolen train on the Northern Pacific, after overpowering a squad of United States marshals, was captured by a detachment of regular troops at Forsyth, Montana, April 26. Two days later the militia were called out to rescue a train from a band at Mount Sterling, Ohio."—*Political Science Quarterly: Record of Political Events, June*, 1894. —There were straggling movements, from different quarters of the country, in imitation of those described, prolonged through most of the summer of 1894; but the public feeling favorable to them was limited, and they commonly came to an ignominious end.

SODALITATES.—Associations, or clubs, among the ancient Romans, formed originally for social purposes, but finally given a political character.—G. Long, *Decline of the Roman Republic, v.* 3, *ch.* 11.—See, also, COLLEGIA.

SODOR AND MAN, The Bishopric of.—In the 11th century, the peculiar naval empire which the Norsemen had established in the Heb-

rides, and on the neighboring coasts of Ireland and Scotland, under the rulers known as the Hy Ivar, became divided into two parts, called Nordureyer or Norderies and Sudureyer or Suderies, the northern and southern division. The dividing-line was at the point of Ardnamurchan, the most westerly promontory of the mainland of Scotland. "Hence the English bishopric of Sodor and Man — Sodor being the southern division of the Scottish Hebrides, and not now part of any English diocese. . . . The Bishop of Sodor and Man has no seat in the House of Lords, owing, as it is commonly said, to Man not having become an English possession when bishops began to sit as Lords by tenure."—J. H. Burton, *Hist. of Scotland, ch.* 15, *foot-note* (*v.* 2). — See, also, Normans. — Northmen: 10–13th Centuries.

SOFT-SHELL DEMOCRATS, The. See United States of Am.: A. D. 1845–1846.

SOGDIANA.—"North of the Bactrians, beyond the Oxus, on the western slope of Belurdagh, in the valley of the Polytimetus (Zarefshan, i. e. strewing gold), which flows towards the Oxus from the east, but, instead of joining it, ends in Lake Dengis, lay the Sogdiani of the Greeks, the Suguda of the Old Persian inscriptions, and Çughdha of the Avesta, in the region of the modern Sogd. As the Oxus in its upper course separates the Bactrians from the Sogdiani, the Jaxartes, further to the north, separates the latter from the Scyths. According to Strabo, the manners of the Bactrians and Sogdiani were similar, but the Bactrians were less rude. Maracanda (Samarcand), the chief city of the Sogdiani, on the Polytimetus, is said to have had a circuit of 70 stades in the fourth century B. C." — M. Duncker, *Hist. of Antiquity, bk.* 7, *ch.* 1 (*v.* 5). — See, also, Bokhara.

A. D. 1414.—Pillage and destruction by the Armagnacs.—In the civil wars of Armagnacs and Burgundians, during the reign of the insane king Charles VI., the Armagnacs, then having the king in their hands, and pretendedly acting under his commands, laid siege to Soissons and took the city by storm, on the 21st of May, A. D. 1414. "In regard to the destruction committed by the king's army in Soissons, it cannot be estimated. . . . There is not a Christian but would have shuddered at the atrocious excesses committed by this soldiery in Soissons: married women violated before their husbands, young damsels in the presence of their parents and relatives, holy nuns, gentle women of all ranks, of whom there were many in the town: all, or the greater part, were violated against their wills, and known carnally by divers nobles and others, who, after having satiated their own brutal passions, delivered them over without mercy to their servants; and there is no remembrance of such disorder and havoc being done by Christians. . . . Thus was this grand and noble city of Soissons, strong from its situation, walls and towers, full of wealth, and embellished with fine churches and holy relics, totally ruined and destroyed by the army of king Charles, and of the princes who accompanied him. The king, however, before his departure, gave orders for its rebuilding."— Monstrelet, *Chronicles* (*tr. by Johnes*), *bk.* 1, *ch.* 120 (*v.* 1).

Battle of (923).—The revolt against Charles the Simple, which resulted in the overthrow of the Carolingian dynasty, had its beginning in 918. In 922, Robert, Duke of France and Count of Paris, grandfather of Hugh Capet, was chosen and crowned king by the malcontents. On the 15th of June in the next year the most desperate and sanguinary battle of the civil war was fought at Soissons, where more than half of each army perished. The Capetians won the field, but their newly crowned king was among the slain.—Sir F. Palgrave, *Hist. of Normandy and Eng.*, *v.* 2, *p.* 40.

SOMA.—HAOMA.—"It is well known that both in the Veda and the Avesta a plant is mentioned, called Soma (Zend, haoma). This plant, when properly squeezed, yielded a juice, which was allowed to ferment and, when mixed with milk and honey, produced an exhilarating and intoxicating beverage. This Soma juice has the same importance in Vedic and Avestic sacrifices as the juice of the grape had in the worship of Bacchus. The question has often been discussed what kind of plant this Soma could have been. When Soma sacrifices are performed at present, it is confessed that the real Soma can no longer be procured, and that some ci-près, such as Pûtikâs, etc., must be used instead." The Soma of later times seems to have been identified with a species of Sarcostemma. The ancient Soma is conjectured by some to have been the grape, and by others to have been the hop plant.—F. Max

SOUTH AFRICA: The aboriginal inhabitants.—"South Africa in its widest extent is peopled by two great and perfectly distinct indigenous races—the Kafirs and the Hottentots. The affinity of the Kafir tribes, ethnographically including the Kafirs proper and the people of Congo, is based upon the various idioms spoken by them, the direct representatives of a common but now extinct mother tongue. The aggregate of languages is now conventionally known as the A-bantu, or, more correctly, the Bantu linguistic system. The more common term Kafir, from the Arabic Kâfir = infidel, really represents but a small section of this great family, and being otherwise a term of reproach imposed upon them by strangers, is of course unknown to the people themselves. All the Bantu tribes are distinguished by a dark skin and woolly hair, which varies much in length and quality, but is never sleek or straight. . . . According to its geographical position the Bantu system is divided into the Eastern group, from its principal representatives known as the Ama-Zulu and Ama-Khosa or Kafir proper, the Central, or Be-tchuana group, and the Western or O-va-Herero, or Damara group. . . . The northern division of these Bantus bears the name of Ama-Zulu, and they are amongst the best representatives of dark-coloured races. The Zulus are relatively well developed and of large size, though not surpassing the average height of Europeans, and with decidedly better features than the Ama-Khosa. . . . The most wide-spread and most numerous of all these Kafir tribes are the Bechuanas [including the Basutos], their present domain stretching from the upper Orange river northwards to the Zambesi, and over the west coast highland north of Namaqualand; of this vast region, however, they occupy the outskirts only. . . . The Hottentots, or more correctly Koi-Koin (men), have no material features in common with the great Bantu family, except their woolly hair, though even this presents some considerable points of difference. Their general type is that of a people with a peculiar pale yellow-brown complexion, very curly 'elf-lock' or matted hair, narrow forehead, high cheek-bones projecting side-ways, pointed chin, body of medium size, rather hardy than strong, with small hands and feet, and platynocephalous cranium. . . . The Hottentots are properly divided into three groups: the Colonial, or Hottentots properly so called,

dwelling in Cape Colony, and thence eastwards to the borders of Kafirland . . . ; the Korana, settled mainly on the right bank of the Orange river . . . ; lastly, the Namaqua, whose domain embraces the western portion of South Africa, bordering eastwards on the Kalahari desert."—Hellwald-Johnston, *Africa* (*Stanford's Compendium*), *ch.* 25.—See, also, AFRICA: THE INHABITING RACES.

A. D. 1486-1806.—Portuguese discovery.—Dutch possession.—English acquisition.—The Cape of Good Hope, "as far as we know, was first doubled by Bartholomew Diaz in 1486 [see PORTUGAL: A. D. 1463–1498]. He, and some of the mariners with him, called it the Cape of Torments, or Capo Tormentoso, from the miseries they endured. The more comfortable name which it now bears was given to it by King John of Portugal, as being the new way discovered by his subjects to the glorious Indies. Diaz, it seems, never in truth saw the Cape, but was carried past it to Algoa Bay. . . . Vasco da Gama, another sailor hero, said to have been of royal Portuguese descent, followed him in 1497. He landed to the west of the Cape. . . . Vasco da Gama did not stay long at the Cape, but proceeding on went up the East Coast as far as our second South African colony, which bears the name which he then gave to it. He called the land Tierra de Natal, because he reached it on the day of our Lord's Nativity. The name has stuck to it ever since and no doubt will now be preserved. From thence Da Gama went on to India. . . . The Portuguese seem to have made no settlement at the Cape intended even to be permanent; but they did use the place during the 16th and first half of the next century as a port at which they could call for supplies and assistance on their way out to the East Indies. The East had then become the great goal of commerce to others besides the Portuguese. In 1600 our own East India Company was formed, and in 1602 that of the Dutch. Previous to those dates, in 1591, an English sailor, Captain Lancaster, visited the Cape, and in 1620 Englishmen landed and took possession of it in the name of James I. But nothing came of these visitings and declarations, although an attempt was made by Great Britain to establish a house of call for her trade out to the East. For this purpose a small gang of convicts was deposited on Robben Island, which is just off Capetown, but as a matter of course the convicts quarrelled with themselves and the Natives, and came to a speedy end. In 1595 the Dutch came, but did not then remain. It was not till 1652 that the first Europeans who were destined to be the pioneer occupants of the new land were put on shore at the Cape of Good Hope, and thus made the first Dutch settlement. Previous to that the Cape had in fact been a place of call for vessels of all nations going and coming to and from the East. But from this date, 1652, it was to be used for the Dutch exclusively. . . . The home Authority at this time was not the Dutch Government, but the Council of Seventeen at Amsterdam, who were the Directors of the Dutch East India Company. . . . From 1658, when the place was but six years old, there comes a very sad record indeed. The first cargo of slaves was landed at the Cape from the Guinea Coast. In this year, out of an entire population of 360, more than a half were slaves. The total number of these was 187. To control them and to defend the place there were but 113 European men capable of bearing arms. This slave element at once became antagonistic to any system of real colonization, and from that day to this has done more than any other evil to retard the progress of the people. It was extinguished, much to the disgust of the old Dutch inhabitants, under Mr. Buxton's Emancipation Act in 1834;—but its effects are still felt." The new land of which the Dutch had taken possession "was by no means unoccupied or unpossessed. There was a race of savages in possession, to whom the Dutch soon gave the name of Hottentots. [The name was probably taken from some sound in their language which was of frequent occurrence; they seem to have been called 'Ottentoos,' 'Hotnots,' 'Hottentotes,' 'Hodmodods,' and 'Hadmandods,' promiscuously.—Foot-note.] . . . Soon after the settlement was established the burghers were forbidden to trade with these people at all, and then hostilities commenced. The Hottentots found that much, in the way of land, had been taken from them and that nothing was to be got. They . . . have not received, as Savages, a bad character. They are said to have possessed fidelity, attachment, and intelligence. . . . But the Hottentot, with all his virtues, was driven into rebellion. There was some fighting, in which the natives of course were beaten, and rewards were offered, so much for a live Hottentot, and so much for a dead one. This went on till, in 1672, it was found expedient to purchase land from the natives. A contract was made in that year to prevent future cavilling, as was then alleged, between the Governor and one of the native princes, by which the district of the Cape of Good Hope was ceded to the Dutch for a certain nominal price. . . . But after a very early period—1684—there was no further buying of land. . . . The land was then annexed by Europeans as convenience required. In all this the Dutch of those days did very much as the English have done since. . . . The Hottentot . . . is said to be nearly gone, and, being a yellow man, to have lacked strength to endure European seductions. But as to the Hottentot and his fate there are varied opinions. I have been told by some that I have never seen a pure Hottentot. Using my own eyes and my own idea of what a Hottentot is, I should have said that the bulk of the population of the Western Province of the Cape Colony is Hottentot. The truth probably is that they have become so mingled with other races as to have lost much of their identity; but that the race has not perished, as have the Indians of North America and the Maoris. . . . The last half of the 17th and the whole of the 18th century saw the gradual progress of the Dutch depôt,—a colony it could hardly be called,—going on in the same slow determined way, and always with the same purpose. It was no colony because those who managed it at home in Holland, and they who at the Cape served with admirable fidelity their Dutch masters, never entertained an idea as to the colonization of the country. . . . In 1795 came the English. In that year the French Republican troops had taken possession of Holland [see FRANCE: A. D. 1795 (JUNE—DECEMBER)], and the Prince of Orange, after the manner of dethroned potentates, took refuge in England. He gave an authority, which was dated from Kew, to the

Governor of the Cape to deliver up all and everything in his hands to the English forces. On the arrival of the English fleet there was found to be, at the same time, a colonist rebellion. . . . In this double emergency the poor Dutch Governor, who does not seem to have regarded the Prince's order as an authority, was sorely puzzled. He fought a little, but only a little, and then the English were in possession. . . . In 1797 Lord Macartney came out as the first British Governor. Great Britain at this time took possession of the Cape to prevent the French from doing so. No doubt it was a most desirable possession, as being a half-way house for us to India as it had been for the Dutch. But we should not, at any rate then, have touched the place had it not been that Holland, or rather the Dutch, were manifestly unable to retain it. . . . Our rule over the Dutchmen was uneasy and unprofitable. Something of rebellion seems to have been going on during the whole time. . . . When at the peace of Amiens in 1802 it was arranged that the Cape of Good Hope should be restored to Holland [see FRANCE: A. D. 1801–1802], English Ministers of State did not probably grieve much at the loss. . . . But the peace of Amiens was delusive, and there was soon war between England and France. Then again Great Britain felt the necessity of taking the Cape, and proceeded to do so on this occasion without any semblance of Dutch authority. At that time whatever belonged to Holland was almost certain to fall into the hands of France. In 1805 . . . Sir David Baird was sent with half a dozen regiments to expel, not the Dutch, but the Dutch Governor and the Dutch soldiers from the Cape. This he did easily, having encountered some slender resistance; and thus in 1806, on the 19th January, after a century and a half of Dutch rule, the Cape of Good Hope became a British colony."—A. Trollope, *South Africa, v.* 1, *ch.* 2.

A. D. 1806-1881.—The English and the Dutch Boers.—The "Great Trek."—Successive Boer republics of Natal, Orange Free State, and the Transvaal, absorbed in the British dominions.—The Boer War.—The early history of the Cape Colony, after it became a dependency of the British Crown, "is a record of the struggles of the settlers, both English and Dutch, against the despotic system of government established by Lord Charles Somerset; of Kaffir wars, in which the colonists were often hard put to it to hold their own; and of the struggle for the liberty of the Press, sustained with success by John Fairbairn, and Thomas Pringle, the poet of South Africa, the Ovid of a self-chosen exile. For a time the Dutch and English settlers lived in peace and amity together, but the English efforts to alleviate the condition of, and finally emancipate the slaves, severed the two races. The Dutch settlers held the old Biblical notions about slavery, and they resented fiercely the law of 1833 emancipating all slaves throughout the colony in 1834. The Boers at once determined to 'trek,' to leave the colony which was under the jurisdiction of the English law, and find in the South African wilderness, where no human law prevailed, food for their flocks, and the pastoral freedom of Jacob and of Abraham. The Boers would live their own lives in their own way. They had nothing in common with the Englishman, and they wished for nothing in common. . . . They were a primitive people, farming, hunting, reading the Bible, pious, sturdy, and independent; and the colonial Government was by no means willing to see them leaving the fields and farms that they had colonised, in order to found fresh states outside the boundaries of the newly acquired territory. But the Government was powerless; it tried, and tried in vain, to prevent this emigration. There was no law to prevent it. . . . So, with their waggons, their horses, their cattle and sheep, their guns, and their few household goods, the hardy Boers struck out into the interior and to the north-east, in true patriarchal fashion [the migration being known as the Great Trek], seeking their promised land, and that 'desolate freedom of the wild ass' which was dear to their hearts. They founded a colony at Natal, fought and baptized the new colony in their own blood. The Zulu chief, Dingaan, who sold them the territory, murdered the Boer leader, Peter Retief, and his 79 followers as soon as the deed was signed. This was the beginning of the Boer hatred to the native races. The Boers fought with the Zulus successfully enough, fought with the English who came upon them less successfully. The Imperial Government decided that it would not permit its subjects to establish any independent Governments in any part of South Africa. In 1843, after no slight struggle and bloodshed, the Dutch republic of Natal ceased to be, and Natal became part of the British dominion. Again the Boers, who were unwilling to remain under British rule, 'trekked' northward; again a free Dutch state was founded—the Orange Free State. Once again the English Government persisted in regarding them as British subjects, and as rebels if they refused to admit as much. Once again there was strife and bloodshed, and in 1848 the Orange settlement was placed under British authority, while the leading Boers fled for their lives across the Vaal River, and, obstinately independent, began to found the Transvaal Republic. After six years, however, of British rule in the Orange territory the Imperial Government decided to give it back to the Boers, whose stubborn desire for self-government, and unchanging dislike for foreign rule, made them practically unmanageable as subjects. In April 1854 a convention was entered into with the Boers of the Orange territory, by which the Imperial Government guaranteed the future independence of the Orange Free State. Across the Vaal River the Transvaal Boers grew and flourished after their own fashion, fought the natives, established their republic and their Volksraad. But in 1877 the Transvaal republic had been getting rather the worst of it in some of these struggles, and certain of the Transvaal Boers seem to have made suggestions to England that she should take the Transvaal republic under her protection. Sir Theophilus Shepstone was sent out to investigate the situation. He seems to have entirely misunderstood the condition of things, and to have taken the frightened desires of a few Boers as the honest sentiments of the whole Boer nation. In an evil hour he hoisted the English flag in the Transvaal, and declared the little republic a portion of the

territory of the British Crown. As a matter of fact, the majority of the Boers were a fierce, independent people, very jealous of their liberty, and without the least desire to come under the rule, to escape which they had wandered so far from the earliest settlements of their race. . . . The Boers of the Transvaal sent deputation after deputation to England to appeal, and appeal in vain, against the annexation. Lord Carnarvon had set his whole heart upon a scheme of South African confederation; his belief in the ease with which this confederation might be accomplished was carefully fostered by judiciously coloured official reports. . . . Sir Bartle Frere, 'as a friend,' advised the Boers 'not to believe one word' of any statements to the effect that the English people would be willing to give up the Transvaal. 'Never believe,' he said, 'that the English people will do anything of the kind.' When the chief civil and military command of the eastern part of South Africa was given to Sir Garnet Wolseley, Sir Garnet Wolseley was not less explicit in his statements. . . . In spite of the announcements of Sir Bartle Frere, Sir Garnet Wolseley, and Sir Owen Lanyon, the disaffected Boers were not without more or less direct English encouragement. The Boer deputations had found many friends in England. . . . One of those who thus sympathised was Mr. Gladstone. In his Midlothian speeches he denounced again and again the Conservative policy which had led to the annexation of the Transvaal. . . . While all the winds of the world were carrying Mr. Gladstone's words to every corner of the earth, it is not surprising that the Boers of the Transvaal . . . should have caught at these encouraging sentences, and been cheered by them, and animated by them to rise against the despotism denounced by a former Prime Minister of England. . . . For some time there seemed to be no reasonable chance of liberty, but in the end of 1880 the Boers saw their opportunity. . . . There were few troops in the Transvaal. The Boer hour had come. As in most insurrections, the immediate cause of the rising was slight enough. A Boer named Bezhuidenot was summoned by the landdrost of Potchefstrom to pay a claim made by the Treasury officials at Pretoria. Bezhuidenot resisted the claim, which certainly appears to have been illegal. . . . The landdrost attached a waggon of Bezhuidenot's, and announced that it would be sold to meet the claim. On November 11 the waggon was brought into the open square of Potchefstrom, and the sheriff was about to begin the sale, when a number of armed Boers pulled him off and carried the waggon away in triumph. They were unopposed, as there was no force in the town to resist them. The incident, trifling in itself, of Bezhuidenot's cart, was the match which fired the long-prepared train. Sir Owen Lanyon sent some troops to Potchefstrom; a wholly unsuccessful attempt was made to arrest the ringleaders of the Bezhuidenot affair; it was obvious that a collision was close at hand. . . . On Monday, December 13, 1880, almost exactly a month after the affair of Bezhuidenot's waggon, a mass meeting of Boers at Heidelberg proclaimed the Transvaal once again a republic, established a triumvirate Government, and prepared to defend their republic in arms. . . . The news of the insurrections aroused the Cape Government to a sense of the seriousness of the situation. Movements of British troops were at once made to put the insurgents down with all speed. It is still an unsettled point on which side the first shot was fired. There were some shots exchanged at Potchefstrom on December 15. . . . Previously to this the 94th regiment had marched from Leydenberg to reinforce Pretoria on December 5, and had reached Middleburgh about a week later. On the way came rumours of the Boer rising. . . . Colonel Anstruther seems to have felt convinced that the force he had with him was quite strong enough to render a good account of any rebels who might attempt to intercept its march. The whole strength of his force, however, officers included, did not amount to quite 250 men. The troops crossed the Oliphants River, left it two days' march behind them, and on the morning of the 20th were marching quietly along with their long line of waggons and their band playing 'God save the Queen' under the bright glare of the sun. Suddenly, on the rising ground near the Bronkhorst Spruit a body of armed Boers appeared. A man galloped out from among them — Paul de Beer — with a flag of truce. Colonel Anstruther rode out to meet him, and received a sealed despatch warning the colonel that the British advance would be considered as a declaration of war. Colonel Anstruther replied simply that he was ordered to go to Pretoria, and that he should do so. Each man galloped back to his own force, and firing began. In ten minutes the fight, if fight it can be called, was over. The Boers were unrivalled sharpshooters, had marked out every officer; every shot was aimed, and every shot told. The Boers were well covered by trees on rising ground; the English were beneath them, had no cover at all, and were completely at their mercy. In ten minutes all the officers had fallen, some forty men were killed, and nearly double the number wounded. Colonel Anstruther, who was himself badly wounded, saw that he must either surrender or have all his men shot down, and he surrendered. . . . Colonel Anstruther, who afterwards died of his wounds, bore high tribute in his despatch to the kindness and humanity of the Boers when once the fight was done. . . . Sir George Colley struggled bravely for a while to make head against the Boers. At Lang's Nek and Ingago he did his best, and the men under him fought gallantly, but the superior positions and marksmanship of the Boers gave them the advantage in both fights. Under their murderous fire the officers and men fell helplessly. Officer after officer of a regiment would be shot down by the unerring aim of the Boers while trying to rally his men, while the British fire did comparatively slight damage, and the troops seldom came to sufficiently close quarters to use the bayonet. But the most fatal battle of the campaign was yet to come. Sir Evelyn Wood had arrived at the Cape with reinforcements, had met Sir George Colley, and had gone to Pietermaritzburg to await the coming of further reinforcements. On Saturday night, February 26, Sir George Colley with a small force moved out of the camp at Mount Prospect, and occupied the Majuba Hill, which overlooked the Boer camps on the flat beyond Lang's Nek. Early next morning the Boers attacked the hill; there was some desultory firing for a while, under cover of which three Boer storming parties ascended the hill almost unseen. The British

were outflanked and surrounded, a deadly fire was poured in upon them from all sides. The slaughter was excessive. As usual the officers were soon shot down. Sir George Colley, who was directing the movements as coolly as if at review, was killed just as he was giving orders to cease firing. The British broke and fled, fired upon as they fled by the sharpshooters. Some escaped; a large number were taken prisoners. So disastrous a defeat had seldom fallen upon British arms. The recent memory of Maiwand was quite obliterated. That was the last episode of the war. General Wood agreed to a temporary armistice. There had been negotiations going on between the Boers and the British before the Majuba Hill defeat, which need never have occurred if there had not been a delay in a reply of Kruger's to a letter of Sir George Colley's. The negotiations were now resumed, and concluded in the establishment of peace, on what may be called a Boer basis. The republic of the Transvaal was to be re-established, with a British protectorate and a British Resident indeed, but practically granting the Boers the self-government for which they took up arms."— J. H. McCarthy, *England under Gladstone, ch.* 5.

A. D. 1811-1868.—The Kafir wars.—British absorption of Kafraria.—"In 1811 the first Kafir war was brought on by the depredations of those warlike natives on the Boers of the eastern frontier; a war to the knife ensued, the Kafirs were driven to the other side of the Great Fish River, and military posts were formed along the border. A second war, however, broke out in 1818, when the Kafirs invading the colony drove the farmers completely out of the country west of the Great Fish River, penetrating as far as Uitenhage. But the Kafirs could not stand against the guns of the colonists, and the second war terminated in the advance of an overwhelming force into Kafirland, and the annexation of a large slice of territory, east of the Great Fish River, to the colony. . . . For a third time, in 1835, a horde of about 10,000 fighting men of the Kafirs spread fire and slaughter and pillage over the eastern districts, a war which led, as the previous ones had done, to a more extended invasion of Kafraria by the British troops, and the subjugation of the tribes east of the Kei river. . . . A fourth great Kafir war in 1846, provoked by the daring raids of these hostile tribes and their bold invasions of the colony was also followed up by farther encroachments on Kafir territory, and in 1847 a proclamation was issued extending the frontier to the Orange river on the north and to the Keiskamma river in the east, British sovereignty being then also declared over the territory extending from the latter river eastward to the Kei, though this space was at first reserved for occupation by the Kafirs and named British Kafraria. But peace was restored only for a brief time; in 1857 a fresh Kafir rebellion had broken out, and for two years subsequently a sort of guerilla warfare was maintained along the eastern frontier, involving great losses of life and destruction of property. In 1863 this last Kafir war was brought to a conclusion, and British Kafraria was placed under the rule of European functionaries and incorporated with the colony. In 1868 the Basutos [or Eastern Bechuanas], who occupy the territory about the head of the Orange river, between its tributary the Caledon and the summits of the Drakenberg range, and who had lived under a semi-protectorate of the British since 1848, were proclaimed British subjects. . . . Subsequently large portions of formerly independent Kafraria between the Kei river and the southern border of Natal have passed under the government of the Cape."—Hellwald-Johnston, *Africa* (*Stanford's Compendium*), *ch.* 23.

A. D. 1867-1871.—Discovery of Diamonds. —Annexation of Griqualand west to Cape Colony. See Griquas.

A. D. 1877-1879.—The Zulu War.—"At this time [1877] besides the three English Colonies of Cape Town, Natal, and the lately formed Griqualand, there were two independent Dutch Republics,—the Orange Free State, and the Transvaal. Much of the white population even of the English Provinces was Dutch, and a still larger proportion consisted of reclaimed or half-reclaimed natives. Thus . . . there lay behind all disputes the question which invariably attends frontier settlements — the treatment of the native population. This difficulty had become prominent in the year 1873 and 1874, when the fear of treachery on the part of a chief of the name of Langalibalele located in Natal had driven the European inhabitants to unjustifiable violence. The tribe over which the chief had ruled had been scattered and driven from its territory, the chief himself brought to trial, and on most insufficient evidence sentenced to transportation. It was the persuasion that he was intriguing with external tribes which had excited the unreasoning fear of the colonists. For beyond the frontier there lay the Zulus, a remarkable nation, organised entirely upon a military system, and forming a great standing army under the despotic rule of their King Cetchwayo. Along the frontier of Natal the English preserved friendly relations with this threatening chief. But the Dutch Boers of the Transvaal, harsh and arbitrary in their treatment of natives, had already involved themselves in a war with a neighbouring potentate of the name of Secocoeni, and had got into disputes with Cetchwayo, which threatened to bring upon the European Colonies an indiscriminate assault." Lord Carnarvon thought it practicable to cure the troubles in South Africa by a confederation of the colonies. "The difficulty of the situation was so obvious to the Colonial Minister that he had chosen as High Commissioner a man whose experience and energy he could thoroughly trust. Unfortunately in Sir Bartle Frere he had selected a man not only of great ability, but one who carried self-reliance and imperialist views to an extreme. . . . The danger caused by the reckless conduct of the Boers upon the frontier, and their proved incapacity to resist their native enemies, had made it a matter of the last importance that they should join the proposed Confederation, and thus be at once restrained and assisted by the central power. Sir Theophilus Shepstone had been charged with the duty of bringing the Transvaal Republic to consent to an arrangement of this sort. . . . Unable to persuade the Boers to accept his suggestions for an amicable arrangement, he proceeded, in virtue of powers intrusted to him, to declare the Republic annexed, and to take over the government. This high-handed act brought with it, as some of its

critics in the House of Commons had prophesied, disastrous difficulties. Not only were the Boers themselves almost as a matter of course disaffected, but they handed over to the Imperial Government all their difficulties and hostilities. They were involved in disputes with both their barbarous neighbours. . . . In 1875 they had made demands upon Cetchwayo, the most important of which was a rectification of frontier largely in their own favour. . . . Commissioners were appointed in 1878 to inquire into the rights of the case. . . . The Commissioners arrived at a unanimous decision against the Dutch claims. . . . But before the Treaty could be carried out it required ratification from the High Commissioner, and it came back from his hands clogged with formidable conditions. . . . While . . . he accepted the boundary report, he determined to make it an opportunity for the destruction of Cetchwayo's power. In December a Special Commission was despatched to meet the Zulu Envoys, to explain the award, but at the same time to demand corresponding guarantees from the King. When these were unfolded they appeared to be the abolition of his military system and the substitution of a system of tribal regiments approved bythe British Government, the acceptance of a British Resident by whose advice he was to act, the protection of missionaries, and the payment of certain fines for irregularities committed by his subjects. These claims were thrown into the form of an ultimatum, and Cetchwayo was given thirty days to decide. . . . It was to be submission or war. It proved to be war. Sir Bartle Frere had already prepared for this contingency; he had detained in South Africa the troops which should have returned to England, and had applied to the Home Government for more. . . . Lord Chelmsford was appointed to the command of the troops upon the frontier, and on the 12th, the very day on which the time allowed for the acceptance of the ultimatum expired, the frontier was crossed. The invasion was directed towards Ulundi, the Zulu capital. . . . The first step across the frontier produced a terrible disaster. The troops under the immediate command of Lord Chelmsford encamped at Isandlana without any of the ordinary precautions, and in a bad position. . . . In this unprotected situation Lord Chelmsford, while himself advancing to reconnoitre, left two battalions of the 24th with some native allies under Colonel Pulleine, who were subsequently joined by a body of 3,000 natives and a few Europeans under Colonel Durnford. The forces left in the camp were suddenly assaulted by the Zulus in overwhelming numbers and entirely destroyed [January 22, 1879]. It was only the magnificent defence by Chard and Bromhead of the post and hospital at Rorke's Drift which prevented the victorious savages from pouring into Natal. Lord Chelmsford on returning from his advance hurried from the fearful scene of slaughter back to the frontier. For the moment all was panic; an immediate irruption of the enemy was expected. But when it was found that Colonel Wood to the west could hold his own though only with much rough fighting, and that Colonel Pearson, towards the mouth of the river, after a successful battle had occupied and held Ekowe, confidence was re-established. But the troops in Ekowe were cut off from all communication except by means of heliographic signals, and the interest of the war was for a while centred upon the beleaguered garrison. With extreme caution, in spite of the clamorous criticism levelled against him, Lord Chelmsford refused to move to its rescue till fully reinforced. Towards the end of March however it was known that the provisions were running low, and on the 29th an army of 6,000 men again crossed the frontier. On this occasion there was no lack of precaution. . . . As they approached the fortress, they were assaulted at Gingilovo, their strong formation proved efficient against the wild bravery of their assailants, a complete victory was won, and the garrison at Ekowe rescued. A day or two earlier an even more reckless assault upon Colonel Wood's camp at Kambula was encountered with the same success. But for the re-establishment of the English prestige it was thought necessary to undertake a fresh invasion of the country. . . . Several attempts at peace had been made on the part of the Zulus. But their ambassadors were never, in the opinion of the English generals, sufficiently accredited to allow negotiations to be opened. Yet it would appear that Cetchwayo was really desirous of peace, according to his own account even the assault at Isandlana was an accident, and the two last great battles were the result of local efforts. At length in July properly authorised envoys came to the camp. Terms of submission were dictated to them, but as they were not at once accepted a final battle was fought resulting completely in favour of the English, who then occupied and burnt Ulundi, the Zulu capital. . . . Sir Garnet Wolseley was . . . again sent out with full powers to effect a settlement. His first business was to capture the King. When this was done he proceeded to divide Zululand into thirteen districts, each under a separate chief; the military system was destroyed; the people were disarmed and no importation of arms allowed; a Resident was to decide disputes in which British subjects were involved. The reception of missionaries against the will of the people was not however insisted on."—J. F. Bright, *Hist. of England, period* 4, *pp.* 545-550.

A. D. 1885-1893.—British acquisition of Matabeleland or Zambesia.—Dominion of the British South Africa Company.—War with King Lobengula.—"The Boers, ever on the lookout for new lands into which to trek, had long ago fixed their eyes on the country north of the Limpopo, known generally as Matabeleland, ruled over by Lobengula, the son of the chief of the Matabeles. . . . The reports of Mauch, Baines, and others, of the rich gold mines contained in this territory, were well known. . . . Other travellers and sportsmen, Mohr, Oates, Selous, gave the most favourable accounts not only of the gold of the country, but of the suitability of a large portion of the high plateau known as Mashonaland for European settlement and agricultural operations. When Sir Charles Warren was in Bechuanaland in 1885, several of his officers made journeys to Matabeleland, and their reports all tended to show the desirability of taking possession of that country; indeed Sir Charles was assured that Lobengula would welcome a British alliance as a protection against

the Boers, of whose designs he was afraid. . . . As a result of Sir Charles Warren's mission to Bechuanaland, and of the reports furnished by the agents he sent into Matabeleland, the attention of adventurers and prospectors was more and more drawn towards the latter country. The Portuguese . . . had been electrified into activity by the events of the past two years. That the attention of the British Government was directed to Matabeleland even in 1887 is evident from a protest in August of that year, on the part of Lord Salisbury, against an official Portuguese map claiming a section of that country as within the Portuguese sphere. Lord Salisbury then clearly stated that no pretensions of Portugal to Matabeleland could be recognised, and that the Zambesi should be regarded as the natural northern limit of British South Africa. The British Prime Minister reminded the Portuguese Government that according to the Berlin Act no claim to territory in Central Africa could be recognised that was not supported by effective occupation. The Portuguese Government maintained (it must be admitted with justice) that this applied only to the coast, but Lord Salisbury stood firmly to his position. . . . Germans, Boers, Portuguese, were all ready to lay their hands on the country claimed by Lobengula. England stepped in and took it out of their hands; and at the worst she can only be accused of obeying the law of the universe, 'Might is Right.' By the end of 1887 the attempts of the Transvaal Boers to obtain a hold over Matabeleland had reached a crisis. It became evident that no time was to be lost if England was to secure the Zambesi as the northern limit of extension of her South African possessions. Lobengula himself was harassed and anxious as to the designs of the Boers on the one hand, and the doings of the Portuguese on the north of his territory on the other. In the Rev. J. Smith Moffat, Assistant Commissioner in Bechuanaland, England had a trusty agent who had formerly been a missionary for many years in Matabeleland, and had great influence with Lobengula. Under the circumstances, it does not seem to have been difficult for Mr. Moffat to persuade the King to put an end to his troubles by placing himself under the protection of Great Britain. On 21st March 1888, Sir Hercules Robinson, Governor of Cape Colony, and Her Majesty's High Commissioner for South Africa, was able to inform the Home Government that on the previous 11th February Lobengula had appended his mark to a brief document which secured to England supremacy in Matabeleland over all her rivals. . . . The publication of the treaty was, as might be expected, followed by reclamations both on the part of the Transvaal and of Portugal. Before the British hold was firmly established over the country attempts were made by large parties of Boers to trek into Matabeleland. . . . Individual Boers as well, it must be said, as individual Englishmen at the kraal of Lobengula, attempted to poison the mind of the latter against the British. But the King remained throughout faithful to his engagements. Indeed, it was not Lobengula himself who gave any cause for anxiety during the initial stage of the English occupation. He is, no doubt, a powerful chief, but even he is obliged to defer to the wishes of his 'indunas' and his army. . . . Lobengula himself kept a firm hand over his warriors, but even he was at times apprehensive that they might burst beyond all control. Happily this trying initial period passed without disaster. . . . No sooner was the treaty signed than Lobengula was besieged for concessions of land, the main object of which was to obtain the gold with which the country was said to abound, especially in the east, in Mashonaland." The principal competitors for what was looked upon as the great prize were two syndicates of capitalists, which finally became amalgamated, in 1889, under the skilful diplomacy of Mr. Cecil J. Rhodes, forming the great British South Africa Company, about which much has been heard in recent years. "The principal field of the operations of the British South Africa Company was defined in the charter to be 'the region of South Africa lying immediately to the north of British Bechuanaland, and to the north and west of the South African Republic, and to the west of the Portuguese dominions.' The Company was also empowered to acquire any further concessions, if approved of by 'Our Secretary of State.' . . . The Company was empowered to act as the representative of the Imperial Government, without, however, obtaining any assistance from the Government to bear the expense of the administration. . . . The capital of the Company was a million sterling. It is not easy to define the relations of the Chartered Company to the various other companies which had mining interests in the country. In itself it was not a consolidation of the interests of those companies. Its functions were to administer the country and to work the concessions on behalf of the Concessionaires, in return for which it was to retain fifty per cent. of the profits. . . . When the British South African Company was prepared to enter into active occupation of the territories which they were authorised to exploit, they had on the one hand the impis of Lobengula eager to wash their spears in white blood; on the south the Boers of the Transvaal, embittered at being prevented from trekking to the north of the Limpopo, and on the east and on the north-east the Portuguese trying to raise a wall of claims and historical pretensions against the tide of English energy. . . . An agreement was concluded between England and Portugal in August 1890, by which the eastern limits of the South Africa Company's claims were fixed, and the course of the unknown Sabi River, from north to south, was taken as a boundary. But this did not satisfy either Portugal or the Company, and the treaty was never ratified. . . . A new agreement [was] signed on the 11th June 1891, under which Portugal can hardly be said to have fared so well as she would have done under the one repudiated by the Cortes in the previous year. The boundary between the British Company's territories was drawn farther east than in the previous treaty. The line starting from the Zambesi near Zumbo runs in a general south-east direction to a point where the Mazoe River is cut by the 33rd degree of east longitude. The boundary then runs in a generally south direction to the junction of the Lunde and the Sabi, where it strikes south-west to the north-east corner of the South African Republic, on the Limpopo. In tracing the frontier along the slope of the plateau, the Portuguese sphere was not allowed to come farther west than 32° 30′ E. of Greenwich, nor the British sphere east

of 33° E. A slight deflection westwards was made so as to include Massi Kessi in the Portuguese sphere. . . . According to the terms of the arrangement, the navigation of the Zambesi and the Shiré was declared free to all nations." —J. S. Keltie, *The Partition of Africa, ch.* 18.— By the spring of 1893 the British South Africa Company had fairly laid hands upon its great dominion of Zambesia. Matabele was swarming with searchers for gold; a railroad from the port of Beira, through Portuguese territory, was in progress; a town at Fort Salisbury was rising. Lobengula, the Matabele king, repented speedily of his treaty and repudiated the construction put on it by the English. Quarrels arose over the Mashonas, whom the Matabeles held in slavery and whom the new lords of the country protected. Both parties showed impatience for war, and it was not long in breaking out. The first shots were exchanged early in October; before the end of the year the British were complete masters of the country, and Lobengula had fled from his lost kingdom, to die, it is said, during the flight. There were two pitched battles, in which the natives suffered terribly. They obtained revenge in one instance, only, by cutting off a party of thirty men, not one of whom survived.

SOUTH AFRICA COMPANY, The British. See AFRICA: A. D. 1884–1891; and SOUTH AFRICA: A. D. 1885–1893.

SOUTH AUSTRALIA.—"The title is a misnomer. South Australia comprises nearly a third of the Continent of Australia, through which it extends from south to north. It is bounded on the west by the colony of Western Australia, and on the east by those of Queensland, New South Wales and Victoria. In area, it covers 903,425 square miles, and is larger than the United Kingdom, France, Germany, Belgium, Italy, Spain and Portugal put together. . . . The southern coast-line, from the border of Victoria to that of Western Australia, measures at least 2,000 miles. From Cape Jervis, at the southern extremity of the Gulf of St. Vincent, a succession of mountain ranges runs almost due north for 200 miles. . . . Eastward of the Mount Lofty Range endless plains stretch away into New South Wales and Victoria, and westward those in which Adelaide is situated are bounded by the Gulf. A vast, shallow depression occurs to the north and west of the Flinders Range, which in some places is below the level of the sea. The only navigable river in the southern part of the colony is the Murray, which, entering it from the east between New South Wales and Victoria, pursues a tortuous course. The streams which descend from the hills are roaring torrents in the time of winter floods, but the rapidity of their fall is such that they speedily exhaust themselves, and in summer are mere rivulets connecting chains of ponds. . . . On the map the lakes of South Australia cover a considerable surface but they have little in the way of beauty, interest, or value. . . . It has been said that explorers do not usually deal in half-lights; they find either a paradise or just the reverse, and in their descriptions are prodigal of superlatives. Hence, perhaps, the hideous picture of Sturt's Stony Desert that was so highly overdrawn. It has proved to be good sheep-country, and the area of actual wilderness is shrinking every year."—*Descriptive Sketch of South Australia*, by Henry T. Burgess, in *Australasia Illustrated, v.* 2, *pp.* 813–15.

A. D. 1834-1836.—Early Settlement of the Colony.—"Two names are conspicuous above all others in the history of the early settlement. They are those of Edward Gibbon Wakefield and George Fife Angas. To the former belongs the honour of devising a new method for successful colonization, and to the latter that of being chiefly instrumental in bringing it to the test of actual experiment. . . . The colonization of South Australia was undertaken on altogether novel principles. It was mooted in England at a period when emigration projects were popular, for times were bad. The failure of some attempts, and notably that at Swan River in Western Australia, led acute observers to see that the land-grant system was fatal to prosperity, and among those who suggested better methods Mr. Wakefield took a foremost place. The essential principle of his scheme was that land should be exchanged for labour instead of being given away, or alienated for a merely nominal sum. The idea of founding a colony somewhere in Southern Australia altogether independent of previous settlements found powerful advocates, and after some years of agitation in public meetings and otherwise an Act was passed by the Imperial Parliament of 1834 in which it was embodied. Under that Act Commissioners were appointed and empowered to undertake the enterprise. It was stipulated that no part of the expense incurred should fall upon the Home Government. The Commissioners were authorized to borrow £50,000 to defray the cost of emigration, and a further sum of £200,000 for the general charges of founding the colony. By way of securing a sort of guarantee, they were restrained from exercising their general powers until the sum of £20,000 had been invested in exchequer bills in the names of trustees, and 35,000 acres of land were sold. It may be mentioned here that one clause in the Act expressly prohibited the transportation of convicts to the colony. . . . Though the South Australian Association that had been formed to carry out the project had succeeded thus far, the initial difficulties were not over. . . . The chief obstacle was the necessity of selling sufficient land to comply with the requirements of the statute." The price being finally reduced to twelve shillings an acre, "Mr. Angas succeeded in forming the South Australian Company. . . . The Company took up a sufficient number of land-orders at the reduced rate to fulfil the stipulations of the Act, all other purchasers being placed on the same more advantageous terms, and thus the enterprise was fairly launched. . . . Early in 1836 the dispatch of emigrants began, and on the 29th of July of that year the 'Duke of York,' which was the first vessel to arrive, cast anchor in Nepean Bay. . . . Other vessels arrived in tolerably quick succession at the same rendezvous. . . . When Colonel Light arrived in the month of August with a staff of surveyors, he entered on a careful examination of the country west of the Gulf of St. Vincent. . . . As the result of these observations, which experience has confirmed in every respect, Holdfast Bay was selected for the place of final disembarkation, and there, by December, 1836, most of the arrivals up to that time were congregated." —*Historical Review of South Australia*, by Henry T. Burgess, in *Australasia Illustrated, v.* 2, *pp.*

775-8.—See, also, AUSTRALIA: A. D. 1800-1840.

A. D. 1840-1862.—Discoveries of mineral wealth.—Constitutional organization.—Over-expenditure on public works in the young colony brought on a financial crisis in 1841-2, which was ruinous to many. "To Sir George Grey belongs the credit of rescuing the Colony from the insolvency into which it had been plunged. . . . But personal vigour in the conduct of affairs was not the only force that aided the success of this able Governor. Mineral discoveries, which came in timely to his succour in the shape first of silver, and then of the world-famed Kapunda and Burra copper-mines, situated respectively some 50 and 100 miles from the capital, worked wonders in the resuscitation of a depleted land interest; and, through such resuscitation, rapidly helped on the recovery of the Colony's finances. In 1845, soon after the discovery of the last-named mine, Sir George was appointed Governor of New Zealand. . . . The next Governor was Colonel Robe. . . . Colonel Robe, . . . by attempting to enforce a royalty on minerals, a course contravening the principle of land sales adopted by the first Commissioner in founding the Colony — namely — that 'all minerals went with the land they sold,' aroused the opposition of the Colonists. . . . The tenure of Sir Henry Young, the next Governor, who was appointed in 1848, was fruitful in events of great interest to the material prosperity of the country. The first of these was the great gold discovery of 1851, which so depleted the pastoral pursuits of South Australia as to lead to a momentary crisis. Another event was the opening up of trade with the Riverina district of New South Wales; and a third was the establishment of District Councils. Sir Henry was transferred to Tasmania in 1854, and was succeeded in 1855 by Sir Richard Macdonell. Sir Richard held office for nearly seven years, during which period the Colony acquired its new constitution. . . . The new Legislature set itself to work in right earnest for the reform of the Land Laws, and passed the Real Property Act, introduced by Sir Robert Torrens, which did away with much of the cumbrous procedure with regard to the sale of property, and has ever since been studied, as it deserves to be, by reformers in that direction. The discovery of the Wallaroo Copper mines in 1860 gave another impetus to the development of the country, followed, as it was, by the agricultural settlement of the district. Exploration too was carried on extensively by Mr. Babbage, Major Warburton, and Mr. Stuart, leading to some very advantageous discoveries, in consequence of which the Northern Territory was annexed to South Australia proper."—*Her Majesty's Colonies* (*Colonial and Indian Exhibition*, 1886), *pp.* 189-91.

A. D. 1885-1892.—Movements toward Australian federation. See AUSTRALIA: A. D. 1885-1892.

A. D. 1893-1895.—Labor Settlements.—"The traveller in South Australia who is in any way interested in Labour or Unemployed problems, should pay a visit to the Labour Settlements on the Murray river. . . . These Labour Villages originated in an unemployed agitation in Adelaide and district in the winter of 1893. Labour became slack, partly owing, I believe, to the cessation of government and municipal public works, and a large number of artisans and labourers found themselves without employment in the capital of a country larger than half of Europe, and with a total population less than that of the single city of Manchester. This scarcity of work alongside of countless millions of unlaboured acres seemed to strike the Trades Council of Adelaide, and some members of the Kingston Ministry, as an amazing anomaly, and an effort was forthwith made to bring such land and labour into effective contact. A committee was formed, Mr. Gillen (since dead), then Minister of Lands, was waited upon and, after discussing various suggestions, it was finally agreed that the Village Settlements part of the Act to amend the Crown Lands Acts could be availed of for the purpose of organizing some Labour Villages on the Murray river. Competent members of the Trades Council were dispatched to the Murray to fix upon an eligible site for a pioneer settlement. On the return of these agents with satisfactory reports, the first contingent of the Adelaide unemployed started out for their destination. Under the Act referred to above, which was passed in 1893, 'Any 20 or more persons of the age of 18 years and upwards may, by subscribing their names in the manner prescribed, form an association for the purpose of Village Settlement.' The law being thus so favourable, it greatly facilitated the project which was set on foot. A grant of 16,000 acres was made under the Act to the 100 families who volunteered to join the Association, while a loan of £200 was likewise made, by way of orders upon merchants, to enable the settlers to purchase some necessary tools, horses, outfit, etc., for their needs. Some additional aid was obtained from voluntary sources, but the assistance, all told, fell very much short of what was required to give a community of some 300 souls anything like a fair start in such a tentative enterprise. However, enthusiasm among the volunteers for the Murray made up for scanty equipment, and on the 22nd of February, 1893, a special train carried the one hundred families away from the capital, amidst the goodbyes and good wishes of its citizens. In June, 1895, I found these workers with their wives and families located on the banks of the Murray, whither several other similar volunteer associations had followed them in the meantime. . . . At the time of my visit [to the pioneer settlement, at Lyrup] only some 16 months had elapsed since 300 men, women, and children had been 'dumped,' as it were, on the side of the river, and left to provide for themselves as best they could, with a very scanty equipment of money and materials at their disposal. . . . In a very few weeks all were housed in temporary 'shanties,' and the work of breaking up land, arranging the pumping plant for irrigation work, and getting everything in working order was well on its way. Much pride was taken, and deservedly so, in the fact that only two men had to be expelled for disaffection during the 16 months' life of the settlement. All had worked with a will in the rough experience of the first few weeks, and there was no call for expulsions afterwards. . . . The committee elected by the settlers, on the principle of manhood suffrage, planned out the labour to be done, and relegated the men to the doing of it. Members of the committee were not exempt from a man's share of the toil. All worked eight hours a day at whatever labour was assigned to them. Daily

labour began and ended by the sound of a horn at the stipulated time. Meal hours were of course provided for in the daily arrangement of working time. All food stuffs and provisions are kept in a common store. A written coupon, signed by the secretary, will obtain the quantity of bread, meat, or other requisite allowed to each individual. . . . No money was . . . required under the arrangements of the association. The coupon or ticket of the secretary was all the currency needed. There are no shops, draperies, or groceries allowed except the common store. No drink is kept or sold in the camp. The earnings of the settlers, the value created by their labour, is represented in the extent and improvement of the land reclaimed, the irrigation work effected, the stock raised, and the general development in and around the village. A government Commissioner values these improvements from time to time. Fifty per cent. of the value thus certified is advanced as a loan at five per cent. for ten years by the state to the association formed under the rules laid down by the Minister of Lands. . . . At the termination of 13 years from the organization of a Labour village, and the repayment of the state advances, the members are to be allowed to decide whether the co-operative-communistic plan is to terminate or continue. . . . I discussed the probable decision on this vital point with many members, . . . and I fear that the individualistic sentiment will largely prevail at the end of the probationary period."—M. Davitt, *Life and Progress in Australasia, ch.* 16–17.

A. D. 1670-1696.—The founding of Charleston.—The growth of the Colony.—The expedition of Captain Sayle in 1670 (see NORTH CAROLINA: A. D. 1663–1670) resulted in a settlement, made in 1671, which is historically referred to as that of "Old Charleston." This continued to be for some years the capital of the southern colony; "but, as the commerce of the colony increased, the disadvantages of the position were discovered. It could not be approached by large vessels at low water. In 1680, by a formal command of the proprietors, a second removal took place, the government literally following the people, who had in numbers anticipated the legislative action; and the seat of government was transferred to a neck of land called Oyster Point, admirably conceived for the purposes of commerce, at the confluence of two spacious and deep rivers, the Kiawah and Etiwan, which, in compliment to Lord Shaftesbury, had already been called after him, Ashley and Cooper. Here the foundation was laid of the present city of Charleston. In that year 30 houses were built, though this number could have met the wants of but a small portion of the colony. The heads of families at the Port Royal settlement alone, whose names are preserved to us, are 48 in number; those brought from Clarendon by Yeamans could not have been less numerous; and the additions which they must have had from the mother-country, during the seven or eight years of their stay at the Ashley river settlement, were likely to have been very considerable. Roundheads and cavaliers alike sought refuge in Carolina, which, for a long time, remained a pet province of the proprietors. Liberty of conscience, which the charter professed to guaranty, encouraged emigration. The hopes of avarice, the rigor of creditors, the fear of punishment and persecution, were equal incentives to the settlement of this favored but foreign region. . . . In 1674, when Nova Belgia, now New York, was conquered by the English, a number of the Dutch from that place sought refuge in Carolina. . . . Two vessels filled with foreign, perhaps French, Protestants, were transported to Carolina, at the expense of Charles II., in 1679; and the revocation of the edict of Nantz, a few years afterwards, . . . contributed still more largely to the infant settlement, and provided Carolina with some of the best portions of her growing population. . . . In 1696, a colony of Congregationalists, from Dorchester in Massachusetts, ascended the Ashley river nearly to its head, and there founded a town, to which they gave the name of that which they had left. Dorchester became a town of some importance. . . . It is now deserted; the habitations and inhabitants have alike vanished; but the reverend spire, rising through the forest trees which surround it, still attests (1840) the place of their worship, and where so many of them yet repose. Various other countries and causes contributed to the growth and population of the new settlement."—W. G. Simms, *Hist. of South Carolina, bk.* 2, *ch.* 1.

A. D. 1680.—Spanish attack from Florida.—Indian and Negro Slavery.—"About 1680 a few leading Scotch Presbyterians planned the establishment of a refuge for their persecuted brethren within the bounds of Carolina. The plan shrunk to smaller dimensions than those originally contemplated. Finally Lord Cardross, with a colony of ten Scotch families, settled on the vacant territory of Port Royal. The fate of the settlement foreshadowed the miseries of Darien. It suffered alike from the climate and from the jealousy of the English settlers. . . . For nearly ten years the dread of a Spanish attack had hung over South Carolina. . . . In 1680 the threatened storm broke upon the colony. Three galleys landed an invading force at Edisto, where the Governor and secretary had private houses, plundered them of money, plate, and slaves, and killed the Governor's brother-in-law. They then fell upon the Scotch settlement, which had now shrunk to 25 men, and swept it clean out of existence. The colonists did not sit down tamely under their injuries. They raised a force of 400 men and were on the point of making a retaliatory attack when they were checked by an order

from the Proprietors. . . . The Proprietors may have felt . . . that, although the immediate attack was unprovoked, the colonists were not wholly blameless in the matter. The Spaniards had suffered from the ravages of pirates who were believed to be befriended by the inhabitants of Charlestown. In another way too the settlers had placed a weapon in the hands of their enemies. The Spaniards were but little to be dreaded, unless strengthened by an Indian alliance. . . . But from the first settlement of Carolina the colony was tainted with a vice which imperilled its relations with the Indians. Barbadoes . . . had a large share in the original settlement of Carolina. In that colony negro slavery was already firmly established as the one system of industry. At the time when Yeamans and his followers set sail for the shores of Carolina, Barbadoes had probably two negroes for every one white inhabitant. The soil and climate of the new territory did everything to confirm the practice of slavery, and South Carolina was from the outset what she ever after remained, the peculiar home of that evil usage. To the West India planter every man of dark colour seemed a natural and proper object of traffic. The settler in Carolina soon learnt the same view. In Virginia and Maryland there are but few traces of any attempt to enslave the Indians. In Carolina . . . the Indian was kidnapped and sold, sometimes to work on what had once been his own soil, sometimes to end his days as an exile and bondsman in the West Indies. As late as 1708 the native population furnished a quarter of the whole body of slaves. It would be unfair to attribute all the hostilities between the Indians and the colonists to this one source, but it is clear that it was an important factor. From their very earliest days the settlers were involved in troubles with their savage neighbours."—J. A. Doyle, *The English in America: Virginia, Maryland, and the Carolinas, ch.* 12.—"Of the original thirteen states, South Carolina alone was from its origin essentially a planting state with slave labor. . . . The proprietaries tempted emigrants by the offer of land at an easy quit-rent, and 150 acres were granted for every able man-servant. 'In that they meant negroes as well as Christians.' . . . It became the great object of the emigrant 'to buy negro slaves, without which,' adds Wilson, 'a planter can never do any great matter'; and the negro race was multiplied so rapidly by importations that, in a few years, we are told, the blacks in the low country were to the whites in the proportion of 22 to 12."—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *pt.* 2, *ch.* 8 (*v.* 1).

A. D. 1688-1696.—Beginning of distinctions between the two Carolinas, North and South. See North Carolina: A. D. 1688–1729.

A. D. 1701-1706.—Prosperity of the colony.—Attack on St. Augustine.—French attack on Charleston.—"At the opening of the new century, we must cease to look upon South Carolina as the home of indigent emigrants, struggling for subsistence. While numerous slaves cultivated the extensive plantations, their owners, educated gentlemen, and here and there of noble families in England, had abundant leisure for social intercourse, living as they did in proximity to each other, and in easy access to Charles Town, where the Governor resided, the courts and legislature convened, and the public offices were kept. . . . Hospitality, refinement, and literary culture distinguished the higher class of gentlemen." But party strife at this period raged bitterly, growing mainly out of an attempt to establish the Church of England in the colony. Governor Moore, who had gained power on this issue, sought to strengthen his position by an attack on St. Augustine. "The assembly joined in the scheme. They requested him to go as commander, instead of Colonel Daniel, whom he nominated. They voted £2,000; and thought ten vessels and 350 men, with Indian allies, would be a sufficient force. . . . Moore with about 400 men sets sail, and Daniel with 100 Carolina troops and about 500 Yemassee Indians march by land. But the inhabitants of St. Augustine had heard of their coming, and had sent to Havana for reinforcements. Retreating to their castle, they abandoned their town to Colonel Daniel, who pillaged it before Moore's fleet arrived. Governor Moore and Colonel Daniel united their forces and laid siege to the castle; but they lacked the necessary artillery for its reduction, and were compelled to send to Jamaica for it." Before the artillery arrived, "two Spanish ships appeared off St. Augustine. Moore instantly burned the town and all his own ships and hastened back by land. . . . The expense entailed on the colony was £6,000. When this attack on St. Augustine was planned, it must have been anticipated in the colony that war would be declared against Spain and France." Four years later, the War of the Spanish Succession being then in progress, a French fleet appeared (August, 1706) in the harbor of Charleston and demanded the surrender of the town. Although yellow fever was raging at the time, the governor, Sir Nathaniel Johnson, organized so effective a resistance that the invaders were driven off with considerable loss.—W. J. Rivers, *The Carolinas* (*Narrative and Critical Hist. of Am.*, *v.* 5, *ch.* 5).

A. D. 1740.—War with the Spaniards of Florida. See Georgia: A. D. 1738–1743.

A. D. 1759-1761.—The Cherokee War.—"The Cherokees, who had accompanied Forbes in his expedition against Fort Du Quesne [see Canada: A. D. 1758], returning home along the mountains, had involved themselves in quarrels with the back settlers of Virginia and the Carolinas, in which several, both Indians and white men, had been killed. Some chiefs, who had proceeded to Charleston to arrange this dispute, were received by Governor Littleton in very haughty style, and he presently marched into the Cherokee country at the head of 1,500 men, contributed by Virginia and the Carolinas, demanding the surrender of the murderers of the English. He was soon glad, however, of any apology for retiring. His troops proved very insubordinate; the small-pox broke out among them; and, having accepted 22 Indian hostages as security for peace and the future delivery of the murderers, he broke up his camp, and fell back in haste and confusion. . . . No sooner was Littleton's army gone, than the Cherokees attempted to entrap into their power the commander of [Fort Prince George, at the head of the Savannah], and, apprehensive of some plan for the rescue of the hostages, he gave orders to put them in irons. They resisted; and a soldier having been wounded in the struggle, his infuriated companions fell upon the prisoners and put

them all to death. Indignant at this outrage, the Cherokees beleaguered the fort, and sent out war parties in every direction to attack the frontiers. The Assembly of South Carolina, in great alarm, voted 1,000 men, and offered a premium of £25 for every Indian scalp. North Carolina offered a similar premium, and authorized, in addition, the holding of Indian captives as slaves. An express, asking assistance, was sent to General Amherst, who detached 1,200 men, under Colonel Montgomery, chiefly Scotch Highlanders, lately stationed on the western frontier, with orders to make a dash at the Cherokees, but to return in season for the next campaign against Canada. . . . Joining his forces with the provincial levies, Montgomery entered the Cherokee country, raised the blockade of Fort Prince George, and ravaged the neighboring district. Marching then upon Etchoe, the chief village of the Middle Cherokees, within five miles of that place he encountered [June, 1760] a large body of Indians, strongly posted in a difficult defile, from which they were only driven after a very severe struggle; or, according to other accounts, Montgomery was himself repulsed. At all events, he retired to Charleston, and, in obedience to his orders, prepared to embark for service at the north. When this determination became known, the province was thrown into the utmost consternation. The Assembly declared themselves unable to raise men to protect the frontiers; and a detachment of 400 regulars was presently conceded" to the solicitations of lieutenant governor Bull, to whom the administration of South Carolina had lately been resigned. Before the year closed, the conquest of the French dominions in America east of the Mississippi had been practically finished and the French and Indian War at the north was closed. But, "while the northern colonies exulted in safety, the Cherokee war still kept the frontiers of Carolina in alarm. Left to themselves by the withdrawal of Montgomery, the Upper Cherokees had beleaguered Fort Loudon. After living for some time on horse-flesh, the garrison, under a promise of safe-conduct to the settlements, had been induced to surrender. But this promise was broken; attacked on the way, a part were killed, and the rest detained as prisoners; after which, the Indians directed all their fury against the frontiers. On a new application presently made to Amherst for assistance, the Highland regiment, now commanded by Grant, was ordered back to Carolina. New levies were also made in the province, and Grant presently marched into the Cherokee country [June, 1761] with 2,600 men. In a second battle, near the same spot with the fight of the previous year, the Indians were driven back with loss. . . . The Indians took refuge in the defiles of the mountains, and, subdued and humbled, sued for peace. As the condition on which alone it would be granted, they were required to deliver up four warriors to be shot at the head of the army, or to furnish four green Indian scalps within twenty days. A personal application to Governor Bull, by an old chief long known for his attachment to the English, procured a relinquishment of this brutal demand, and peace was presently made." —R. Hildreth, *Hist. of the U. S., ch.* 27 (*v.* 2).

A. D. 1775.—Rapid progress of Revolution.—Flight of the Royal Governor.—In January, 1775, a provincial convention for South Carolina was called together at Charleston, under the presidency of Charles Pinckney. It appointed delegates to the second Continental Congress, and took measures to enforce the non-importation agreements in which the colony had joined. At a second session, in June, this convention or Provincial Congress of South Carolina "appointed a Committee of Safety, issued $600,000, of paper money, and voted to raise two regiments, of which Gadsden and Moultrie were chosen colonels. Lieutenant-governor Bull was utterly powerless to prevent or interrupt these proceedings. While the Convention was still in session, Lord William Campbell, who had acquired by marriage large possessions in the province, arrived at Charleston with a commission as governor. Received with courtesy, he presently summoned an Assembly; but that body declined to proceed to business, and soon adjourned on its own authority. The Committee of Safety pursued with energy measures for putting the province in a state of defense. A good deal of resistance was made to the Association [for commercial non-intercourse], especially in the back counties. Persuasion failing, force was used. . . . A vessel was fitted out by the Committee of Safety, which seized an English powder ship off St. Augustine and brought her into Charleston. Moultrie was presently sent to take possession of the fort in Charleston harbor. No resistance was made. The small garrison, in expectation of the visit, had already [September] retired on board the ships of war in the harbor. Lord Campbell, the governor, accused of secret negotiations with the Cherokees and the disaffected in the back counties, was soon obliged to seek the same shelter. A regiment of artillery was voted; and measures were taken for fortifying the harbor, from which the British ships were soon expelled."—R. Hildreth, *Hist. of the U. S., ch.* 30–31 (*v.* 3).

A. D. 1776 (February—April).—Allegiance to King George renounced, independence assumed, and a state constitution adopted.—"On the 8th of February 1776, the convention of South Carolina, by Drayton their president, presented their thanks to John Rutledge and Henry Middleton for their services in the American congress, which had made its appeal to the King of kings, established a navy, treasury, and general post-office, exercised control over commerce, and granted to colonies permission to

create civil institutions, independent of the regal authority. The next day arrived Gadsden, the highest officer in the army of the province, and he in like manner received the welcome of public gratitude. . . . When, on the 10th, the report on reforming the provincial government was considered and many hesitated, Gadsden spoke out for the absolute independence of America. The majority had thus far refused to contemplate the end toward which they were irresistibly impelled. . . . But the criminal laws could not be enforced for want of officers; public and private affairs were running into confusion; the imminent danger of invasion was proved by intercepted letters, so that necessity compelled the adoption of some adequate system of rule. While a committee of eleven was preparing the organic law, Gadsden, on the 13th, began to act as senior officer of the army. Companies of militia were called down to Charleston, and the military forces augmented by two regiments of riflemen. In the early part of the year Sullivan's Island was a wilderness, thickly covered with myrtle, live-oak, and palmettos; there, on the 2d of March, William Moultrie was ordered to complete a fort large enough to hold 1,000 men. Within five days after the convention received the act of parliament of the preceding December which authorized the capture of American vessels and property, they gave up the hope of reconciliation; and, on the 26th of March 1776, asserting 'the good of the people to be the origin and end of all government,' and enumerating the unwarrantable acts of the British parliament, the implacability of the king, and the violence of his officers, they established a constitution for South Carolina. . . . On the 27th, John Rutledge was chosen president, Henry Laurens vice-president, and William Henry Drayton chief justice. . . . On the 23d of April the court was opened at Charleston, and the chief justice after an elaborate exposition charged the grand jury in these words: 'The law of the land authorizes me to declare, and it is my duty to declare the law, that George III., king of Great Britain, has abdicated the government, that he has no authority over us, and we owe no obedience to him.'"—G. Bancroft, *Hist. of the U. S.* (*Author's last revision*), *epoch* 3, *ch.* 25 (*v.* 4).

A. D. 1865-1876.—Reconstruction.—"After the close of the war, two distinct and opposing plans were applied for the reconstruction, or restoration to the Union, of the State. The first, known as the Presidential plan [see United

States of Am.: A. D. 1865 (May—July)], was quickly superseded by the second, known as the Congressional plan; but it had worked vast mischief by fostering delusive hopes, the reaction of which was manifest in long enduring bitterness. Under the latter plan, embodied in the Act of Congress of March 2, 1867 [see United States of Am.: A. D. 1867 (March)], a convention was assembled in Charleston, January 14, 1868, 'to frame a Constitution and Civil Government.' The previous registration of voters made in October, 1867, showed a total of 125,328, of whom 46,346 were whites, and 78,982 blacks. . . . On the question of holding a constitutional convention the vote cast in November, 1867, was 71,087; 130 whites and 68,876 blacks voting for it, and 2,801 whites against it. Of the delegates chosen to the convention 34 were whites and 63 blacks. The new Constitution was adopted at an election held on the 14th, 15th, and 16th of April, 1868, all State officers to initiate its operation being elected at the same time. At this election the registration was 133,597; the vote for the Constitution 70,758; against it, 27,288; total vote, 98,046; not voting, 35,551. Against the approval by Congress of this Constitution the Democratic State Central Committee forwarded a protest," which declared: "The Constitution was the work of Northern adventurers, Southern renegades, and ignorant negroes. Not one per cent. of the white population of the State approves it, and not two per cent. of the negroes who voted for its adoption understood what this act of voting implied." "The new State officers took office July 9, 1868. In the first Legislature, which assembled on the same day, the Senate consisted of 33 members, of whom 9 were negroes and but 7 were Democrats. The House of Representatives consisted of 124 members, of whom 48 were white men, 14 only of these being Democrats. The whole Legislature thus consisted of 72 white and 85 colored members. At this date the entire funded debt of South Carolina amounted to $5,407,306.27. At the close of the four years (two terms) of Governor R. K. Scott's administration, December, 1872, the funded debt of the State amounted to $18,515,033.91, including past-due and unpaid interest for three years."—W. Allen, *Governor Chamberlain's Administration in South Carolina, ch.* 1.—"Mr. James S. Pike, late Minister of the United States at the Hague, a Republican and an original abolitionist, who visited the state in 1873, after five years' supremacy by Scott and his successor Moses, and their allies, has published a pungent and instructive account of public affairs during that trying time, under the title of 'The Prostrate State.' The most significant of the striking features of this book is that he undertakes to write a correct history of the state by dividing the principal frauds, already committed or then in process of completion, into eight distinct classes, which he enumerates as follows:—1. Those which relate to the increase of the state debt. 2. The frauds practiced in the purchase of lands for the freedmen. 3. The railroad frauds. 4. The election frauds. 5. The frauds practiced in the redemption of the notes of the Bank of South Carolina. 6. The census fraud. 7. The fraud in furnishing the legislative chamber. 8. General and legislative corruption. . . . Mr. Pike in his 'Prostrate State,' speaking of the state finances in 1873, says: 'But, as the treasury of South Carolina has been so thoroughly gutted by the thieves who have hitherto had possession of the state government, there is nothing left to steal. The note of any negro in the state is worth as much on the market as a South Carolina bond.'" This reign of corruption was checked in 1874 by the election to the governorship of Daniel H. Chamberlain, the regular Republican nominee, who had been Attorney-General during Scott's administration. "Governor Chamberlain, quite in contrast with his predecessors, talked reform after his election as well as before it," and was "able to accomplish some marked and wholesome reforms in public expenditures." In 1876 the Democrats succeeded in overpowering the negro vote and acquired control of the state, electing General Wade Hampton governor.—J. J. Hemphill, *Reconstruction in South Carolina* (*Why the Solid South? ch.* 4).—Generally, for an account of the measures connected with "Reconstruction," see United States of Am.: A. D. 1865 (May—July), to 1868–1870.

SOUTH RIVER, The.—The Delaware and the Hudson were called respectively the South River and the North River by the Dutch, during their occupation of the territory of New Netherland.

SOUTH SEA: The name and its application. See Pacific Ocean.

SOUTH SEA BUBBLE, The.—"The South Sea Company was first formed by Harley [Earl of Oxford, Lord Treasurer of England] in 1711, his object being to improve public credit, and to provide for the floating debts, which at that period amounted to nearly £10,000,000. The Lord Treasurer, therefore, established a fund for that sum. He secured the interest by making permanent the duties on wine, vinegar, tobacco, and several others; he allured the creditors by promising them the monopoly of trade to the Spanish coasts in America; and the project was sanctioned both by Royal Charter and by Act of Parliament. Nor were the merchants slow in swallowing this gilded bait; and the fancied Eldorado which shone before them dazzled even their discerning eyes. . . . This spirit spread throughout the whole nation, and many, who scarcely knew whereabouts America lies, felt nevertheless quite certain of its being strewed with gold and gems. . . . The negotiations of Utrecht, however, in this as in other matters, fell far short of the Ministerial promises and of the public expectation. Instead of a free trade, or any approach to a free trade, with the American colonies, the Court of Madrid granted only, besides the shameful Asiento for negro slaves, the privilege of settling some factories, and sending one annual ship. . . . This shadow of a trade was bestowed by the British Government on the South Sea Company, but it was very soon disturbed. Their first annual ship, the Royal Prince, did not sail till 1717; and next year broke out the war with Spain. . . . Still, however, the South Sea Company continued, from its other resources, a flourishing and wealthy corporation; its funds were high, its influence considerable,

and it was considered on every occasion the rival and competitor of the Bank of England." At the close of 1719 the South Sea Company submitted to the government proposals for buying up the public debt. "The great object was to buy up and diminish the burthen of the irredeemable annuities granted in the two last reigns, for the term mostly of 99 years, and amounting at this time to nearly £800,000 a year." The Bank of England became at once a competitor for the same undertaking. "The two bodies now displayed the utmost eagerness to outbid one another, each seeming almost ready to ruin itself, so that it could but disappoint its rival. They both went on enhancing their terms, until at length the South Sea Company rose to the enormous offer of seven millions and a half. . . . The South Sea Bill finally passed the Commons by a division of 172 against 55. In the Lords, on the 4th of April [1720], the minority was only 17. . . . On the passing of the Bill very many of the annuitants hastened to carry their orders to the South Sea House, before they even received any offer, or knew what terms would be allowed them!—ready to yield a fixed and certain income for even the smallest share in vast but visionary schemes. The offer which was made to them on the 29th of May (eight years and a quarter's purchase) was much less favourable than they had hoped; yet nevertheless, six days afterwards, it is computed that nearly two-thirds of the whole number of annuitants had already agreed. In fact, it seems clear that, during this time, and throughout the summer, the whole nation, with extremely few exceptions, looked upon the South Sea Scheme as promising and prosperous. Its funds rapidly rose from 130 to above 300. . . . As soon as the South Sea Bill had received the Royal Assent in April, the Directors proposed a subscription of one million, which was so eagerly taken that the sum subscribed exceeded two. A second subscription was quickly opened, and no less quickly filled. . . . In August, the stocks, which had been 130 in the winter, rose to 1,000. Such general infatuation would have been happy for the Directors, had they not themselves partaken of it. They opened a third, and even a fourth subscription, larger than the former; they passed a resolution, that from Christmas next their yearly dividend should not be less than fifty per cent.; they assumed an arrogant and overbearing tone. . . . But the public delusion was not confined to the South Sea Scheme; a thousand other mushroom projects sprung up in that teeming soil. . . . Change Alley became a new edition of the Rue Quincampoix [see FRANCE: A. D. 1717–1720]. The crowds were so great within doors, that tables with clerks were set in the street. . . . Some of the Companies hawked about were for the most extravagant projects; we find amongst the number, 'Wrecks to be fished for on the Irish Coast — Insurance of Horses, and other Cattle (two millions) — Insurance of losses by servants — To make Salt Water Fresh — For Building of Hospitals for Bastard Children — For Building of Ships against Pirates — For making of Oil from Sun-flower Seeds — For improving of Malt Liquors — For recovering of Seamen's Wages — For extracting of Silver from Lead — For the transmuting of Quicksilver into a malleable and fine Metal — For making of Iron with Pit-coal — For importing a Number of large Jack Asses from Spain — For trading in Human Hair — For fatting of Hogs — For a Wheel for a Perpetual Motion.' But the most strange of all, perhaps, was 'For an Undertaking which shall in due time be revealed.' Each subscriber was to pay down two guineas, and hereafter to receive a share of one hundred with a disclosure of the object; and so tempting was the offer that 1,000 of these subscriptions were paid the same morning, with which the projector went off in the afternoon. . . . When the sums intended to be raised had grown altogether, it is said, to the enormous amount of £300,000,000, the first check to the public infatuation was given by the same body whence it had first sprung. The South Sea Directors . . . obtained an order from the Lords Justices, and writs of scire facias, against several of the new bubble Companies. These fell, but in falling drew down the whole fabric with them. As soon as distrust was excited, all men became anxious to convert their bonds into money. . . . Early in September, the South Sea stock began to decline: its fall became more rapid from day to day, and in less than a month it had sunk below 300. . . . The decline progressively continued, and the news of the crash in France [of the contemporary Mississippi Scheme of John Law — see FRANCE: A. D. 1717–1720] completed ours. Thousands of families were reduced to beggary. . . . The resentment and rage were universal." —Lord Mahon (Earl Stanhope), *Hist. of Eng.*, 1713–1783, *ch.* 11 (*v.* 2).

SOUTHERN CONFEDERACY, The.—The organization of the so called Confederate States of America, formed among the states which attempted in 1861 to secede from the American Union, is commonly referred to as the Southern Confederacy. For an account of the Constitution of the Confederacy, and the establishing of its government, see UNITED STATES OF AM.: A. D. 1861 (FEBRUARY).

SOUTHERN CROSS, Order of the.—A Brazilian order of knighthood instituted in 1826 by the Emperor, Pedro I.

SPA-FIELDS MEETING AND RIOT, The. See ENGLAND: A. D. 1816–1820.

SPAHIS.—In the Turkish feudal system, organized by Mahomet II. (A. D. 1451–1481), "the general name for the holders of military fiefs was Spahi, a Cavalier, a title which exactly answers to those which we find in the feudal countries of Christian Europe. . . . The Spahi was the feudal vassal of his Sultan and of his Sultan alone. . . . Each Spahi . . . was not only bound to render military service himself in person, but, if the value of his fief exceeded a certain specified amount, he was required to furnish and maintain an armed horseman for every multiple of that sum."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, ch.* 6 *and* 10.—"The Spahis cannot properly be considered as a class of nobles. In the villages they had neither estates nor dwellings of their own; they had no right to jurisdiction or to feudal service. . . . No real rights of property were ever bestowed on them; but, for a specific service a certain revenue was granted them."—L. Ranke, *Hist. of Servia, ch.* 3. —See, also, TIMAR.

SPAIN.

Aboriginal Peoples.—"Spain must either have given birth to an aboriginal people, or was peopled by way of the Pyrenees and by emigrants crossing the narrow strait at the columns of Hercules. The Iberian race actually forms the foundation of the populations of Spain. The Basks, or Basques, now confined to a few mountain valleys, formerly occupied the greater portion of the peninsula, as is proved by its geographical nomenclature. Celtic tribes subsequently crossed the Pyrenees, and established themselves in various parts of the country, mixing in many instances with the Iberians, and forming the so-called Celtiberians. This mixed race is met with principally in the two Castiles, whilst Galicia and the larger portion of Portugal appear to be inhabited by pure Celts. The Iberians had their original seat of civilisation in the south; they thence moved northward along the coast of the Mediterranean, penetrating as far as the Alps and the Apennines. These original elements of the population were joined by colonists from the great commercial peoples of the Mediterranean. Cádiz and Málaga were founded by the Phœnicians, Cartagena by the Carthaginians, Sagonte by immigrants from Zacynthe, Rosas is a Rhodian colony, and the ruins of Ampurias recall the Emporium of the Massilians. But it was the Romans who modified the character of the Iberian and Celtic inhabitants of the peninsula."—É. Reclus, *The Earth and its Inhabitants: Europe, v.* 1, *p.* 372.

B. C. 237-202.—The rule of Hamilcar, Hasdrubal and Hannibal in the south.—Beginning of Roman conquest. See Punic Wars: The Second.

B. C. 218-25.—Roman conquest.—"The nations of Spain were subjugated one after another by the Romans. The contest began with the second Punic war [B. C. 218], and it ended with the defeat of the Cantabri and Astures by Augustus, B. C. 25. From B. C. 205 the Romans had a dominion in Spain. It was divided into two provinces, Hispania Citerior, or Tarraconensis, and Hispania Ulterior, or Baetica. At first extraordinary proconsuls were sent to Spain, but afterwards two praetors were sent, generally with proconsular authority and twelve fasces. During the Macedonian war the two parts of Spain were placed under one governor, but in B. C. 167 the old division was restored, and so it remained to the time of Augustus. The boundary between the two provinces was originally the Iberus (Ebro). . . . The country south of the Ebro was the Carthaginian territory, which came into the possession of the Romans at the end of this [the second Punic] war. The centre, the west, and north-west parts of the Spanish peninsula were still independent. At a later time the boundary of Hispania Citerior extended further south, and it was fixed at last between Urci and Murgis, now Guardias Viejas, in 36° 41′ N. lat."—G. Long, *Decline of the Roman Republic, v.* 1, *ch.* 1.—See, also, Celtiberians; Lusitania; and Numantian War.

B. C. 83-72.—Sertorius.—Quintus Sertorius, who was the ablest and the best of the leaders of the Popular Party, or Italian Party, or Marian Party, as it is variously designated, which contended against Sulla and the senate, in the first Roman civil war, left Italy and withdrew to Spain, or was sent thither (it is uncertain which) in 83 or 82 B. C. before the triumph of Sulla had been decided. His first attempts to make a stand in Spain against the authority of Sulla failed completely, and he had thoughts it is said of seeking a peaceful retreat in the Madeira Islands, vaguely known at that period as the Fortunate Isles, or Isles of the Blest. But after some adventures in Mauritania, Sertorius accepted an invitation from the Lusitanians to become their leader in a revolt against the Romans which they meditated. Putting himself at the head of the Lusitanians, and drawing with them other Iberian tribes, Sertorius organized a power in Spain which held the Romans at bay for nearly ten years and which came near to breaking the peninsula from their dominion. He was joined, too, by a large number of the fugitives from Rome of the proscribed party, who formed a senate in Spain and instituted a government there which aspired to displace, in time, the senate and the republic on the Tiber, which Sulla had reduced to a shadow and a mockery. First Metellus and then Pompey, who were sent against Sertorius (see Rome: B. C. 78–68), suffered repeated defeats at his hands. In the end, Sertorius was only overcome by treachery among his own officers, who conspired against him and assassinated him, B. C. 72. —G. Long, *Decline of the Roman Republic, v.* 2, *ch.* 31–33.

A. D. 409-414. — Invasion of the Vandals, Sueves, and Alans.— From the end of the year 406 to the autumn of 409, the barbaric torrent of Alans, Sueves and Vandals which had swept away the barriers of the Roman empire beyond the Alps, spent its rage on the unhappy provinces of Gaul. On the 13th of October, 409, the Pyrenees were passed and the same flood of tempestuous invasion poured into Spain. "The misfortunes of Spain may be described in the language of its most eloquent historian [Mariana], who has concisely expressed the passionate, and perhaps exaggerated, declamations of contemporary writers. 'The irruption of these nations was followed by the most dreadful calamities; as the barbarians exercised their indiscriminate cruelty on the fortunes of the Romans and the Spaniards, and ravaged with equal fury the cities and the open country. The progress of famine reduced the miserable inhabitants to feed on the flesh of their fellow-creatures; and even the wild beasts, who multiplied without control in the desert, were exasperated by the taste of blood and the impatience of hunger boldly to attack and devour their human prey. Pestilence soon appeared, the inseparable companion of famine; a large proportion of the people was swept away; and the groans of the dying excited only the envy of their surviving friends. At length the barbarians, satiated with carnage

and rapine, and afflicted by the contagious evils which they themselves had introduced, fixed their permanent seats in the depopulated country. The ancient Galicia, whose limits included the kingdom of Old Castile, was divided between the Suevi and the Vandals; the Alani were scattered over the provinces of Carthagena and Lusitania, from the Mediterranean to the Atlantic Ocean; and the fruitful territory of Bætica was allotted to the Silingi, another branch of the Vandalic nation. . . . The lands were again cultivated; and the towns and villages were again occupied by a captive people. The greatest part of the Spaniards was even disposed to prefer this new condition of poverty and barbarism to the severe oppressions of the Roman government; yet there were many who still asserted their native freedom, and who refused, more especially in the mountains of Galicia, to submit to the barbarian yoke.'"—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 31.

A. D. 616.—First expulsion of the Jews. See JEWS: 7TH CENTURY.

A. D. 711-713.—Conquest by the Arab-Moors.—The last century of the Gothic kingdom in Spain was, on the whole, a period of decline. It gained some extension of boundaries, it is true, by the expulsion of Byzantine authority from one small southern corner of the Spanish peninsula, in which it had lingered long; but repeated usurpations had shaken the throne; the ascendancy of church and clergy had weakened the Gothic nobility without strengthening the people; frequent recurrences of political disorder had interfered with a general prosperity and demoralized society in many ways. The condition of Spain, in fact, was such as might plainly invite the flushed armies of Islam, which now stood on the African side of the narrow strait of Gibraltar. That another invitation was needed to bring them in is not probable. The story of the great treason of Count Illan, or Ilyan, or Julian, and of the betrayed daughter, Florinda, to whose wrongs he made a sacrifice of his country, has been woven into the history of the Moorish conquest of Spain by too many looms of romance and poetry to be easily torn away,—and it may have some bottom of fact in its composition; but sober reason requires us to believe that no possible treason in the case could be more than a chance incident of the inevitable catastrophe. The final conquest of North Africa had been completed by the Arab general Musa Ibn Nosseyr,—except that Ceuta, the one stronghold which the Goths held on the African side of the straits, withstood them. They had not only conquered the Berbers or Moors, but had practically absorbed and affiliated them. Spain, as they learned, was distracted by a fresh revolution, which had brought to the throne Roderick—the last Gothic king. The numerous Jews in the country were embittered by persecution and looked to the more tolerant Moslems for their deliverance. Probably their invitation proved more potent than any which Count Ilyan could address to Musa, or to his master at Damascus. But Ilyan commanded at Ceuta, and, after defending the outpost for a time, he gave it up. It seems, too, that when the movement of invasion occurred, in the spring of 711, Count Ilyan was with the invaders. The first expedition to cross the narrow strait from Ceuta to Gibraltar came under the command of the valiant one-eyed chieftain, Tarik Ibn Zeyud Ibn Abdillah. "The landing of Tarik's forces was completed on the 30th of April, 711 (8th Regeb. A. H. 92), and his enthusiastic followers at once named the promontory upon which he landed, Dschebel-Tarik [or Gebel-Tarik], the rock of Tarik. The name has been retained in the modernized form, Gibraltar. It is also spoken of in the Arabian chronicles as Dschebalu-l-Fata, the portal or mountain of victory." Tarik entered Spain with but 7,000 men. He afterwards received reinforcements to the extent of 5,000 from Musa. It was with this small army of 12,000 men that, after a little more than two months, he encountered the far greater host which King Roderick had levied hastily to oppose him. The Gothic king despised the small numbers of his foe and rashly staked everything upon the single field. Somewhere not far from Medina Sidonia,—or nearer to the town of Xeres de la Frontera—on the banks of the Guadalete, the decisive battle began on the 19th day of July, A. D. 711. It lasted obstinately for several days, and success appeared first on the Gothic side; but treason among the Christians and discipline among the Moslems turned the scale. When the battle ended the conquest of Spain was practically achieved. Its Gothic king had disappeared, whether slain or fled was never known, and the organization of resistance disappeared with him. Tarik pursued his success with audacious vigor, even disobeying the commands of his superior, Musa. Dividing his small army into detachments, he pushed them out in all directions to seize the important cities. Xeres, Moron, Carmona, Cordova, Malaga, and Gharnatta—Granada—(the latter so extensively peopled with Jews that it was called "Gharnatta-al-Yahood," or Granada of the Jews) were speedily taken. Toledo, the Gothic capital, surrendered and was occupied on Palm Sunday, 712. The same spring, Musa, burning with envy of his subordinate's unexpected success, crossed to Spain with an army of 18,000 and took up the nearly finished task. He took Seville and laid siege to Merida—the Emerita Augusta of the Romans—a great and splendid city of unusual strength. Merida resisted with more valor than other cities had shown, but surrendered in July. Seville revolted and was punished terribly by the merciless Moslem sword. Before the end of the second year after Tarik's first landing at Gibraltar, the Arab, or Arab-Moorish, invaders had swept the whole southern, central and eastern parts of the peninsula, clear to the Pyrenees, reducing Saragossa after a siege and receiving the surrender of Barcelona, Valencia, and all the important cities. Then, in the summer of 713, Musa and Tarik went away, under orders from the Caliph, to settle their jealous dissensions at Damascus, and to report the facts of the great conquest they made.—H. Coppée, *Hist. of the Conquest of Spain, bk.* 2–3 (*v.* 1).

A. D. 713-910.—The rally of the fugitive Christians.—"The first blow [of the Moslem conquest] had stunned Gothic Spain; and, before she could recover her consciousness, the skilful hands of the Moslemah had bound her, hand and foot. From the first stupor they were not allowed to recover. The very clemency of the Moslems robbed the Christians of argument. If their swords were sharp, their conduct after battle was far better than the inhabitants had any right to expect, far better than that of the Roman or Gothic conquerors had been, when they invaded Spain. Their religion, the defence of which might have been the last rallying-point, was respected under easy conditions; their lives rendered secure and comfortable; they were under tribute, but a tribute no more exacting than Roman taxes or Gothic subsidies. . . . It was the Gothic element, and not the Hispano-Romans, that felt the humiliation most. . . . The Spanish Goths, at first impelled by the simple instinct of self-preservation, had fled in all directions before the fiery march of the Moslemah, after the first fatal battle in the plains of Sidonia. They had taken with them in their flight all the movable property they could carry and the treasures of the churches. Some had passed the Pyrenees to join their kinsmen in Septimania; and others had hidden in the mountain valleys of the great chain-barrier; while a considerable number, variously stated, had collected in the intricate territory of the Asturias and in Galicia, where strength of position made amends for the lack of numbers and organization, and where they could find shelter and time for consultation as to the best manner of making head against the enemy. The country is cut up in all directions by inaccessible, scarped rocks, deep ravines, tangled thickets, and narrow gorges and defiles." This band of refugees in the Asturias — the forlorn hope of Christian Spain — are said to have found a gallant leader in one Pelayo, whose origin and history are so covered with myth that some historians even question his reality. But whether by Pelayo or another prince, the Asturian Spaniards were held together in their mountains and began a struggle of resistance which ended only, eight centuries later, in the recovery of the entire peninsula from the Moors. Their place of retreat was an almost inaccessible cavern — the Cave of Covadonga — in attacking which the Moslems suffered a terrible and memorable repulse (A. D. 717). "In Christian Spain the fame of this single battle will endure as long as time shall last; and La Cueva de Covadonga, the cradle of the monarchy, will be one of the proudest spots on the soil of the Peninsula. . . . This little rising in the Asturias was the indication of a new life, new interests, and a healthier combination. . . . Pelayo was the usher and the representative of this new order, and the Christian kingdom of Oviedo was its first theatre. . . . The battle of Covadonga, in which it had its origin, cleared the whole territory of the Asturias of every Moslem soldier. The fame of its leader, and the glad tidings that a safe retreat had been secured, attracted the numerous Christians who were still hiding in the mountain fastnesses, and infused a new spirit of patriotism throughout the land. . . . Pelayo was now king in reality, as well as in name. . . . With commendable prudence, he contented himself with securing and slowly extending his mountain kingdom by descending cautiously into the plains and valleys. . . . Adjacent territory, abandoned by the Moslems, was occupied and annexed; and thus the new nation was made ready to set forth on its reconquering march."—H. Coppée, *Conquest of Spain by the Arab-Moors, bk.* 5, *ch.* 1-2 (*v.* 1).—"The small province thus preserved by Pelayo [whose death is supposed to have occurred A. D. 737] grew into the germs of a kingdom called at different times that of Gallicia, Oviedo, and Leon. A constant border warfare fluctuated both ways, but on the whole to the advantage of the Christians. Meanwhile to the east other small states were growing up which developed into the kingdom of Navarre and the more important realm of Aragon. Castile and Portugal, the most famous among the Spanish kingdoms, are the most recent in date. Portugal as yet was unheard of, and Castile was known only as a line of castles on the march between the Saracens and the kingdom of Leon."—E. A. Freeman, *Hist. and Conquests of the Saracens, lect.* 5. —"The States of Pelagio [Pelayo] continued, during his reign and that of his son Favila, to be circumscribed to the Asturian mountains; but . . . Alfonso I., the son-in-law of Pelagio, ascended the throne after Favila, and he soon penetrated into Galicia up to the Douro, and to Leon and Old Castile. . . . Canicas, or Cangas, was the capital of the Asturias since the time of Pelagio. Fruela [brother of Alfonso I.] founded Oviedo, to the west, and this State became later on the head of the monarchy." About a century later, in the reign of the vigorous king Alfonso III. [A. D. 866-910], the city of Leon, the ancient Legio of the Romans, was raised from its ruins, and Garcia, the eldest son of Alfonso, established his court there. One of Garcia's brothers held the government of the Asturias, and another one that of Galicia, "if not as separate kingdoms, at least with a certain degree of independence. This equivocal situation of the two princes was, perchance, the reason why the King of Oviedo changed his title to that of Leon, and which appears in the reign of Garcia as the first attempt towards dismembering the Spanish Monarchy. Previous to this, in the reign of King Alfonso III., Navarre, always rebellious, had shaken off the Asturian yoke."—E. McMurdo, *Hist. of Portugal, introd., pt.* 3.

A. D. 756-1031.—The Caliphate of Cordova. See MAHOMETAN CONQUEST AND EMPIRE: A. D. 756-1031.

A. D. 778.—Charlemagne's conquests.—The invasion of Spain by Charlemagne, in 778, was invited by a party among the Saracens, disaffected towards the reigning Caliph, at Cordova, who proposed to place the northern Spanish frontier under the protection of the Christian monarch and acknowledge his suzerainty. He passed the Pyrenees with a great army and advanced with little serious opposition to Saragossa, apparently occupying the country to the Ebro with garrisons and adding it to his dominions as the Spanish March. At Saragossa he encountered resistance and undertook a siege, the results of which are left uncertain. It would seem that he was called away, by threatening news from the northern part of his dominions, and left the

conquest incomplete. The return march of the army, through a pass of the Pyrenees, was made memorable by the perfidious ambuscade and hopeless battle of Roncesvalles, which became immortalized in romance and song. It was in the country of the Gascons or Wascones (Basques) that this tragic event occurred, and the assailants were not Saracens, as the story of the middle ages would have it, but the Gascons themselves, who, in league with their neighbors of Aquitaine, had fought for their independence so obstinately before, against both Charlemagne and his father. They suffered the Franks to pass into Spain without a show of enmity, but laid a trap for the return, in the narrow gorge called the Roscida Vallis — now Roncesvalles. The van of the army, led by the king, went through in safety. The rear-guard, "oppressed with baggage, loitered along the rocky and narrow pathway, and as it entered the solitary gap of Ibayeta, from the lofty precipices on either side an unknown foe rolled suddenly down enormous rocks and trunks of uprooted trees. Instantly many of the troops were crushed to death, and the entire passage was blockaded. . . . The Franks who escaped the horrible slaughter were at once assailed with forks and pikes; their heavy armor, which had served them so well in other fights, only encumbered them amid the bushes and brambles of the ravine; and yet they fought with obstinate and ferocious energy. Cheered on by the prowess of Eghihard, the royal seneschal, of Anselm, Count of the Palace, of Roland, the warden of the Marches of Brittany, and of many other renowned chiefs, they did not desist till the last man had fallen, covered with wounds and blood. . . . How many perished in this fatal surprise was never told; but the event smote with profound effect upon the imagination of Europe; it was kept alive in a thousand shapes by tales and superstitions; heroic songs and stories carried the remembrance of it from generation to generation; Roland and his companions, the Paladins of Karl, untimely slain, became, in the Middle Ages, the types of chivalric valor and Christian heroism; and, seven centuries after their only appearance in history, the genius of Pulci, Boiardo, and Ariosto still preserved in immortal verse the traditions of their glory. . . . Roland is but once mentioned in authentic history, but the romance and songs, which make him a nephew of Karl, compensate his memory for this neglect."—P. Godwin, *Hist. of France: Ancient Gaul, ch.* 16, *with foot-note.*

A. D. 778-885 (?).—Rise of the kingdom of Navarre. See Navarre: Origin of the Kingdom.

A. D. 1026-1230.—The rise of the kingdom of Castile.—"Ancient Cantabria, which the writers of the 8th century usually termed Bardulia, and which, at this period [the 8th century] stretched from the Biscayan sea to the Duero, towards the close of the same century began to be called Castella — doubtless from the numerous forts erected for the defence of the country by Alfonso I. [the third king of Oviedo, or Leon]. As the boundaries were gradually removed towards the south, by the victories of the Christians, the same denomination was applied to the new as well as to the former conquests, and the whole continued subject to the same governor, who had subordinate governors dependent on him. Of the first governors or counts, from the period of its conquest by that prince in 760, to the reign of Ordoño I. (a full century), not even the names are mentioned in the old chroniclers; the first we meet with is that of Count Rodrigo, who is known to have possessed the dignity at least six years, — viz. from 860 to 866." The last count of Castile, Garcia Sanchez, who was the eighth of the line from Rodrigo, perished in his youth by assassination (A. D. 1026), just as he was at the point of receiving the title of king from the sovereign of Leon, together with the hand of the latter's daughter. Castile was then seized by Sancho el Mayor, king of Navarre, in right of his queen, who was the elder sister of Garcia. He assumed it to be a kingdom and associated the crown with his own. On his death, in 1035, he bequeathed this new kingdom of Castile to one of his sons, Fernando, while leaving Navarre to another, and Aragon, then a lordship, to a third. Fernando of Castile, being involved soon afterwards in war with the young king of Leon, won the kingdom of the latter in a single battle, where the last of the older royal dynasty of Spain fell fighting like a valiant knight. The two kingdoms of Castile and Leon were united under this prosperous king (see, also, Portugal: Early history) until his death, A. D. 1065, when Castile passed to Sancho, the eldest of his sons, and Leon to Alfonso, the second. But Sancho soon ousted Alfonso, and Alfonso, biding his time, acquired both crowns in 1072, when Sancho was assassinated. It was this Alfonso who recovered the ancient capital city, Toledo, from the Moslems, and it was in his reign that the famous Cid Campeador, Rodrigo de Bivar, performed his fabulous exploits. The two kingdoms were kept in union until 1157, when they fell apart again and continued asunder until 1230. At that time a lasting union of Castile and Leon took place, under Fernando III., whom the church of Rome has canonized.—S. A. Dunham, *Hist. of Spain and Portugal, bk.* 3, *sect.* 2, *ch.* 1.

A. D. 1031-1086.—Petty and short-lived Moorish kingdoms.—"The decline and dissolution of the Mohammedan monarchy, or western caliphate, afforded the ambitious local governors throughout the Peninsula the opportunity for which they had long sighed — that of openly asserting their independence of Cordova, and of assuming the title of kings. The wali of Seville, Mohammed ben Ismail ben Abid, . . . appears to have been the first to assume the powers of royalty; . . . he declared war against the self-elected king of Carmona, Mohammed ben Abdalla, on whose cities, Carmona and Ecija, he had cast a covetous eye. The brother of Yahia, Edris ben Ali, the son of Hamud, governed Malaga with equal independence. Algeziras had also its sovereigns. Elvira and Granada obeyed Habus ben Maksan: Valencia had for its king Abdelasis Abul Hassan, Almeria had Zohair, and Denia had Mugehid; but these two petty states were soon absorbed in the rising sphere of Valencia. Huesca and Saragossa were also subject to rulers, who though slow to assume the title of kings were not the less independent, since their

sway extended over most of Aragon. The sovereign of Badajos, Abdalla Muslema ben Alaftas, was the acknowledged head of all the confederated governors of Algarve and Lusitania; and Toledo was subject to the powerful Ismail ben Dyluun, who, like the king of Seville, secretly aspired to the government of all Mohammedan Spain."—S. A. Dunham, *Hist. of Spain and Portugal, bk.* 3, *sect.* 1, *ch.* 1 (*v.* 2).—"These petty kings were sometimes fighting against each other, and sometimes joining hands to oppose the down-coming of Christians, until they were startled by a new incursion from Africa . . . which, in consolidating Islam, threatened destruction to the existing kingdoms by the absorption of every one of them in this African vortex. I refer to the coming of the Almoravides."—H. Coppée, *Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 2 (*v.* 2).

A. D. 1034-1090.—The Exploits of the Cid.—"Rodrigo Diez de Bivar, who came of an old Castilian stock, was born in 1026—others say 1040. . . . His name of 'El Cid,' the Lord, or 'Mio Cid,' which is exactly 'Monseigneur,' was given him first by the Moors, his own soldiers and subjects, and universally adopted by all Spaniards from that day to this. Such a title is significant, not only of the relations between the two peoples, but of Rodrigo's position as at once a Moorish and a Spanish chief. 'El Campeador,' the name by which Rodrigo is also distinguished, means in Spanish something more special than 'champion.' A 'campeador' was a man who had fought and beaten the select fighting-man of the opposite side, in the presence of the two armies. . . . Rodrigo earned the name, not at the expense of any Moor but of a Christian, having when quite a youth slain a Navarrese champion in a war between Castile and Navarre. The first mention of his name occurs in a deed of Fernando I., of the year 1064."—H. E. Watts, *Christian Recovery of Spain, ch.* 3.—"Sancho III. of Navarre, who died in 1034, had united almost all the Christian states of the Peninsula under one dominion, having married the heiress of the county of Castile, and obtained the hand of the sister of Bermudez III., the last king of Leon, for his second son, Ferdinand. The Asturias, Navarre, and Aragon were all subject to him, and he was the first who assumed the title of King of Castile. To him the sovereign houses of Spain have looked up as their common ancestor, for the male line of the Gothic Kings became extinct in Bermudez III. . . . D. Sancho divided his states amongst his children: D. Garcia became King of Navarre, D. Ferdinand, King of Castile, and D. Ramirez, King of Aragon. The Cid, who was a subject of D. Ferdinand, entered upon his military career under that monarch's banners, where he displayed that marvellous strength and prodigious valour, that constancy and coolness, which raised him above all the other warriors of Europe. Many of the victories of Ferdinand and the Cid were obtained over the Moors. . . . It is . . . in the reign of Ferdinand that the first romantic adventures of the Cid are said to have occurred; his attachment to Ximena, the only daughter of Count Gormaz; his duel with the Count, who had mortally injured his father; and lastly his marriage with the daughter of the man who had perished by his sword. The authenticity of these poetical achievements rests entirely on the romances [of the Chronicle of the Cid]; but though this brilliant story is not to be found in any historical document, yet the universal tradition of a nation seems to stamp it with sufficient credit. The Cid was in habits of the strictest friendship with the eldest son of Ferdinand, D. Sancho, surnamed the Strong, and the two warriors always combated side by side. During the lifetime of the father, the Cid, in 1049, had rendered tributary the Musulman Emir of Saragossa. He defended that Moorish prince against the Aragonese, in 1063; and when Sancho succeeded to the throne in 1065, he was placed, by the young King, at the head of all his armies. . . . D. Sancho, who merited the friendship of a hero, and who always remained faithful to him, was, notwithstanding, no less ambitious and unjust than his father, whose example he followed in endeavouring to deprive his brothers of their share of the paternal inheritance. To the valour of the Cid he owed his victories over D. Garcia, King of Galicia, and D. Alfonso, King of Leon, whose states he invaded. The latter prince took refuge amongst the Moors, with the King of Toledo, who afforded him a generous asylum. D. Sancho, after having also stripped his sisters of their inheritance, was slain in 1072, before Zamora, where the last of his sisters, D. Urraca, had fortified herself. Alfonso VI., recalled from the Moors to ascend the vacant throne, after having taken an oath, administered by the hands of the Cid, that he had been in no degree accessory to his brother's death, endeavoured to attach that celebrated leader to his interests by promising him in marriage his own niece Ximena, whose mother was sister-in-law to Ferdinand the Great and Bermudez III., the last King of Leon. This marriage, of which historical evidence remains, was celebrated on the 19th of July, 1074. The Cid was at that time nearly fifty years of age, and had survived his first wife Ximena, the daughter of Count Gormaz, so celebrated in the Spanish and French tragedies. Being soon afterwards despatched on an embassy to the Moorish princes of Seville and Cordova, the Cid assisted them in gaining a great victory over the King of Grenada; but scarcely had the heat of the battle passed away when he restored all the prisoners whom he had taken, with arms in their hands, to liberty. By these constant acts of generosity he won the hearts of his enemies as well as of his friends. He was admired and respected both by Moors and Christians. He had soon afterwards occasion to claim the protection of the former; for Alfonso VI., instigated by those who were envious of the hero's success, banished him from Castile. The Cid upon this occasion took refuge with his friend Ahmed el Muktadir, King of Saragossa, by whom he was treated with boundless confidence and respect. He was appointed by him to the post of governor of his son, and was in fact intrusted with the whole administration of the kingdom of Saragossa, during the reign of Joseph El Muktamam, from 1081 to 1085, within which period he gained many brilliant victories over the Christians of Aragon, Navarre, and Barcelona. Always generous to the vanquished, he again gave liberty to the prisoners. Alfonso VI. now began to regret that he had deprived himself of the services of the most valiant of his warriors; and being attacked by the redoubtable Joseph, the son of Teschfin, the Morabite, who had invaded Spain

with a new army of Moors from Africa, and having sustained a defeat at Zalaka, on the 23d of October, 1087, he recalled the Cid to his assistance. That hero immediately repaired to his standard with 7,000 soldiers, levied at his own charge; and for two years continued to combat for his ungrateful sovereign; but at length, either his generosity in dismissing his captives, or his disobedience to the orders of a prince far inferior to himself in the knowledge of the art of war, drew upon him a second disgrace about the year 1090. He was again banished; his wife and son were imprisoned, and his goods were confiscated. It is at this period that the poem . . . commences."—J. C. L. S. de Sismondi, *Literature of the South of Europe, ch.* 23 (*v.* 2).

Also in: *Chronicle of the Cid, from the Spanish, by R. Southey.*—G. Ticknor, *Hist. of Spanish Lit., period* 1, *ch.* 2 (*v.* 1).

A. D. 1035-1258.—The Rise of the Kingdom of Aragon.—The province of Aragon, with Navarre to the west of it and Catalonia to the east, was included in the Spanish March of Charlemagne. Navarre took the lead among these provinces in acquiring independence, and Aragon became for a time a lordship dependent on the Navarrese monarchy. "The Navarre of Sancho the Great [the same who gathered Castile among his possessions, making it a kingdom, and who reigned from 970 to 1035] stretched some way beyond the Ebro; to the west it took in the ocean lands of Biscay and Guipuzcoa, with the original Castile; to the east it took in Aragon, Ripacurcia and Sobrarbe. . . . At the death of Sancho the Great [A. D. 1035] his momentary dominion broke up. . . . Out of the break-up of the dominion of Sancho came the separate kingdom of Navarre, and the new kingdoms of Castile, Aragon, and Sobrarbe. Of these the two last were presently united, thus beginning the advance of Aragon. . . . The power of Aragon grew, partly by conquests from the Mussulmans, partly by union with the French fiefs to the east. The first union between the crown of Aragon and the county of Barcelona [by marriage, 1131] led to the great growth of the power of Aragon on both sides of the Pyrenees and even beyond the Rhone. This power was broken by the overthrow of King Pedro at Muret—[Pedro II. of Aragon, who allied himself with the Albigenses—see Albigenses: A. D. 1210–1213—and was defeated and slain by Simon de Montfort, at Muret, near Toulouse, September 12, 1213]. But by the final arrangement which freed Barcelona, Roussillon, and Cerdagne, from all homage to France [A. D. 1258], all trace of foreign superiority passed away from Christian Spain. The independent kingdom of Aragon stretched on both sides of the Pyrenees, a faint reminder of the days of the West-Gothic kings."—E. A. Freeman, *Hist. Geog. of Europe, ch.* 12, *sect.* 1.

Also in: S. A. Dunham, *Hist. of Spain and Portugal, bk.* 3, *sect.* 2, *ch.* 4.—See, also, Provence: A. D. 1179–1207.

A. D. 1140.—Separation of Portugal from Castile.—Its erection into an independent kingdom. See Portugal: A. D. 1095–1325.

A. D. 1146-1232.—Invasion and dominion of the Almohades and the decisive battle of Tolosa.—The invasion of Spain by the Moorish Almohades (see Almohades), and their struggle for dominion with the Almoravides, produced, at the outset, great alarm in Christendom, but was productive in the end of many opportunities for the advancement of the Christian cause. In the year 1212 Pope Innocent III. was moved by an appeal from Alfonso VIII. of Castile to call on all Christian people to give aid to their brethren in Spain, proclaiming a plenary indulgence to those who would take up arms in the holy cause. Thousands joined the crusade thus preached, and flocked to the Castilian standards at Toledo. The chief of the Almohades retorted on his side by proclaiming the Algihed or Holy War, which summoned every Moslem in his dominions to the field. Thus the utmost frenzy of zeal was animated on both sides, and the shock of conflict could hardly fail to be decisive, under the circumstances. Substantially it proved to be so, and the fate of Mahometanism in Spain is thought to have been sealed on Las Navas de Tolosa—the Plains of Tolosa—where the two great hosts came to their encounter in July, 1212. The rout of the Moors was complete; "the pursuit lasted till nightfall, and was only impeded by the Moslem corpses."—H. Coppée, *Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 4 (*v.* 2).

12-15th Centuries.—The old monarchical constitution.—The Castilian and Aragonese Cortes. See Cortes, The early Spanish.

A. D. 12-16th Centuries.—Commercial importance and municipal freedom of Barcelona. See Barcelona: 12–16th centuries.

A. D. 1212-1238.—Progress of the arms of Castile, Leon, and Aragon.—Succession of the count of Champagne to the throne of Navarre.—Permanent union of the crowns of Leon and Castile.—The founding of the Moorish kingdom of Granada.—Castilian conquest of Cordova.—"Alfonso of Castile died two years after his great victory [of 'las navas de Tolosa']. He left his crown to his only son Henry, a boy of eleven, and the regency to his daughter Berenguela, queen of Leon, who was separated, upon the almost always available plea of too near consanguinity, from her husband Alfonso. Berenguela administered her delegated power ably, but held it only three years: at the end of that time the young king was accidentally killed by a tile falling upon his head. Berenguela was her brother's natural heiress; but idolizing her only son, Ferdinand, whom she had nursed and educated herself, she immediately renounced her claim to the throne in his favour, . . . and caused Ferdinand III. to be acknowledged king: Alfonso IX., however, long continued to disturb his wife and son's government. The king of Aragon [Pedro II.] was recalled immediately after the great battle to the concerns of his French dominions," where he joined his kinsman, the count of Toulouse, as stated above, in resisting the Albigensian crusade, and fell (1213) at Muret. "Whilst Pedro's uncles and brothers were struggling for his succession, the queen-dowager obtained from the Pope an order to Simon de Montfort, the leader of the crusade, to deliver her son [whom the father had given up as hostage before he resolved to commit himself to war with the crusaders] into her hands. Having thus got possession of the rightful heir, she procured the assembling of the Cortes of Aragon, to whom she presented the young king, when nobles, clergy, and town deputies voluntarily swore

allegiance to him. This was the first time such an oath was taken in Aragon, the most limited of monarchies. It had been usual for the Aragonese kings at their coronation to swear observance of the laws, but not to receive in return an oath of fidelity from the people. Henceforward this corresponding oath of fidelity was regularly taken under the following form, celebrated for its singularly bold liberty. 'We, who are as good as you, make you our king to preserve our rights; if not, not.' The Catalans followed the example of their Aragonese brethren in proclaiming James king; but many years elapsed ere he could sufficiently allay the disorders excited by his ambitious uncles to prosecute the war against the Moors. At length the several kings of Castile, Leon, Aragon, and Portugal, were ready, unconnectedly, to invade Mussulman Spain, where Almohade princes and Mohammed aben Hud, a descendant of the kings of Saragossa, were contending for the sovereignty, and many 'walis' were struggling for independent royalty; all far more intent upon gratifying their mutual jealousies and enmities than upon resisting the common foe, with whom, on the contrary, all were willing to enter into alliance in furtherance of their separate views. Under these circumstances, James of Aragon made himself master of the greater part of Valencia, and of the island of Majorca [and subsequently of Minorca]; Ferdinand of Castile extended his conquests in Andalusia; Alfonso of Leon his in Estremadura; and Sancho II. of Portugal, who had lately succeeded to his father Alfonso II., acquired the city of Elvas. . . . Sancho of Navarre took no part in these wars. After . . . the battle of 'las navas de Tolosa' he quitted the career of arms, devoting himself wholly to the internal administration of his kingdom. He had no children, neither had his eldest sister, the queen of England [Berengaria, wife of Richard Cœur de Lion], any. Thence his youngest sister's son, Thibalt, count of Champagne, became his natural heir. But Sancho, judging that the distance between Navarre and Champagne unfitted the two states for being governed by one prince, adopted his kinsman, James of Aragon, and to him, as heir, the Navarrese clergy and nobility, and the count of Champagne himself, prospectively swore fealty. Upon Sancho's death, in 1234, however, the Navarrese, preferring independence under the lineal heir to an union with Aragon, entreated king James to release them from their oaths. He was then engaged in the conquest of Valencia; and unwilling, it may be hoped, to turn his arms from Mahometan enemies against his fellow-Christians, he complied with the request, and Thibalt was proclaimed king of Navarre. Thibalt neglected the wars carried on by his Spanish brother kings against the Mahometans, to accept the command of a crusade for the recovery of Jerusalem. The expedition was unsuccessful, but the reputation of the leader did not suffer. Upon his return, Thibalt followed the example of his uncle in studying only to promote the internal welfare of the country. He introduced the cultivation of the grape and the manufacture of wine into Navarre, with other agricultural improvements. Thibalt is more known as one of the most celebrated troubadours or poets of his day. Prior to Thibalt's accession, the conquering progress of Leon and Castile had been temporarily interrupted. Alfonso of Leon died in 1230, and by his will divided Leon and Galicia between two daughters of his first marriage, wholly overlooking his son Ferdinand. . . . By negociation, however, and the influence which the acknowledged wisdom and virtues of queen Berenguela appear to have given her over every one but her husband, the superior claims of Ferdinand were admitted. The two infantas were amply endowed, and the crowns of Leon and Castile were thenceforward permanently united. With power thus augmented, Ferdinand III. renewed his invasion of the Mussulman states, about the time that Yahie, the last of the Almohade candidates for sovereignty, died, bequeathing his pretensions to Mohammed abu Abdallah aben Alhamar, an enterprising leader, who, in the general confusion, had established himself as king of Jaen, and was the sworn enemy of Yahie's chief rival, Abdallah aben Hud. Ferdinand invaded the dominions of Abdallah, and Mohammed took that opportunity of materially enlarging his own. After a few years of general war, Abdallah aben Hud was assassinated by the partisans of the king of Jaen, and his brother Aly, who succeeded to his pretensions, met a similar fate. Mohammed ben Alhamar was immediately received into the city of Granada, which he made his capital; and thus, in 1238, founded the kingdom of Granada, the last bright relic of Moorish domination in Spain, and the favourite scene of Spanish romance. Had Mohammed succeeded to the Almohade sovereignty in Spain, and his authority been acknowledged by all his Mussulman countrymen, so able and active a monarch might probably have offered effective resistance to Christian conquest. But his dominions consisted only of what is still called the kingdom of Granada, and a small part of Andalusia. The remaining Mahometan portions of Andalusia, Valencia, and Estremadura, as well as Murcia and Algarve, swarmed with independent 'walis' or kings. James of Aragon completed the subjugation of Valencia the following year. Cordova, so long the Moorish capital, was taken by Ferdinand [1235], with other places of inferior note. The Murcian princes avoided invasion by freely offering to become Castilian vassals; and now the conquering troops of Castile and Leon poured into the territories of Mohammed. The king of Granada, unsupported by his natural allies, found himself unequal to the contest, and submitted to become, like his Murcian neighbours, the vassal of Ferdinand. In that capacity he was compelled to assist his Christian liege lord in conquering Mussulman Seville."—M. M. Busk, *Hist. of Spain and Portugal, ch. 7.*

Also in: *Chronicle of James I., King of Aragon, surnamed the Conqueror; tr. by J. Forster.*

A. D. 1238-1273.—The Moorish kingdom of Granada.—The building of the Alhambra.—"A new era had begun in the fortunes of the Moors. Reft of their two magnificent capitals at Cordova and Seville, they had gathered into the extreme south, under the able and beneficent rule of Aben-al-Hamar, who, though a tributary to Castille, termed himself Sultan and Emir of the Faithful, and is usually called King of Granada. Karnattah, as the Arabs had named it, meant the Cream of the West. The Spaniards in later times, deceived by the likeness of the word to Granada, a pomegranate, fancied it to have been thence named, and took the fruit as its emblem.

The kingdom was a mere fragment, and did not even reach to the Straits; for Algezira, the green island, and its great fortresses, belonged to the Africans; and it had in it elements of no small danger, containing as it did the remnants of no less than thirty-two Arab and Moorish tribes, many of them at deadly feud with one another, and divided by their never-ending national enmities. The two great tribes of Abencerrages, or sons of Zeragh, and the Zegris, or refugees from Aragon, were destined to become the most famous of these. The king himself, Mohammed-Abou-Said, was of the old Arabian tribe of Al Hamar, by whose name he is usually called. He was of the best old Arabic type — prudent, just, moderate, temperate, and active, and so upright as to be worthy to belong to this age of great kings, and his plans for his little kingdom were favoured by the peace in which his Christian neighbours left him: while Alfonso X. of Castille was vainly endeavouring to become, not Emperor of Spain alone, but Roman Emperor. The Almohides of Algarve obeyed neither Alfonso nor Al Hamar, and they united to subdue them. Ten cities were surrendered by the governor on condition that he should enjoy the estates of the King's Garden at Seville, and the tenth of the oil of an oliveyard. There was still a margin of petty walis who preferred a brief independence to a secure tenure of existence as tributaries, and these one by one fell a prey to the Castilians, the inhabitants of their cities being expelled, and adding to the Granadine population. Al Hamar received them kindly, but made them work vigorously for their maintenance. Every nook of soil was in full cultivation; the mountain-sides terraced with vineyards; new modes of irrigation invented; the breeds of horses and cattle carefully attended to; rewards instituted for the best farmers, shepherds, and artisans. The manufactures of silk and wool was actively carried on, also leather-work and sword-cutlery. Hospitals and homes for the sick and infirm were everywhere; and in the schools of Granada the remnants of the scholarship of Cordova and Seville were collected. Granada itself stood in the midst of the Vega, around two hills, each crowned by a fortress: Alhayzin, so called by the fugitives from Baeza; and the Al Hámra [or Alhambra], or Red Fortress. The wall was extended so as to take in the constantly increasing population, and the king began to render the Alhâmra one of the strongest and most beautiful places in existence. Though begun by Al Hamar it was not completed for several generations, each adding to the unrivalled beauty of the interior [an account of the architecture, the outside has to be kept] being a strong fortification of heavy red walls. . . . [illegible] Al-Hamar died 1273, and his son Mohammed II. [illegible] — S. Lane-Poole, *The Story of the Moors in Spain*. [illegible] — S. Lane-Poole, *The Story of the Alhambra*. [illegible] — J. D. Murphy, *Arabian Antiquities of Spain*.

A. D. 1248-1350.—The conquest of Seville. —The reigns of St. Ferdinand, Alfonso the Learned, and their three successors in Castile. —Seville, which had become the second city of Moslem Spain, its schools and universities rivalling those of Cordova, shared the fate of the latter and surrendered to the Christians on the 22d of December, 1248. "This was the achievement of King Ferdinand III., under whom the crowns of Castile and Leon had become united. His territory extended from the Bay of Biscay to the Guadalquiver, and from the borders of Portugal as far as Arragon and Valencia. His glory was great in the estimation of his countrymen for his conquests over the Moors, and four centuries afterwards he was canonized by the Pope, and is now known as Saint Ferdinand. . . . Ferdinand lived at the same time with another king who was also canonized — Louis IX. of France, who became Saint Louis. . . . The two kings, in fact, were cousins, and the grandmother of both of them was Eleanor, daughter of Henry II. of England. . . . The son of Saint Ferdinand was Alfonso X., called 'El Sabio,' the learned, and not, as it is sometimes translated, 'the wise.' He certainly was not very wise, for he did an immense number of foolish things; but he was such a strange man that it would be interesting to know more about him than it is easy to do. It was a period when not only commerce and industry but literature and art were taking a new start in Europe — the time of Roger Bacon and Dante. Alfonso loved his books, and dabbled in science, and was really one of the learned men of his time. . . . His mind was very naturally disturbed by a glimpse he had of being emperor of Germany [or, to speak accurately, of the Holy Roman Empire]. . . . The dignity was elective," and Alfonso became the candidate of one party among the German electors; but he did not obtain the dignity (see GERMANY: A. D. 1250–1272). "Ferdinand de la Cerda, the son and heir of Alfonso, died during the lifetime of his father, and a difficulty arose about the succession which extended over a long time. A Cortes was assembled to decide the question, and it was agreed that Sancho, brother to Ferdinand de la Cerda, should be heir to the crown, to the exclusion of the children of Ferdinand, grandchildren of Alfonso. This decision displeased the king of France," who was the uncle of the children set aside. Alfonso "declared in favor of his son Sancho, and came near having a war with France in consequence." Yet Sancho, soon afterwards, was persuaded to rebel against his father, and the latter was reduced to sore straits, having no allies among his neighbors except the king of Morocco. "At last the goaded king assembled his few remaining adherents in Seville, and, in a solemn act, not only disinherited his rebel son Sancho, but called down maledictions on his head. In the same act he instituted his grandsons, the infantes de la Cerda, as his heirs, and after them, in default of issue, the kings of France." But Sancho fell ill after this, and the fondness of his old father revived with such intensity that he sickened of anxiety and grief. "Sancho recovered and was soon as well as ever; but the king grew worse, and soon died [1284], full of grief and affection for his son. He had not, however, revoked his will. Nobody minded the will, and Sancho was proclaimed king. He reigned, and his son and grandson reigned after him." The son was Ferdinand IV., who came to the throne in 1295; the grandson was Alfonso XI., who followed him in 1312. The latter was succeeded in 1350 by his son Pedro, or Peter, surnamed the Cruel, and quite eminent under that sinister designation, especially through the unfortunate connection of the English Black Prince with his later evil fortunes.—E. E. and S. Hale. *The Story of Spain, ch.* 18.

A. D. 1273-1460.—The slow crumbling of the Moorish kingdom of Granada. — The founder of the kingdom of Granada, Aben-Al-Hamar, or Ibnu-l-ahmar, died in 1273. He was "succeeded by his son, Abú Abdillah, known as Mohammed II. Obeying his father's injunctions, he called upon Yahúb, the Sultan of the Beni Merines at Fez, to come to his aid, and captured Algeçiras, to serve as a receptacle and magazine for these African allies. He also presented Tarifa to Yahúb. The two allied forces then went out to meet Nuño de Lara with the Christian frontier troops, and routed him. But Mohammed was soon prevailed upon by his fears to renew the Christian alliance; and the Christian troops, thus freed from one enemy, soon wrested Algeçiras, Tarifa [1291], Ronda, and other towns, from the Beni Merines, who were, all but a small remnant, driven back into Africa. . . . Mohammed II. died in 1302, and was succeeded by a greater king,—Mohammed III., another Abú Abdillah, . . . dethroned by a revolt of his brother, Nasr; but when, in 1312, Nasr in turn was forced to abdicate, he was succeeded by Isma'il Abú-l-Waled, after whom came Mohammed IV., in 1315. Meantime the Christian monarchs were always pressing the Moorish frontier. In 1309, Ferdinand IV. of Castile succeeded in taking Gibraltar, while the troops of Aragon besieged Almeria, and thus the circle was ever narrowing, but not without bloody dispute. When Don Pedro, Infante of Castile, made his great effort against Granada in 1319, he was wofully defeated in the battle of Elvira, and his rich camp despoiled by the Moors. Mohammed IV. succeeded in retaking Gibraltar from the Christians [or, rather, according to Condé, it was taken in 1331 by Mohammed's ally, the king of Fez, to whom Mohammed was forced to cede it]. . . . He was assassinated by his African allies, and succeeded by his brother Yúsuf in 1333. Prompted purely by self-interest, Abu-l-has, another leader, with 60,000 men, beside the contingent from Granada, encountered the Christians near Tarifa in the year 1340, and was defeated with immense loss [in the battle of the Guadacelito or the Salado]. Yúsuf was assassinated by a madman in 1354, and was succeeded by Mohammed V. . . . Driven from his throne by a revolt of his half-brother Isma'il, he first fled for his life to Guadix, and then to Africa, in the year 1359. And all these intestine quarrels were playing into the Christians' hands. Isma'il, the usurper, held the nominal power less than a year, when he was dethroned and put to death. His successor, Mohammed VI., surrounded by difficulties, came to the strange determination to place himself and his kingdom under the protection of that King Pedro of Castile whom history has named 'el cruel,' but whom his adherents called 'el justiciero,' the doer of justice. The Castilian king vindicated his claim to the historic title by putting Mohammed to death, and seizing 'the countless treasures which he and the chiefs who composed his suite brought with them.' To the throne, thus once more vacant by assassination, Mohammed V. returned, and ruled a second time, from 1362 to 1391. . . . Then came the reigns of Yúsuf II. and Mohammed VII., uneventful, except that, in the words of the Arabian chronicler, 'the Mohammedan empire still went on decaying, until it became an easy prey to the infidels, who surrounded it on every side, like a pack of hungry wolves.' Many portents of ruin were displayed, and the public mind was already contemplating the entire success of the Christians." A century of confused struggles ensued, in the course of which Gibraltar was several times besieged by the Christians, and was finally taken by the Duke of Medina Sidonia in 1460. Other strongholds of the Moors fell, one by one, and they "were being more and more restricted to their little kingdom of Granada, and the Christians were strengthening to dislodge and expel them."—H. Coppée, *Hist. of the Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 5 (*v.* 2).

(Aragon): A. D. 1282-1300.—Acquisition of Sicily by King Peter.—It passes as a separate kingdom to his younger son. See Italy (Southern): A. D. 1282–1300.

A. D. 1366-1369.—Pedro the Cruel of Castile and the invasion of the English Black Prince. —"Pedro the Cruel, King of Castile at this time (1350–1369), had earned his title by a series of murders, which dated from the time he was sixteen years old, and comprised his wife, his stepmother, two of his half-brothers, and a great number of the chief nobles of his kingdom. He was on bad terms with the pope, for he was the friend of Moors and Jews, and had plundered bishops and monasteries; he was hated in the court of France, for his murdered queen was the king's cousin, Blanche de Bourbon; he was at war with the King of Arragon. Instigated by this monarch and by the King of Navarre, the eldest of Pedro's half-brothers, Don Henry of Trastamere, who had been serving for some time with the Free Companions in Languedoc, conceived the idea of uniting them in a grand enterprise against the kingdom of Castile. Charles V. [of France] approved the project, and lent money and his best captain, Du Guesclin; Pope Urban V. contributed his blessing and money; and the Free Lances eagerly embraced a scheme which promised them the plunder of a new country." The expedition "succeeded without bloodshed. The people rose to welcome it, and Don Pedro was forced to escape through Portugal, and take ship hastily at Corunna. Don Henry was crowned in his palace at Burgos (April 1366). In his distress Don Pedro applied to the Prince of Wales [the Black Prince, then holding the government of Aquitaine] for support. There was no reason why England or Aquitaine should be mixed up in Spanish politics. Both countries required rest after an exhausting war. . . . But Pedro was a skilful diplomatist. He bribed the Prince of Wales by a promise to cede the province of Biscay." With the consent of his father, King Edward III. of England, the Prince took up the cause of the odious Don Pedro, and led an army of 24,000 horse, besides great numbers of archers, into Spain (A. D. 1367). At the decisive battle of Navarette the Spaniards and their allies were overwhelmingly defeated, Du Guesclin was taken prisoner, Don Henry fled, and Pedro was reinstated on the Castilian throne. "Then came disappointment. The prince demanded performance of the promises Don Pedro had made, and proposed to stay in Spain till they were acquitted. . . . For some months Edward vainly awaited the performance of his ally's promises. Then, as his troops were wasting away with

dysentery and other diseases caused by the strange climate, till it was said scarcely a fifth remained alive, Edward resolved to remove into Aquitaine, which Don Henry was attacking, and was glad to find that the passes of the Pyrenees were left open to him by the Kings of Arragon and Navarre (August 1367). . . . The results of Edward's mischievous policy soon became evident. All he had achieved in Spain was almost instantly undone by Don Henry, who crossed the Pyrenees a few weeks only after Edward had left Spain (Sept. 1367) recovered his kingdom in the course of the next year, and captured and killed Don Pedro a little later (March 1369). The whole power of Castile, which was far from being contemptible at sea, was then thrown into the scale against England." —C. H. Pearson, *Eng. Hist. in the Fourteenth Century, ch.* 8.

Also in: J. Froissart, *Chronicles (tr. by Johnes), bk.* 1, *ch.* 230–245.—P. Merimée, *Hist. of Peter the Cruel, v.* 2, *ch.* 7–11.—See, also, France: A. D. 1360–1380.

A. D. 1368-1479.— Castile under the House of Trastamere.— Discord and civil war.— Triumph of Queen Isabella.—The Castilian dynasty in Aragon.— Marriage of Isabella and Ferdinand.—"A more fortunate period began [in Castile] with the accession of Henry [of Trastamare, or Henry II.]. His own reign was hardly disturbed by any rebellion; and though his successors, John I. [1379] and Henry III. [1390], were not altogether so unmolested, especially the latter, who ascended the throne in his minority, yet the troubles of their time were slight, in comparison with those formerly excited by the houses of Lara and Haro, both of which were now happily extinct. Though Henry II.'s illegitimacy left him no title but popular choice, his queen was sole representative of the Cerdas, the offspring . . . of Sancho IV.'s elder brother. . . . No kingdom could be worse prepared to meet the disorders of a minority than Castile, and in none did the circumstances so frequently recur. John II. was but fourteen months old at his accession [1406]; and but for the disinterestedness of his uncle Ferdinand, the nobility would have been inclined to avert the danger by placing that prince upon the throne. In this instance, however, Castile suffered less from faction during the infancy of her sovereign than in his maturity. The queen dowager, at first jointly with Ferdinand, and solely after his accession to the crown of Aragon, administered the government with credit. . . . In external affairs their reigns were not what is considered as glorious. They were generally at peace with Aragon and Granada, but one memorable defeat by the Portuguese at Aljubarrota [August 14, 1385] disgraces the annals of John I., whose cause [attempting the conquest of Portugal] was as unjust as his arms were unsuccessful. This comparatively golden period ceases at the majority of John II. His reign was filled up by a series of conspiracies and civil wars, headed by his cousins John and Henry, the infants of Aragon, who enjoyed very extensive territories in Castile, by the testament of their father Ferdinand. Their brother the king of Aragon frequently lent the assistance of his arms. . . . These conspiracies were all ostensibly directed against the favourite of John II., Alvaro de Luna, who retained for 35 years an absolute control over his feeble master. . . . His fate is among the memorable lessons of history. After a life of troubles endured for the sake of this favourite, sometimes a fugitive, sometimes a prisoner, his son heading rebellions against him, John II. suddenly yielded to an intrigue of the palace, and adopted sentiments of dislike towards the man he had so long loved. . . . Alvaro de Luna was brought to a summary trial and beheaded; his estates were confiscated. He met his death with the intrepidity of Strafford, to whom he seems to have borne some resemblance in character. John II. did not long survive his minister, dying in 1454, after a reign that may be considered as inglorious, compared with any except that of his successor. If the father was not respected, the son fell completely into contempt. He had been governed by Pacheco, marquis of Villena, as implicitly as John by Alvaro de Luna. This influence lasted for some time afterwards. But the king inclining to transfer his confidence to the queen, Joanna of Portugal, and to one Bertrand de Cueva, upon whom common fame had fixed as her paramour, a powerful confederacy of disaffected nobles was formed against the royal authority. . . . They deposed Henry in an assembly of their faction at Avila with a sort of theatrical pageantry which has often been described. . . . The confederates set up Alfonso, the king's brother, and a civil war of some duration ensued, in which they had the support of Aragon. The queen of Castile had at this time borne a daughter, whom the enemies of Henry IV., and indeed no small part of his adherents, were determined to treat as spurious. Accordingly, after the death of Alfonso, his sister Isabel was considered as heiress of the kingdom. . . . Avoiding the odium of a contest with her brother, Isabel agreed to a treaty by which the succession was absolutely settled upon her [1469]. This arrangement was not long afterwards followed by the union of that princess with Ferdinand, son of the king of Aragon. This marriage was by no means acceptable to a part of the Castilian oligarchy, who had preferred a connexion with Portugal. And as Henry had never lost sight of the interests of one whom he considered, or pretended to consider, as his daughter, he took the first opportunity of revoking his forced disposition of the crown and restoring the direct line of succession in favour of the princess Joanna. Upon his death, in 1474, the right was to be decided by arms. Joanna had on her side the common presumptions of law, the testamentary disposition of the late king, the support of Alfonso king of Portugal, to whom she was betrothed, and of several considerable leaders among the nobility. . . . For Isabella were the general belief of Joanna's illegitimacy, the assistance of Aragon, the adherence of a majority both among the nobles and people, and, more than all, the reputation of ability which both she and her husband had deservedly acquired. The scale was, however, pretty equally balanced, till the king of Portugal having been defeated at Toro in 1476, Joanna's party discovered their inability to prosecute the war by themselves, and successively made their submission to Ferdinand and Isabella." Ferdinand of Aragon, by whose marriage with Isabella of Castile the two kingdoms became practically united, was himself of Castilian descent, being the grandson of that magnanimous Ferdinand who has been

mentioned above, as the uncle and joint guardian of John II. of Castile. In 1410, on the death of King Martin, the right of succession to the throne of Aragon had been in dispute, and Ferdinand was one of several claimants. Instead of resorting to arms, the contending parties were wisely persuaded to submit the question to a special tribunal, composed of three Aragonese, three Catalans, and three Valencians. "A month was passed in hearing arguments; a second was allotted to considering them; and at the expiration of the prescribed time it was announced to the people . . . that Ferdinand of Castile had ascended the throne. In this decision it is impossible not to suspect that the judges were swayed rather by politic considerations than a strict sense of hereditary right. It was therefore by no means universally popular, especially in Catalonia. . . . Ferdinand however was well received in Aragon. . . . Ferdinand's successor was his son Alfonso V., more distinguished in the history of Italy than of Spain. For all the latter years of his life he never quitted the kingdom that he had acquired by his arms [see ITALY: A. D. 1412–1447]; and, enchanted by the delicious air of Naples, intrusted the government of his patrimonial territories to the care of a brother and an heir. John II., upon whom they devolved by the death of Alfonso without legitimate progeny, had been engaged during his youth in the turbulent revolutions of Castile, as the head of a strong party that opposed the domination of Alvaro de Luna. By marriage with the heiress of Navarre he was entitled, according to the usage of those times, to assume the title of king, and administration of government, during her life. But his ambitious retention of power still longer produced events which are the chief stain on his memory. Charles, prince of Viana, was, by the constitution of Navarre, entitled to succeed his mother [1442]. She had requested him in her testament not to assume the government without his father's consent. That consent was always withheld. The prince raised what we ought not to call a rebellion; but was made prisoner. . . . After a life of perpetual oppression, chiefly passed in exile or captivity, the prince of Viana died in Catalonia [1461], at a moment when that province was in open insurrection upon his account. Though it hardly seems that the Catalans had any more general provocations, they persevered for more than ten years [until the capitulation of Barcelona, after a long siege, in 1472] with inveterate obstinacy in their rebellion, offering the sovereignty first to a prince of Portugal, and afterwards to Regnier duke of Anjou, who was destined to pass his life in unsuccessful competition for kingdoms." Ferdinand, who married Isabella of Castile, was a younger half-brother of prince Charles of Viana, and succeeded his father, John II., on the throne of Aragon, in 1479.— H. Hallam, *The Middle Ages, ch.* 4 (*v.* 2).

A. D. 1476-1492.— The last struggle of the Moors.— Fall of the city and kingdom of Granada.— "The days of the Moorish kingdom were already numbered when, in 1466, Aboul Hacem succeeded Ismael; but the disturbances in Castille emboldened him, and when, in 1476, the regular demand for tribute was made, he answered: 'Those who coined gold for you are dead. Nothing is made at Granada for the Christians but sword-blades and lance-points.' Such was the last proclamation of war from the Moors. Even the Imaums disapproved, and preached in the mosques of Granada, 'Woe to the Moslems in Andalusia!' 'The end is come,' they said; 'the ruins will fall on our heads!' Nevertheless, Aboul Hacem surprised the Aragonese city of Zahara with 60,000 inhabitants, and put them all to the sword or sold them into slavery; but he was not welcomed, evil was predicted, and he became more and more hated when he put four of the Abencerrages to death. The king and queen [Ferdinand, or Fernando, and Isabella] now began to prepare the whole strength of their kingdom for a final effort, not to be relaxed till Spain should be wholly a Christian land. . . . Don Rodrigo Ponce de Leon, who had become Marquis of Cadiz, made a sudden night attack upon Alhama, only eight leagues from Granada, and though the inhabitants fought from street to street he mastered it. . . . Alhama was a terrible loss to the Moors, and was bewailed in the ballad, 'Ay de me Al Hama,' which so moved the hearts of the people that it was forbidden to be sung in the streets of Granada. It has been translated by Byron, who has in fact united two ballads. . . . Alhama had once before been taken by St. Fernando, but could not then be kept, and a council was held by the 'Reyes Catolicos' [Ferdinand and Isabella], in which it was declared that it would take 5,000 mules' burthen of provisions sent several times a year, to support a garrison thus in the heart of the enemy's country. The high spirit of the queen, however, carried the day. She declared that the right thing to do was to take Loja to support Alhama, and, after causing the three chief mosques to be purified as Christian churches, she strained every effort [1482] to equip an army with which Fernando was to besiege Loja. On the day before he set out Isabel gave birth to twins — one dead, the other a daughter: and this was viewed as an ill omen. . . . Ali Atar, one of the bravest of the Moors, defeated Fernando and forced him to retreat with the loss of his baggage. Aboul Hacem was prevented from following up his success by the struggles of the women in his harem. His favourite wife was a Christian by birth, named Isabel de Solis, the daughter of the Alcayde of Bedmar; but she had become a renegade, and was commonly called Zoraya, or the Morning Star. Childless herself, she was vehemently set on the promotion of Abou-Abd-Allah, son of another wife, Ayescha, who is generally known by the Spanish contraction of his name, Boabdil; also in Arabic as Al Zaquir, the little, and in Spanish as 'el Rey Chico.' Such disaffection was raised that Aboul Hacem was forced to return home, where he imprisoned Ayescha and her son; but they let themselves down from the window with a rope twisted of the veils of the Sultana's women, and, escaping to the palace or Albaycin, there held out against him, supported by the Abencerrages. The Zegris held by Aboul Hacem, and the streets of Granada ran red with the blood shed by the two factions till, in 1482, while the elder king was gone to relieve Loja,

the younger one seized the Alhamra; and Aboul Hacem, finding the gates closed against him, was obliged to betake himself to Malaga, where his brother Abd Allah, called Al Zagal, or the young, was the Alcayde."—C. M. Yonge, *The Story of the Christians and Moors in Spain, ch.* 24.—"The illegal power of Boabdil was contested by his uncle, Az-Zagal (El Zagal), who held a precarious sway for four years, until 1487, when Boabdil again came to the throne. This was rendered more easy by the fact that, in a battle between the Moors and Christians in the territory of Lucena, not long after his accession, Boabdil was taken prisoner by the Christian forces. By a stroke of policy, the Christian king released his royal prisoner, in the hope that through him he might make a treaty. Boabdil went to Loja, which was at once besieged by Ferdinand, and this time captured, and with it the Moorish king again fell into the Christian hands. Again released, after many difficulties he came into power. The Christian conquests were not stayed by these circumstances. In 1487, they captured Velez Malaga, on the coast a short distance east of Malaga, and received the submission of many neighboring towns. In the same year Malaga was besieged and taken. In 1489, Baeza followed; then the important city of Almeria, and at last the city of Granada stood alone to represent the Mohammedan dominion in the Peninsula. The strife between Boabdil and El Zagal now came to an end; and the latter, perhaps foreseeing the fatal issue, embarked for Africa, leaving the nominal rule and the inevitable surrender to his rival. . . . The army of Ferdinand and Isabella was in splendid condition, and reinforcements were arriving from day to day. System and order prevailed, and the troops, elated with victory, acknowledged no possibility of failure. Very different was the condition of things and very depressed the spirit of the people in Granada. Besides its own disordered population, it was crowded with disheartened fugitives, anxious for peace on any terms. The more warlike and ambitious representatives of the tribes were still quarrelling in the face of the common ruin, but all parties joined in bitter denunciations of their king. When he had been released by Ferdinand after the capture of Loja, he had promised that when Guadix should be taken and the power of El Zagal destroyed, he would surrender Granada to the Christian king, and retire to some seignory, as duke or marquis. But now that the 'casus' had arrived, he found . . . that the people would not permit him to keep his promise. . . . The only way in which Boabdil could appease the people was by an immediate declaration of war against the Christians. This was in the year 1490. When this was made known, Ferdinand and Isabella were at Seville, celebrating the marriage of the Infanta Isabel with Alfonso, crown prince of Portugal. The omen was a happy one. The armies of Spain and Portugal were immediately joined to put an end to the crusade. With 5,000 cavalry and 20,000 foot, the Spanish king advanced to the Sierra Elvira, overlooking the original site of the Granadine capital. The epic and romantic details of the conquest may be read elsewhere. . . . There were sorties on the part of the Moors, and chivalrous duels between individuals, until the coming of winter, when, leaving proper guards and garrisons, the principal Christian force retired to Cordova, to make ready for the spring. El Zagal had returned from Africa, and was now fighting in the Christian ranks. It was an imposing army which was reviewed by Ferdinand on the 26th of April, 1491, in the beautiful Vega, about six miles from the city of Granada; the force consisted of 10,000 horse and 40,000 foot, ready to take position in the final siege. . . . It was no part of the Spanish king's purpose to assault the place. . . . He laid his siege in the Vega, but used his troops in devastating the surrounding country, taking prisoners and capturing cattle. . . . Meantime the Christian camp grew like a city, and when Queen Isabella came with her train of beauty and grace, it was also a court city in miniature." In July, an accidental fire destroyed the whole encampment, and roused great hopes among the Moors. But a city of wood (which the pious queen called Santa Fé — the Holy Faith) soon took the place of the tents, and "the momentary elation of the Moors gave way to profound depression; and this induced them to capitulate. The last hour had indeed struck on the great horologe of history; and on the 25th of November the armistice was announced for making a treaty of peace and occupancy."— H. Coppée, *Hist. of the Conquest of Spain by the Arab-Moors, bk.* 8, *ch.* 5 (*v.* 2).—"After large discussion on both sides, the terms of capitulation were definitively settled. . . . The inhabitants of Granada were to retain possession of their mosques, with the free exercise of their religion, with all its peculiar rights and ceremonies; they were to be judged by their own laws, under their own cadis or magistrates, subject to the general control of the Castilian governor; they were to be unmolested in their ancient usages, manners, language, and dress; to be protected in the full enjoyment of their property, with the right of disposing of it on their own account, and of migrating when and where they would; and to be furnished with vessels for the conveyance of such as chose within three years to pass into Africa. No heavier taxes were to be imposed than those customarily paid to their Arabian sovereigns, and none whatever before the expiration of three years. King Abdallah [Boabdil] was to reign over a specified territory in the Alpuxarras, for which he was to do homage to the Castilian crown. . . . The city was to be surrendered in 60 days from the date of the capitulation;" but owing to popular disturbances in Granada, the surrender was actually made on the 2d of January, 1492. Boabdil soon tired of the petty sovereignty assigned to him, sold it to Ferdinand and Isabella, passed over to Fez, and perished in one of the battles of his kinsmen.— W. H. Prescott, *Hist. of the Reign of Ferdinand and Isabella, ch.* 15.

A. D. 1496-1517.—Marriage of the Infanta Joanna to the Austro-Burgundian Archduke Philip.—Birth of their son Charles, the heir of many crowns.—Insanity of Joanna.—Death of Queen Isabella.—Regency of Ferdinand.—His second marriage and his death.—Accession of Charles, the first of the Austro-Spanish dynasty.—Joanna, second daughter of Ferdinand and Isabella, was married in 1496 to "the archduke Philip, son of the emperor Maximilian, and sovereign, in right of his mother [Mary of Burgundy], of the Low Countries. The first fruit of this marriage was the celebrated Charles V., born at Ghent, February 24th, 1500, whose birth was no sooner announced to Queen Isabella than she predicted that to this infant would one day descend the rich inheritance of the Spanish monarchy. The premature death of the heir apparent, Prince Miguel, not long after [and also of the queen of Portugal, the elder daughter of Isabella and Ferdinand], prepared the way for this event by devolving the succession on Joanna, Charles's mother. From that moment the sovereigns were pressing in their entreaties that the archduke and his wife would visit Spain. . . . In the latter part of 1501, Philip and Joanna, attended by a numerous suite of Flemish courtiers, set out on their journey," passing through France and being royally entertained on the way. In Spain, they first received the usual oath of fealty from the Castilian cortes, and then "were solemnly recognized by the four 'arms' of Aragon as successors to the crown, in default of male issue of King Ferdinand. The circumstance is memorable as affording the first example of the parliamentary recognition of a female heir apparent in Aragonese history. Amidst all the honors so liberally lavished on Philip, his bosom secretly swelled with discontent, fomented still further by his followers, who pressed him to hasten his return to Flanders, where the free and social manners of the people were much more congenial to their tastes than the reserve and stately ceremonial of the Spanish court. . . . Ferdinand and Isabella saw with regret the frivolous disposition of their son-in-law. . . . They beheld with mortification his indifference to Joanna, who could boast few personal attractions, and who cooled the affections of her husband by alternations of excessive fondness and irritable jealousy." Against the remonstrances of king, queen and cortes, as well as in opposition to the wishes of his wife, Philip set out for Flanders in December, again traveling through France, and negotiating on the way a treaty with Louis XII. which arranged for the marriage of the infant Charles with princess Claude of France—a marriage which never occurred. The unhappy Joanna, whom he left behind, was plunged in the deepest dejection, and exhibited ere long decided symptoms of insanity. On the 10th of March, 1503, she gave birth to her second son, Ferdinand, and the next spring she joined her husband in Flanders, but only to be worse treated by him than before. Queen Isabella, already declining in health, was deeply affected by the news of her daughter's unhappiness and increasing disturbance of mind, and on the 26th of November, 1504, she died. By her will, she settled the crown of Castile on the infanta Joanna as "queen proprietor," and the archduke Philip as her husband, and she appointed King Ferdinand (who was henceforth king in Aragon, but not in Castile), to be sole regent of Castile, in the event of the absence or incapacity of Joanna, until the latter's son Charles should attain his majority. On the day of the queen's death Ferdinand resigned the crown of Castile, which he had worn as her consort, only, and caused to be proclaimed the accession of Joanna and Philip to the Castilian throne. "The king of Aragon then publicly assumed the title of administrator or governor of Castile, as provided by the queen's testament." He next convened a cortes at Toro, in January, 1505, which approved and ratified the provisions of the will and "took the oaths of allegiance to Joanna as queen and lady proprietor, and to Philip as her husband. They then determined that the exigency contemplated in the testament, of Joanna's incapacity, actually existed, and proceeded to tender their homage to King Ferdinand, as the lawful governor of the realm in her name." These arrangements were unsatisfactory to many of the Castilian nobles, who opened a correspondence with Philip, in the Netherlands, and persuaded him "to assert his pretensions to undivided supremacy in Castile." Opposition to Ferdinand's regency increased, and it was fomented not only by Philip and his friends, but by the king of France, Louis XII. To placate the latter enemy, Ferdinand sought in marriage a niece of the French king, Germaine, daughter of Jean de Foix, and negotiated a treaty, signed at Blois, October 12, 1505, in which he resigned his claims on Naples to his intended bride and her heirs. Louis was now detached from the interests of Philip, and refused permission to the archduke to pass through his kingdom. But Ferdinand, astute as he was, allowed himself to be deceived by his son-in-law, who agreed to a compromise, known as the concord of Salamanca, which provided for the government of Castile in the joint names of Ferdinand, Philip, and Joanna, while, at the same time, he was secretly preparing to transfer his wife and himself to Spain by sea. On the first attempt they were driven to England by a storm; but in April, 1506, Philip and Joanna landed at Coruña, in Spain, and in June Ferdinand was forced to sign and swear to an agreement "by which he surrendered the entire sovereignty of Castile to Philip and Joanna, reserving to himself only the grand-masterships of the military orders, and the revenues secured by Isabella's testament." Philip took the government into his own hands, endeavoring to obtain authority to place his wife in confinement, as one insane; but this the Castilians would not brook. Otherwise he carried things with a high hand, surrounding himself with Flemish favorites, and revolutionizing the government in every branch and the court in every feature. His insolence, extravagance and frivolity excited general disgust, and would probably have provoked serious revolts, if the country had been called

upon to endure them long. But Philip's reign was brief. He sickened, suddenly, of a fever, and died on the 25th of September, 1506. His demented widow would not permit his body to be interred. A provisional council of regency carried on the government until December. After that it drifted, with no better authoritative guidance than that of the poor insane queen, until July 1507, when Ferdinand, who had been absent, in Naples, during the year past, returned and was joyfully welcomed. His unfortunate daughter "henceforth resigned herself to her father's will. . . . Although she survived 47 years, she never quitted the walls of her habitation; and although her name appeared jointly with that of her son, Charles V., in all public acts, she never afterwards could be induced to sign a paper, or take part in any transactions of a public nature. . . . From this time the Catholic king exercised an authority nearly as undisputed, and far less limited and defined, than in the days of Isabella." He exercised this authority for nine years, dying on the 23d of January, 1516. By his last will he settled the succession of Aragon and Naples on his daughter Joanna and her heirs, thus uniting the sovereignty of those kingdoms with that of Castile, in the same person. The administration of Castile during Charles' absence was intrusted to Ximenes, and that of Aragon to the king's natural son, the archbishop of Saragossa. In September, 1517, Charles, the heir of many kingdoms, arrived in Spain from the Netherlands, where his youth had been spent. Two months later Cardinal Ximenes died, but not before Charles had rudely and ungratefully dismissed him from the government. The queen, Joanna, was still living; but her arbitrary son had already commanded the proclamation of himself as king.— W. H. A. D. 1518-1522. — Popular discontent.— Election of Charles to the German imperial throne.— Rebellion of the Holy Junta, and its failure.—Absolutism of the crown established. — Charles had not been long in Spain before "symptoms of discontent . . . were every where visible. Charles spoke the Spanish language imperfectly: his discourse was consequently slow, and delivered with hesitation; and from that circumstance many of the Spaniards were induced to regard him as a prince of a slow and narrow genius. But the greatest dissatisfaction arose from his attachment to his Flemish favourites, who engrossed or exposed to sale every office of honour or emolument, and whose rapacity was so unbounded that they are said to have remitted to the Netherlands no less a sum than 1,100,000 ducats in the space of ten months. . . . While Spain, agitated by a general discontent, was ready for rebellion, a spacious field was opened to the ambition of her monarch. The death of the Emperor Maximilian [1519] had left vacant the imperial throne of Germany. The Kings of Spain, of France, and of England, offered themselves as candidates for this high dignity," and Charles was chosen, entering now upon his great career as the renowned Emperor, Charles V. (see Germany: A. D. 1519). "Charles received the news of his election to the imperial throne with the joy that was natural to a young and aspiring mind. But his elevation was far from affording the same satisfaction to his Spanish subjects, who foresaw that their blood and their treasures would be lavished in the support of German politics." With great difficulty he obtained from the Cortes money sufficient to enable him to proceed to Germany in a suitable style. Having accomplished this, he sailed from Corunna in May, 1520, leaving his old preceptor, now Cardinal Adrian, of Utrecht, to be Regent during his absence. "As soon as it was understood that, although the Cortes had voted him a free gift, they had not obtained the redress of any grievance, the indignation of the people became general and uncontrollable. The citizens of Toledo took arms, attacked the citadel, and compelled the governor to surrender. Having, in the next place, established a democratical form of government, composed of deputies from the several parishes of the city, they levied troops, and appointed for their commander Don Juan de Padilla, son of the Commendator of Castile, a young man of an ambitious and daring spirit, and a great favourite with the populace. Segovia, Burgos, Zamora, and several other cities, followed the example of Toledo." Segovia was besieged by Fonseca, commander-in-chief in Castile, who, previously, destroyed a great part of the town of Medino del Campo by fire, because its citizens refused to deliver to him a train of artillery. Valladolid now rose in revolt, notwithstanding the presence of the Regent in the city, and forced him to disavow the proceedings of Fonseca.— J. Bigland, *Hist. of Spain, v.* 1, *ch.* 12.—"In July [1520], deputies from the principal Castilian cities met in Avila; and having formed an association called the Santa Junta, or Holy League, proceeded to deliberate concerning the proper methods of redressing the grievances of the nation. The Junta declared the authority of Adrian illegal, on the ground of his being a foreigner, and required him to resign it; while Padilla, by a sudden march, seized the person of Joanna at Tordesillas. The unfortunate queen displayed an interval of reason, during which she authorised Padilla to do all that was necessary for the safety of the kingdom; but she soon relapsed into her former imbecility, and could not be persuaded to sign any more papers. The

Junta nevertheless carried on all their deliberations in her name; and Padilla, marching with a considerable army to Valladolid, seized the seals and public archives, and formally deposed Adrian. Charles now issued from Germany circular letters addressed to the Castilian cities, making great concessions, which, however, were not deemed satisfactory by the Junta; who, conscious of their power, proceeded to draw up a remonstrance, containing a long list of grievances. . . . Charles having refused to receive the remonstrance which was forwarded to him in Germany, the Junta proceeded to levy open war against him and the nobles; for the latter, who had at first sided with the Junta, finding their own privileges threatened as well as those of the King, began now to support the royal authority. The army of the Junta, which numbered about 20,000 men, was chiefly composed of mechanics and persons unacquainted with the use of arms; Padilla was set aside, and the command given to Don Pedro de Giron, a rash and inexperienced young nobleman." From this time the insurrection failed rapidly. In December, the royalists recovered Tordesillas and the person of Queen Joanna; and in April, 1521, Padilla was defeated, taken prisoner and executed, near Villalar. "This defeat proved the ruin of the Junta. Valladolid and most of the other confederated towns now submitted, but Toledo, animated by the grief and courage of Padilla's widow, still held out." Even after the surrender of the city, "Doña Maria retired to the citadel and held it four months longer; but on the 10th Feb. 1522, she was compelled to surrender, and escaped in disguise to Portugal; after which tranquillity was re-established in Castile."— T. H. Dyer, *Hist. of Modern Europe, bk.* 2, *ch.* 3 (*v.* 1).—"The insurrection was a failure; and the blow which crushed the insurgents on the plains of Villalar deprived them [the Spaniards at large] for ever of the few liberties which they had been permitted to retain. They were excluded from all share in the government, and were henceforth summoned to the cortes only to swear allegiance to the heir apparent, or to furnish subsidies for their master. . . . The nobles, who had stood by their master in the struggle, fared no better. . . . They gradually sunk into the unsubstantial though glittering pageant of a court. Meanwhile the government of Castile, assuming the powers of both making the laws and enforcing their execution, became in its essential attributes nearly as absolute as that of Turkey."—W. H. Prescott, *Hist. of the Reign of Philip II., bk.* 6, *ch.* 1.

A. D. 1559-1563.—Early measures of Philip II.—His stupid and stifling despotism.—His attempt to shut knowledge out of the kingdom.—His destruction of commerce and industry.—His choice of Madrid for a capital.—His building of the Escorial.—"In the beginning of his reign he [Philip II.] issued a most extraordinary decree. . . . That document is a signal revelation of the policy which Philip adopted as the very soul of his Government. Determined to stop by all imaginable means the infiltration into Spain of the doctrines of the religious reformation which agitated Europe, it seems that he planned to isolate her intellect from that of the rest of the world. . . . For this purpose he ordered that none of his subjects, without any exception whatever, should leave the Kingdom 'to learn, or to teach, or to read anything,' or even 'reside' in any of the universities, colleges or schools established in foreign parts. To those who were thus engaged he prescribed that they should return home within four months. Any ecclesiastic violating this decree was to be denationalized and lose all his temporalities; any layman was to be punished with the confiscation of his property and perpetual exile. Thus a sort of Chinese legislation and policy was adopted for Spain. There was to be on her frontiers a line of custom-houses through which the thought of man could not pass without examination. No Spaniard was to receive or to communicate one idea without the leave of Philip. . . . In 1560, the Cortes of Castile had their second meeting under the reign of Philip. . . . The Cortes presented to Philip one hundred and eleven petitions. . . . To those petitions which aimed at something practicable and judicious he gave some of his usual evasive answers, but he granted very readily those which were absurd. For instance, he promulgated sumptuary ordinances which were ridiculous, and which could not possibly have any salutary effects. He also published decrees which were restrictive of commerce, and prohibited the exportation of gold, silver, grains, cattle and other products of the soil, or of the manufacturing industry of the country. . . . In the meantime, the financial condition of the Kingdom was rapidly

growing worse, and the deficit resulting from the inequality of expenditure and revenue was assuming the most alarming proportions. All the ordinary and extraordinary means and resources had been exhausted. . . . Yet, on an average, Philip received annually from his American Dominions alone more than 1,200,000 ducats — which was at least equivalent to $6,000,000 at the present epoch. The Council of Finances, or Hacienda, after consulting with Philip, could not devise anything else, to get out of difficulty, than to resort again to the sale of titles of nobility, the sale of vassals and other Royal property, the alienation of certain rights, and the concession of privileges. . . . It is difficult to give an idea of the wretched administration which had been introduced in Spain, and of those abuses which, like venomous leeches, preyed upon her vitals. Suffice it to say that in Castile, for instance, according to a census made in 1541, there was a population of near 800,000 souls, and that out of every eight men there was one who was noble and exempt from taxation, thereby increasing the weight of the burden on the shoulders of the rest; and as if this evil was not already unbearable, Philip was selling profusely letters patent of nobility. . . . In these conjunctures [1560], Philip, who had shown, on all occasions, that he preferred residing in Madrid, . . . determined to make that city the permanent seat of the Court and of the Supreme Government, and therefore the capital of the Monarchy. That barren and insalubrious locality presented but one advantage, if it be one of much value, that of being a central point. . . . Reason and common sense condemned it from the beginning. . . . Shortly after having selected Madrid as his capital, Philip had laid [1563] with his own hands, in the vicinity of that city, the first stone of the foundations of the Escorial, that eighth marvel of the world, as it is called by the Spaniards."— C. Gayarré, *Philip II. of Spain, ch.* 4.—"The common tradition that Philip built the Escorial in pursuance of a vow which he made at the time of the great battle of St. Quentin, the 10th of August, 1557, has been rejected by modern critics. . . . But a recently discovered document leaves little doubt that such a vow was actually made. However this may have been, it is certain that the king designed to commemorate the event by this structure, as is intimated by its dedication to St. Lawrence, the martyr on whose day the victory was gained. The name given to the place was 'El Sitio de San Lorenzo el Real.' But the monastery was better known from the hamlet near which it stood — El Escurial, or El Escorial — which latter soon became the orthography generally adopted by the Castilians. . . . The erection of a religious house on a magnificent scale, that would proclaim to the world his devotion to the Faith, was the predominant idea in the mind of Philip. It was, moreover, a part of his scheme to combine in the plan a palace for himself. . . . The site which, after careful examination, he selected for the building, was among the mountains of the Guadarrama, on the borders of New Castile, about eight leagues northwest of Madrid. . . . In 1584, the masonry of the Escorial was completed. Twenty-one years had elapsed since the first stone of the monastery was laid. This certainly must be regarded as a short period for the erection of so stupendous a pile. . . . Probably no single edifice ever contained such an amount and variety of inestimable treasures as the Escorial,— so many paintings and sculptures by the greatest masters,— so many articles of exquisite workmanship, composed of the most precious materials." It was despoiled by the French in 1808, and in 1837 the finest works of art surviving were removed to Madrid. "The Escorial ceased to be a royal residence. Tenantless and unprotected, it was left to the fury of the blasts which swept down the hills of the Guadarrama."— W. H. Prescott, *Hist. of the Reign of Philip II., bk.* 6, *ch.* 2 (*v.* 3).

A. D. 1596.— Capture and plundering of Cadiz by the English and Dutch.—"In the beginning of 1596, Philip won an important triumph by the capture of Calais. But this awoke the alarm of England and of the Hollanders as much as of the French. A joint expedition was equipped against Spain in which the English took the lead. Lord Admiral Howard sailed with a fleet of 150 vessels against Cadiz, and the Earl of Essex commanded the land forces. On June 21 the Spanish ships which assembled for the defence of the town were entirely defeated. Essex was the first to leap on shore, and the English troops easily took the city. The clem-

ency of the English soldiers contrasted favourably with the terrible barbarities of the Spaniards in the Netherlands. 'The mercy and the clemency that had been showed here,' wrote Lord Howard, 'will be spoken of throughout the world.' No man or woman was needlessly injured; but Cadiz was sacked, and the shipping in its harbour destroyed. Essex wished to follow up this exploit by a further attack upon Spain; but Howard, who had accomplished the task for which he had been sent, insisted on returning home."—M. Creighton, *The Age of Elizabeth, bk. 7, ch. 3.*—"The results of this expedition were considerable, for the king's navy was crippled, a great city was destroyed, and some millions of plunder had been obtained. But the permanent possession of Cadiz, which, in such case, Essex hoped to exchange for Calais, and the destruction of the fleet at the Azores—possible achievements both, and unwisely neglected—would have been far more profitable, at least to England."—J. L. Motley, *Hist. of the United Netherlands, ch. 32 (v. 3).*

A. D. 1598.—Accession of Philip III.

A. D. 1598-1700.—The first century of decline and decay.—"Spain became united and consolidated under the Catholic kings [Ferdinand and Isabella]; it became a cosmopolitan empire under Charles; and in Philip, austere, bigoted, and commanding, its height of glory was reached. Thenceforth the Austrian supremacy in the peninsula—the star of the House of Habsburg—declined, until a whiff of diplomacy was sufficient to extinguish its lights in the person of the childless and imbecile Charles II. Three reigns—Philip III. (1598–1621), Philip IV. (1621–1665), and Charles II. (1665–1700)—fill this century of national decline, full as it is of crowned idiocy, hypochondria, and madness, the result of incestuous marriages, or natural weakness. The splendid and prosperous Spanish empire under the emperor and his son—its vast conquests, discoveries and foreign wars,—becomes transformed into a bauble for the caprice of favorites, under their successors. . . . Amid its immeasurable wealth, Spain was bankrupt. The gold, and silver, and precious stones of the West, emptied themselves into a land the poorest and most debt-laden in Europe, the most spiritually ignorant despite the countless churches, the most notorious for its dissolute nobility, its worthless officials, its ignoble family relations, its horrible moral aberrations pervading all grades of the population; and all in vain. The mighty fancy, the enthusiastic loyalty, the fervid faith of the richly endowed Spaniard were not counterbalanced by humbler but more practical virtues,—love of industry, of agriculture, of manufactures. The Castilians hated the doings of citizens and peasants; the taint of the Arab and the Jew was on the profession of money-getting. Thousands left their ploughs and went to the Indies, found places in the police, or bought themselves titles of nobility, which forthwith rendered all work dishonorable. The land grew into a literal infatuation with miracles, relics, cloisters, fraternities, pious foundations of every description. The church was omnipotent. Nobody cultivated the soil. Hundreds of thousands lived in the convents. Begging soup at the monastery gates,—such is a type of the famishing Spain of the 17th century. In economic, political, physical, moral, and intellectual aspects, a decay pervaded the peninsula under the later Habsburgers, such as no civilized nation has ever undergone. The population declined from 10,000,000 under Charles V. (Charles I. of Spain) to 6,000,000 under Charles II. The people had vanished from hundreds of places in New Castile, Old Castile, Toledo, Estremadura, and Andalusia. One might travel miles in the lovely regions of the South, without seeing a solitary cultivated field or dwelling. Seville was almost depopulated. Pecuniary distress at the end of the 17th century reached an unexampled height; the soldiers wandered through the cities begging; nearly all the great fortresses from Barcelona to Cadiz were ruinous; the king's servants ran away because they were neither paid nor fed; more than once there was no money to supply the royal table; the ministers were besieged by high officials and officers seeking to extort their pay long due; couriers charged with communications of the highest importance lingered on the road for lack of means to continue their journey. Finance was reduced to tricks of low deceit and robbery. . . . The idiocy of the system of taxation was unparalleled. Even in 1594 the cortes complained that the merchant, out of every 1,000 ducats capital, had to pay 300 ducats in taxes; that no tenant-farmer could maintain himself, however low his rent might be; and that the taxes exceeded the income of numerous estates. Bad as the system was under Philip II., it became worse under his Austrian successors. The tax upon the sale of food, for instance, increased from ten to fourteen per cent. Looms were most productive when they were absolutely silent. Almost the entire household arrangements of a Spanish family were the products of foreign industries. In the beginning of the 17th century, five-sixths of the domestic and nine-tenths of the foreign trade were in the hands of aliens. In Castile, alone, there were 160,000 foreigners, who had gained complete possession of the industrial and manufacturing interests. 'We cannot clothe ourselves without them, for we have neither linen nor cloth; we cannot write without them, for we have no paper,' complains a Spaniard. Hence, the enormous masses of gold and silver annually transmitted from the colonies passed through Spain into French, English, Italian, and Dutch pockets. Not a real, it is said, of the 35,000,000 of ducats which Spain received from the colonies in 1595, was found in Castile the following year. In this indescribable retrogression, but one interest in any way prospered—the Church. The more agriculture, industry, trade declined, the more exclusively did the Catholic clergy monopolize all economic and intellectual life."—J. A. Harrison, *Spain, ch. 23.*

A. D. 1637-1640.—The war on the French frontier.—Siege and battle of Fontarabia.—French invasion of Roussillon.—Causes of disaffection in Catalonia.—In 1637, a Spanish army, 12,000 strong, crossed the Pyrenees under the command of the Duke of Medina del Rio-Seco, Admiral of Castile. "He took St Jean-de-Luz without difficulty, and was advancing to the siege of Bayonne, when the old Duke d'Epernon, governor of Guienne, . . . threw himself into it. There was little time for preparations; but the Spanish commander, on being told he would find Bayonne destitute of defence, replied that could not be said of any place which contained the Duke d'Epernon. He accordingly refrained from laying siege to Bayonne; and all his other enterprises having failed from the vigilant activity of Epernon, he abandoned St Jean-de-Luz, with some other posts in its neighbourhood, and the seat of war was speedily transferred from Guienne to Languedoc: Olivarez, in forming his plans against that province, had expected a revolt among its numerous and often rebellious inhabitants. . . . The hopes, however, entertained by Olivarez . . . proved utterly fallacious." The Spanish army, under Serbellone, invested Leucate, the first fortress reached on entering Languedoc from Roussillon, and besieged it for a month; but was attacked at the end of that time by the Duke de Halluin, son of the late Mareschal Schomberg, and driven from its works, with the loss of all its artillery, and 3,000 men. "In the following season [1638] the French, in their turn, attempted the invasion of Spain, but with as little success as the Spaniards had obtained in Guienne or Languedoc. . . . An army, amounting to not less than 15,000 infantry and 2,000 cavalry, under the orders of the Prince of Condé, the father of the great Condé, and a devoted retainer of Richelieu, crossed the frontier, took Irun, and laid siege to Fontarabia, which is situated on a peninsula, jutting into the river Bidassoa. A formidable French fleet was, at the same time, stationed on the coast of Guipuscoa, to co-operate with this army," and, after failing in one attack, it succeeded in destroying the Spanish ships sent to the succor of Fontarabia. "Fontarabia being considered as the key to Spain, on the entrance to the kingdom from Bayonne, its natural strength had been greatly improved by fortifications." Its garrison held out stoutly until the arrival of a relieving army of 13,000, led by the Admiral of Castile. Nearly a month elapsed before the latter ventured to attack the besieging force; but when he did, "while the Spaniards lost only 200 men, the French were totally defeated, and precipitately driven forth from their intrenchments. Many of them were killed in the attack, and a still greater number were drowned in attempting to pass the Bidassoa. Those who escaped fled with precipitation to Bayonne. . . . But Spain was hardly relieved from the alarm of the invasion of Navarre when she was threatened with a new danger, on the side of Roussillon. The Prince of Condé . . . was again entrusted with a military expedition against the Spanish frontiers. . . . The small county of Roussillon, which had hitherto belonged to Spain as an appendage of Catalonia, lies on the French side of the higher Pyrenees; but a lower range of mountains, called the Courbieres, branching off from them, and extending within a league of the Mediterranean shore, divides Roussillon from Languedoc. At the extremity of these hills, and about a league from the sea, stood the fortress of Salsas [or Salces], which was considered as the key of Spain on the dangerous side of Roussillon and Catalonia." Salsas was invested by the French, 1639, and taken after a siege of forty days. But Olivarez, the Spanish minister, adopted measures for the recovery of the important fortress, so energetic, so peremptory, and so unmeasured in the exactions they made upon the people of Catalonia, that Salsas was retaken in January, 1640. "The long campaign in the vicinity of Salsas, though it proved ultimately prosperous to the Spanish arms, fostered in the bosom of the kingdom the seeds of rebellion. Those arbitrary measures which Olivarez enjoined to his Generals, may have gained Salsas, but they lost Catalonia. The frequent intercourse which took place between the Catalans and French soldiery, added fuel to those flames nearly ready to burst forth, and, shortly afterwards, excited the fatal insurrection at Barcelona."—J. Dunlop, *Memoirs of Spain during the Reigns of Philip IV. and Charles II., v.* 1, *ch.* 4.

A. D. 1640-1642.—Revolt of Catalonia and Portugal, with the aid of France.—French conquest of Roussillon.—After their defeat of Condé at Salces, Olivarez ordered the Castilian troops to take up their winter quarters in Catalonia; and, "commanding the Catalonians to raise and equip 6,000 soldiers for the wars of Italy, he assigned them their proportion of the expenses of the state, enjoining the states to raise it, by a decree of the king. Had the Castillian troops remained tranquil and orderly, overawing the Catalonians by their presence and their discipline, without enraging them by their excesses and their insolence, perhaps Olivarez might have carried through his bold design, and annihilated, one by one, the destructive privileges of the various provinces. But, on the contrary, they committed every sort of violence and injustice. . . . The Catalonians, stirred up to vengeance, sought retribution in chance combats, lost their dread of the Castillian troops by frequent contests with them, and were excited almost to frenzy by their violence and rapine. In the mean time, the states of Catalonia refused to obey the royal decree, and sent two deputies to remonstrate with the king and his minister. These messengers

unfortunately executed their commission in an insolent and menacing tone; and Olivarez, of a haughty and inflexible character, caused them instantly to be arrested. These tidings reached Barcelona at the moment when some fresh outrage, committed by the Castillian soldiers, had excited popular indignation to the highest pitch; and a general insurrection was the immediate consequence. The viceroy was slain upon the spot, and a negotiation was instantly entered into with France in order to procure support in rebellion. The courage of Olivarez did not fail even under this fresh misfortune: all the disposable troops in Spain were instantly directed upon Catalonia; and all the other provinces, but more especially Portugal, were ordered to arm for the suppression of the revolt. Turbulent subjects and interested allies are always sure to take advantage of the moment of difficulty. The Portuguese, hating, with even more bitter animosity than the Catalonians, the yoke of Castille, oppressed by Vasconcellos, who ruled them under the vice-queen, duchess of Mantua, and called upon to aid in suppressing an insurrection to which they looked with pleasure and hope, now instantly threw off the rule of Spain. A conspiracy burst forth, which had been preparing under the knowledge and advice of Richelieu for more than three years; and the duke of Braganza, a prince of no great abilities, was proclaimed king. . . . In the mean time the marquis de los Velez had taken the command of the army sent against the Catalonian rebels; and a willing instrument of the minister's vengeance, he exercised the most barbarous cruelties as he marched on into the refractory province. The town of Tortosa was taken and sacked by his soldiers, and the people subjected to every sort of violence. Fire, massacre, and desolation marked his progress; but, instead of inspiring crouching terror, and trembling self-abandonment, his conduct roused up lion-like revenge. Hurrying on the negotiations with France, the Catalonians accepted any terms which Richelieu chose to offer, declared themselves subject to the French crown, and pronounced the authority of Spain at an end for ever in Catalonia. A small corps of French troops was immediately thrown forward from Roussillon, and advanced to Taragona under the command of D'Espenan, a general who had shown great skill and courage at Salces. The Catalonians, with the usual bravado of their nation, had represented their army as a thousandfold stronger, both in numbers and discipline, than it really was; and the French officers were in consequence lamentably disappointed when they saw the militia which was to support them, and still more disappointed when they beheld that militia in face of an enemy. As a last resource against the large Spanish force under Los Velez, D'Espenan threw himself into Taragona, in opposition to the advice of Besançon, who was employed, on the part of France, in organizing the Catalonians. Here he was almost immediately besieged; and, being destitute both of provisions and ammunition, was soon forced to sign a capitulation, whereby he agreed to evacuate the territory of Spain with all the troops which had entered Catalonia from France. This convention he executed, notwithstanding all remonstrances and petitions on the part of the Catalonians; and, retreating at once from Taragona to the French frontier, he abandoned the field to the enemy. Had Olivarez now seized the favourable moment, . . . it is probable — it is more than probable — that Catalonia would at once have been pacified, and that her dangerous privileges would in part have been sacrificed to the desire and necessity of peace. . . . But the count-duke sought revenge as much as advantage. . . . Continued severity only produced a continuance of resistance: the Catalonians sustained themselves till the French forces returned in greater numbers, and with more experienced commanders: the tide of success turned against the Castillians; and Los Velez was recalled to give place to Leganez. . . . In various engagements . . . the Spanish armies were defeated by the French: the Catalonians themselves became better soldiers under the severe discipline of necessity; and though the Spanish fleet defeated the French off Taragona, and saved that city from the enterprises of La Mothe, the general result of the campaign was decidedly unfavourable to Spain. At the same time, the French were making progress in Roussillon; and in the year 1642 the king himself prepared to invade that small territory, with the evident intention of dissevering it from the Spanish crown. Several minor places having been taken, siege was laid to Perpignan: the people of the country were not at all unwilling to pass under the dominion of France; and another serious misfortune threatened the ministry of Olivarez. At this time was concerted the conspiracy of Cinq Mars [see FRANCE: A. D. 1641–1642] . . . and the count-duke eagerly entered into the views of the French malecontents, and promised them every assistance they demanded. The failure of the conspiracy, the arrest and execution of some of the conspirators, and the fall of Perpignan, came rapidly, one upon the other, showing the fortune of Richelieu still triumphing over all the best laid schemes of his adversaries."—G. P. R. James, *Eminent Foreign Statesmen, v.* 2: *Olivarez.*

A. D. 1644-1646.—The war in Catalonia.—Sieges of Lerida.—In 1644, Philip IV., "under the prudent and sagacious counsels of Don Louis de Haro, was directing his principal efforts to the recovery of Catalonia. . . . Don Philip de Sylva, an officer of experience and determination, was put at the head of the Castilian troops, and immediately advanced to the siege of the strong town of Lerida, the king himself being nominally in command of the army. The French troops in Catalonia were at that time commanded by La Mothe Houdancourt, who no sooner heard of the advance of the Spanish troops towards Lerida than he marched with great rapidity to the relief of that place;" but approached the enemy with so much carelessness that he was attacked by Sylva and totally defeated, with a loss of 3,000 men and 12 guns. He then, for a diversion, laid siege to Tarragona, and lost 3,000 more of his men, without accomplishing the reduction of the place; being forced, in the end, to retreat to Barcelona, while Lerida was surrendered to the Spaniards. "La Mothe having been recalled and imprisoned, . . . the Count de Harcourt was withdrawn from Savoy, and put at the head of fresh forces, for the purpose of repairing the disasters of the former general." Harcourt began operations (April, 1645)

by laying siege to the strong fortress of Rosas, or Roses, which commanded the principal entrance to Catalonia from Roussillon. The fortress surrendered the following month, and "the Count de Harcourt, . . . after capturing some places of minor import, passed the Segre, encountered the army of Cantelmo in the neighbourhood of Llorens, and, gaining a complete victory, made himself master of Balaguer." After these successes, the Count de Harcourt was called away from Catalonia for a time, to act against the insurgents at Barcelona, but returned in 1646 and undertook the siege of Lerida. He was now opposed by the Marquis de Leganez, whom he had successfully encountered in Italy, and whom he was foolishly disposed to regard with contempt. While he pressed his siege in careless security, Leganez surprised him, in a night attack, and drove him in utter rout from his lines. "This signal disaster caused the Count de Harcourt to be recalled; and in order to recover all that had been lost in Catalonia, the Prince de Condé was appointed to command in that province, while a considerable part of the army of Flanders was ordered to proceed towards the frontiers of Spain to serve once more under his command." But Condé, too, was to pay the penalty for despising his enemy. He reopened the siege of Lerida with ostentatious gaiety, marching into the trenches with music of violins, on the 14th of May. In little more than a month he marched out again, without music, abandoning the siege, having lost many men and obtained no sign of success.—G. P. R. James, *Life and Times of Louis XIV.*, *v.* 1, *ch.* 3.

A. D. 1648-1652.—Subjugation of Catalonia.—"During the four years which [in France] had been filled with the troubles of the Fronde, Spain endeavored, and with success, to reconquer the province which had abandoned her. In 1650, Mazarin had recognized the peril of Catalonia, and had endeavored to send assistance in war and money. It was possible, however, to do but little. In 1651 the Spanish besieged Barcelona. After Marchin's desertion they hoped to capture it at once, but it was defended with the courage and constancy of the Catalonian people. La Mothe Houdancourt was again put in command of the province. He had been unsuccessful there when France was strong, and it could hardly have been expected that he could rescue it when France was weak. He succeeded, however, in forcing his way into Barcelona, and defended the city with as much success as could, perhaps, have been anticipated from the scanty means at his command. The inhabitants endured, with constancy, the danger and want caused by the siege, rather than surrender themselves to Spain. Some French ships sailed for the rescue of the place, but they acquitted themselves with little valor. Provisions were sent into the town, but the commander claimed he was not in condition for a conflict with the Spanish fleet, and he retreated. Endeavors were made, both by the French troops and those of the Catalonians, to raise the siege, but without success. In October [1652], after a siege of fifteen months, Barcelona surrendered. Roses was captured soon after. Leucate was betrayed to Spain by its governor for 40,000 crowns. He intended to enlist under Orleans, but learning the king had reëntered Paris, he made his peace, by agreeing to betray no more. The Spanish granted an amnesty to the people of Catalonia. The whole province fell into their hands, and became again a part of the kingdom of Spain. The loss of Catalonia was chiefly due to the turbulence and disloyalty of Condé. Had it not been for the groundless rebellion which he excited in the autumn of 1651, and which absorbed the energies of the French armies during the next year, Catalonia might have been saved for France and have remained a part of that kingdom. . . . It was a national misfortune that Catalonia was lost. This great and important province would have been a valuable accession to France. Its brave and hardy population would have become loyal and industrious Frenchmen, and have added to the wealth and power of that kingdom. For the Catalonians it was still more unfortunate that their lot should thus have been determined. They were not closely related to the people of Aragon or Castile. They were now left to share in the slow decay of the Spanish kingdom, instead of having an opportunity for development in intelligence and prosperity as members of a great and progressive nation."—J. B. Perkins, *France under Mazarin*, *ch.* 15 (*v.* 2).

A. D. 1698-1700.—The question of the Succession.—The Treaties of Partition.—The will of Charles II.— As the 17th century approached its close, the king of Spain, Charles II., was nearing the grave. "His days had been few and evil. He had been unfortunate in all his wars, in every part of his internal administration, and in all his domestic relations. . . . He was childless; and his constitution was so completely shattered that, at little more than thirty years of age, he had given up all hopes of posterity. His mind was even more distempered than his body. . . . His sufferings were aggravated by the thought that his own dissolution might not improbably be followed by the dissolution of his empire. Several princes laid claim to the succession. The King's eldest sister had married Lewis XIV. The Dauphin would, therefore, in the common course of inheritance, have succeeded to the crown. But the Infanta had, at the time of her espousals, solemnly renounced, in her own name, and in that of her posterity, all claim to the succession [see FRANCE: A. D. 1659–1661]. This renunciation had been confirmed in due form by the Cortes. A younger sister of the King had been the first wife of Leopold, Emperor of Germany. She too had at her marriage renounced her claims to the Spanish crown, but the Cortes had not sanctioned the renunciation, and it was therefore considered as invalid by the Spanish jurists. The fruit of this marriage was a daughter, who had espoused the Elector of Bavaria. The Electoral Prince of Bavaria inherited her claim to the throne of Spain. The Emperor Leopold was son of a daughter of Philip III., and was therefore first cousin to Charles. No renunciation whatever had been exacted from his mother at the time of her marriage. The question was certainly very complicated. That claim which, according to the ordinary rules of inheritance, was the strongest, had been barred by a contract executed in the most binding form. The claim of the Electoral Prince of Bavaria was weaker. But so also was the contract which bound him not to prosecute his claim. The only party against whom no instrument of renunciation could be produced was the party who, in respect of blood, had the weakest claim of all. As it was clear that great alarm would be excited throughout Europe if either the Emperor or the Dauphin should become King of Spain, each of those Princes offered to waive his pretensions in favour of his second son; the Emperor in favour of the Archduke Charles, the Dauphin in favour of Philip, Duke of Anjou. Soon after the Peace of Ryswick, William III. and Lewis XIV. determined to settle the question of the succession without consulting either Charles or the Emperor. France, England, and Holland, became parties to a treaty [called the First Partition Treaty] by which it was stipulated that the Electoral Prince of Bavaria should succeed to Spain, the Indies, and the Netherlands. The Imperial family were to be bought off with the Milanese, and the Dauphin was to have the Two Sicilies. The great object of the King of Spain and of all his counsellors was to avert the dismemberment of the monarchy. In the hope of attaining this end, Charles determined to name a successor. A will was accordingly framed by which the crown was bequeathed to the Bavarian Prince. Unhappily, this will had scarcely been signed when the Prince died. The question was again unsettled, and presented greater difficulties than before. A new Treaty of Partition was concluded between France, England, and Holland. It was agreed that Spain, the Indies, and the Netherlands, should descend to the Archduke Charles. In return for this great concession made by the Bourbons to a rival house, it was agreed that France should have the Milanese, or an equivalent in a more commodious situation. The equivalent in view was the province of Lorraine. Arbuthnot, some years later, ridiculed the Partition Treaty with exquisite humour and ingenuity. Everybody must remember his description of the paroxysm of rage into which poor old Lord Strutt fell, on hearing that his runaway servant, Nick Frog, his clothier, John Bull, and his old enemy, Lewis Baboon, had come with quadrants, poles, and inkhorns, to survey his estate, and to draw his will for him. . . . When the intelligence of the second Partition Treaty arrived at Madrid, it roused to momentary energy the languishing ruler of a languishing state. The Spanish ambassador at the court of London was directed to remonstrate with the government of William; and his remonstrances were so insolent that he was commanded to leave England. Charles retaliated by dismissing the English and Dutch ambassadors. The French King, though the chief author of the Partition Treaty, succeeded in turning the whole wrath of Charles and of the Spanish people from himself, and in directing it against the two maritime powers. Those powers had now no agent at Madrid. Their perfidious ally was at liberty to carry on his intrigues unchecked; and he fully availed himself of this advantage." He availed himself of the advantage so successfully, in fact, that when the Spanish king died, November 3, 1700, he was found to have left a will, bequeathing the whole Spanish monarchy to Philip, Duke of Anjou, second son of the Dauphin of France. "Lewis acted as the English ministers might have guessed that he would act. With scarcely the show of hesitation, he broke through all the obligations of the Partition Treaty, and accepted for his grandson the splendid legacy of Charles. The new sovereign hastened to take possession of his dominions."—Lord Macaulay, *Mahon's War of the Succession* (*Essays*).

A. D. 1700.—Accession of Philip V.

A. D. 1701-1702.—The Bourbon succession, and the European League against it.—"Louis XIV. having . . . resolved to accede to the will, Philip of Anjou was proclaimed King by the Spaniards, and made his solemn entry into Madrid on the 14th of April 1701. Most of the European powers, such as the States of Italy, Sweden, England, Holland, and the kingdoms of the North, acknowledged Philip V.; the King of

Portugal and the Duke of Savoy even concluded treaties of alliance with him. Moreover, the situation of political affairs in Germany, Hungary, and the North was such that it would have been easy for Louis XIV., with prudent management, to preserve the Spanish crown on the head of his grandson; but he seemed, as if on purpose, to do everything to raise all Europe against him. It was alleged that he aimed at the chimerical project of universal monarchy, and the reunion of France with Spain. Instead of trying to do away this supposition, he gave it additional force, by issuing letters-patent in favour of Philip, at the moment when he was departing for Spain, to the effect of preserving his rights to the throne of France. The Dutch dreaded nothing so much as to see the French making encroachments on the Spanish Netherlands, which they regarded as their natural barrier against France; the preservation of which appeared to be equally interesting to England. It would have been prudent in Louis XIV. to give these maritime powers some security on this point, who, since the elevation of William, Prince of Orange, to the crown of Great Britain, held as it were in their hands the balance of Europe. Without being swayed by this consideration, he obtained authority from the Council of Madrid to introduce a French army into the Spanish Netherlands; and on this occasion the Dutch troops, who were quartered in various places of the Netherlands, according to a stipulation with the late King of Spain, were disarmed. This circumstance became a powerful motive for King William to rouse the States-General against France. He found some difficulty, however, in drawing over the British Parliament to his views, as a great majority in that House were averse to mingle in the quarrels of the Continent; but the death of James II. altered the minds and inclinations of the English. Louis XIV. having formally acknowledged the son of that prince as King of Great Britain, the English Parliament had no longer any hesitation in joining the Dutch and the other enemies of France. A new and powerful league [the Second Grand Alliance] was formed against Louis. The Emperor, England, the United Provinces, the Empire, the Kings of Portugal and Prussia, and the Duke of Savoy, all joined it in succession. The allies engaged to restore to Austria the Spanish Netherlands, the duchy of Milan, the kingdom of the Two Sicilies, with the ports of Tuscany; and never to permit the union of France with Spain."—C. W. Koch, *The Revolutions of Europe, period* 7.

A. D. 1702.—The War of the Succession: Cadiz defended.—The treasure fleet lost in Vigo Bay.—The first approach to Spain of the War of the Succession—already raging for months in Northern Italy and the Spanish Netherlands—was in the form of an expedition against Cadiz, undertaken in the autumn of 1702 by the English and Dutch. "King William was the first to plan this expedition against Cadiz and after his decease the project was resumed. But had King William lived he would certainly not have selected as chief the Duke of Ormond, a princely nobleman, endowed with many amiable qualities, but destitute of the skill and the energy which a great enterprise requires. Under him Sir Henry Bellasys commanded the English and General Spaar a contingent of Dutch troops, amounting together to 14,000 men. Admiral Sir George Rooke had the direction of the fleet. Their proceedings have been related at full length in another history [Lord Mahon's (Earl Stanhope's) 'War of the Succession in Spain'] — how the troops were set on shore near Cadiz in the first days of September — how even before they landed angry dissensions had sprung up between the Dutch and the English, the landsmen and the seamen — and how these dissensions which Ormond wanted the energy to control proved fatal to the enterprise. No discipline was kept, no spirit was displayed. Week after week was lost. . . . Finally at the close of the month it was discovered that nothing could be done, and a council of war decided that the troops should reembark. . . . On their return, and off the coast of Portugal, an opportunity arose to recover in some part their lost fame. The Spanish galleons from America, laden with treasure and making their yearly voyage at this time, were bound by their laws of trade to unload at Cadiz, but in apprehension of the English fleet they had put into Vigo Bay. There Ormond determined to pursue them. On the 22nd of October he neared that narrow inlet which winds amidst the high Gallician mountains. The Spaniards, assisted by some French frigates, which were the escort of the galleons, had expected an attack and made the best preparations in their power. They durst not disembark the treasure without an express order from Madrid — and what order from Madrid ever yet came in due time? — but they had called the neighbouring peasantry to arms; they had manned their forts; they had anchored their ships in line within the harbour; and they had drawn a heavy boom across its mouth. None of these means availed them. The English seamen broke through the boom; Ormond at the head of 2,000 soldiers scaled the forts; and the ships were all either taken or destroyed. The greater part of the treasure was thrown overboard by direction of the French and Spanish chiefs; but there remained enough to yield a large amount of booty to the victors."—Earl Stanhope, *Hist. of Eng.: Reign of Queen Anne, ch.* 2.

A. D. 1703-1704.—The War of the Succession: Charles III. claims the kingdom.—The English take Gibraltar.—"The Admiral of Castile, alienated from the cause of Philip V. by having been dismissed from his office of Master of the Horse, had retired into Portugal; and he succeeded in persuading King Pedro II. to accede to the Grand Alliance, who was enticed by the promise of the American provinces between the Rio de la Plata and Brazil, as well as a part of Estremadura and Galicia (May 6th). Pedro also entered into a perpetual defensive league with Great Britain and the States-General. In the following December, Paul Methuen, the English minister at Lisbon, concluded the celebrated commercial treaty between England and

Portugal named after himself [see PORTUGAL: A. D. 1703]. It is the most laconic treaty on record, containing only two Articles, to the effect that Portugal was to admit British cloths, and England to admit Portuguese wines, at one-third less duty than those of France. Don Pedro's accession to the Grand Alliance entirely changed the plans of the allies. Instead of confining themselves to the procuring of a reasonable indemnity for the Emperor, they now resolved to drive Philip V. from the throne of Spain, and to place an Austrian Archduke upon it in his stead. The Emperor and his eldest son Joseph formally renounced their claims to the throne of Spain in favour of the archduke Charles, Leopold's second son, September 12th [1703]; and the Archduke was proclaimed King of Spain, with the title of Charles III. The new King was to proceed into Portugal, and, with the assistance of Don Pedro, endeavour to obtain possession of Spain. Charles accordingly proceeded to Holland, and embarked for England in January 1704; whence, after paying a visit to Queen Anne at Windsor, he finally set sail for Lisbon, February 17th. . . . In March 1704, the Pretender, Charles III., together with an English and Dutch army of 12,000 men, landed in Portugal, with the intention of entering Spain on that side; but so far were they from accomplishing this plan that the Spaniards, on the contrary, under the Duke of Berwick, penetrated into Portugal, and even threatened Lisbon, but were driven back by the Marquis das Minas. An English fleet under Admiral Rooke, with troops under the Prince of Darmstadt, made an ineffectual attempt on Barcelona; but were compensated for their failure by the capture of Gibraltar on their return. The importance of this fortress, the key of the Mediterranean, was not then sufficiently esteemed, and its garrison had been neglected by the Spanish Government. A party of English sailors, taking advantage of a Saint's day, on which the eastern portion of the fortress had been left unguarded, scaled the almost inaccessible precipice, whilst at the same time another party stormed the South Mole Head. The capture of this important fortress was the work of a few hours (August 4th). Darmstadt would have claimed the place for King Charles III., but Rooke took possession of it in the name of the Queen of England. . . . The Spaniards, sensible of the importance of Gibraltar, speedily made an effort to recover that fortress, and as early as October 1704, it was invested by the Marquis of Villadarias with an army of 8,000 men. The French Court afterwards sent Marshal Tessé to supersede Villadarias, and the siege continued till April 1705; but the brave defence of the Prince of Darmstadt, and the defeat of the French blockading squadron under Pointis by Admiral Leake, finally compelled the raising of the siege."—T. H. Dyer, *Hist. of Modern Europe, bk.* 5, *ch.* 6 (*v.* 3).

A. D. 1704.—The War of the Succession: Blenheim. See GERMANY: A. D. 1704.

A. D. 1705.—The War of the Succession: The capture of Barcelona.—"As if to exhibit, upon a different theatre of the same great warfare, the most remarkable contrast to the patience, the caution, and the foresight of Marlborough, . . . Charles Mordaunt, earl of Peterborough, took the command of an expedition to Spain. Macaulay calls Peterborough 'the most extraordinary character of that age, the king of Sweden himself not excepted, . . . a polite, learned and amorous Charles XII.' He sailed from Portsmouth in June, 1705, having the command of 5,000 men; unlimited authority over the land forces, and a divided command with sir Cloudesley Shovel at sea. At Lisbon, Peterborough was reinforced, and he here took on board the arch-duke Charles, and a numerous suite. At Gibraltar he received two veteran battalions, in exchange for the same number of recruits which he had brought from England. The prince of Darmstadt also here joined Peterborough. The prince and the arch-duke desired to besiege Barcelona. Peterborough opposed the scheme of attempting, with 7,000 men, the reduction of a place which required 30,000 men for a regular siege. With the squadron under sir Cloudesley Shovel, the fleet sailed from Gibraltar. A landing was effected near Valencia; and here the people were found favourable to the cause of the Austrian prince, who was proclaimed, upon the surrender of the castle of Denia, as Charles III., king of Spain and the Indies. Peterborough, encouraged by this reception, conceived the enterprise of dashing upon the capital, whilst all the Spanish forces were on the frontiers of Portugal, or in Catalonia; and king Philip was at Madrid with few troops Such an exploit had every chance of success, but Peterborough was overruled by a council of war. The troops were landed before Barcelona on the 27th of August. In three weeks there was nothing but dissensions amongst the great men of this expedition. The prince of Darmstadt and the earl of Peterborough had come to an open rupture. The Dutch officers said their troops should not join in an enterprise so manifestly impossible of success for a small force. Peterborough conceived a plan of attack totally opposed to all the routine modes of warfare. The citadel of Montjouich, built on the summit of a ridge of hills skirting the sea, commanded the town. Peterborough gave notice that he should raise the siege; sent his heavy artillery on board the ships; and made every preparation for embarking the troops. With 1,200 foot soldiers, and 200 horse, he marched out of the camp on the evening of the 13th of September, accompanied by the prince of Darmstadt, whom he had invited to join him. They marched all night by the side of the mountains; and before daybreak were under the hill of Montjouich, and close to the outer works. Peterborough told his officers that when they were discovered at daylight, the enemy would descend into the outer ditch to repel them, and that then was the time to receive their fire, leap in upon them, drive them into the outer works, and gain the fortress by following them close. The scheme succeeded, and the English were soon masters of the bastion. . . . The citadel held out for several days, but was finally reduced by a bombardment from the hills, the cannon having been relanded from the ships. The reduction of Montjouich by this extraordinary act of daring, was very soon followed by the surrender of Barcelona. . . . The possession of Barcelona, in which king Charles III. was proclaimed with great solemnity, was followed by the adhesion to his cause of the chief towns

of Catalonia. Peterborough was for following up his wonderful success by other daring operations. The German ministers and the Dutch officers opposed all his projects." He was able, notwithstanding, to raise the siege of San Mateo and to save Valencia from a threatened siege. "It was soon found that king Charles was incompetent to follow up the successes which Peterborough had accomplished for him."—C. Knight, *Crown Hist. of Eng., ch.* 38.—The above is substantially, in brief, the account of Peterborough's campaigns given by Mahon, Macaulay, and most of the later historians of the War of the Succession, who drew the narrative largely from a little book published in 1728, called the "Military Memoirs of Captain George Carleton." The story has been recently told, however, in a very different way and to a very different effect, by Colonel Arthur Parnell, who declines to accept the Carleton Memoirs as authentic history. Those Memoirs have been judged by some critics, indeed, to be a pure work of fiction and attributed to De Foe. They are included, in fact, in several editions of De Foe's works. Colonel Parnell, who seems to have investigated the matter thoroughly, recognizes Captain Carleton as a real personality, and concludes that he may have furnished some kind of a note-book or diary that was the substratum of these alleged Memoirs; but that somebody (he suspects Dean Swift), in the interest of Peterborough, built up on that groundwork a fabric of fiction which has most wrongfully become accepted history. According to Colonel Parnell, it was not Peterborough, but Prince George of Hesse Darmstadt (killed in the assault on Montjouich) and De Ruvigny, Earl of Galway, who were entitled to the credit of the successes for which Peterborough has been laurelled. "In order to extol a contemptible impostor, the memory of this great Huguenot general [Ruvigny] has been aspersed by Lord Macaulay and most English writers of the present century."—Col. A. Parnell, *The War of the Succession in Spain, pref.; ch.* 12–18; *and app. C.*

A. D. 1706.—The War of the Succession: Rapid changing of kings and courts at Madrid.—"The Courts of Madrid and Versailles, exasperated and alarmed by the fall of Barcelona, and by the revolt of the surrounding country, determined to make a great effort. A large army, nominally commanded by Philip, but really under the orders of Marshal Tessé, entered Catalonia. A fleet under the Count of Toulouse, one of the natural children of Lewis XIV., appeared before the port of Barcelona. The city was attacked at once by sea and land. The person of the Archduke was in considerable danger. Peterborough, at the head of about 3,000 men, marched with great rapidity from Valencia. To give battle, with so small a force, to a great regular army under the conduct of a Marshal of France, would have been madness. . . . His commission from the British government gave him supreme power, not only over the army, but, whenever he should be actually on board, over the navy also. He put out to sea at night in an open boat, without communicating his design to any person. He was picked up, several leagues from the shore, by one of the ships of the English squadron. As soon as he was on board, he announced himself as first in command, and sent a pinnace with his orders to the Admiral. Had these orders been given a few hours earlier, it is probable that the whole French fleet would have been taken. As it was, the Count of Toulouse put out to sea. The port was open. The town was relieved. On the following night the enemy raised the siege and retreated to Roussillon. Peterborough returned to Valencia, a place which he preferred to every other in Spain; and Philip, who had been some weeks absent from his wife, could endure the misery of separation no longer, and flew to rejoin her at Madrid. At Madrid, however, it was impossible for him or for her to remain. The splendid success which Peterborough had obtained on the eastern coast of the Peninsula had inspired the sluggish Galway with emulation. He advanced into the heart of Spain. Berwick retreated. Alcantara, Ciuadad Rodrigo, and Salamanca fell, and the conquerors marched towards the capital. Philip was earnestly pressed by his advisers to remove the seat of government to Burgos. . . . In the mean time the invaders had entered Madrid in triumph, and had proclaimed the Archduke in the streets of the imperial city. Arragon, ever jealous of the Castilian ascendency, followed the example of Catalonia. Saragossa revolted without seeing an enemy. The governor whom Philip had set over Carthagena betrayed his trust, and surrendered to the Allies the best arsenal and the last ships which Spain possessed. . . . It seemed that the struggle had terminated in favour of the Archduke, and that nothing remained for Philip but a prompt flight into the dominions of his grandfather. So judged those who were ignorant of the character and habits of the Spanish people. There is no country in Europe which it is so easy to overrun as Spain; there is no country in Europe which it is more difficult to conquer. Nothing can be more contemptible than the regular military resistance which Spain offers to an invader; nothing more formidable than the energy which she puts forth when her regular military resistance has been beaten down. Her armies have long borne too much resemblance to mobs; but her mobs have had, in an unusual degree, the spirit of armies. . . . Castile, Leon, Andalusia, Estremadura, rose at once; every peasant procured a firelock or a pike; the Allies were masters only of the ground on which they trod. No soldier could wander a hundred yards from the main body of the invading army without imminent risk of being poinarded; the country through which the conquerors had passed to Madrid, and which, as they thought, they had subdued, was all in arms behind them. Their communications with Portugal were cut off. In the mean time, money began, for the first time, to flow rapidly into the treasury of the fugitive king. . . . While the Castilians were everywhere arming in the cause of Philip, the Allies were serving that cause as effectually by their mismanagement. Galway staid at Madrid, where his soldiers indulged in such boundless licentiousness that one half of them were in the hospitals. Charles remained dawdling in Catalonia. Peterborough had taken Requena, and wished to march from Valencia towards Madrid, and to effect a junction with Galway; but the Archduke refused his consent to the plan. The indignant general remained accordingly in his favourite city, on the beauti-

ful shores of the Mediterranean, reading Don Quixote, giving balls and suppers, trying in vain to get some good sport out of the Valencian bulls, and making love, not in vain, to the Valencian women. At length the Archduke advanced into Castile, and ordered Peterborough to join him. But it was too late. Berwick had already compelled Galway to evacuate Madrid; and, when the whole force of the Allies was collected at Quadalaxara, it was found to be decidedly inferior in numbers to that of the enemy. Peterborough formed a plan for regaining possession of the capital. His plan was rejected by Charles. The patience of the sensitive and vainglorious hero was worn out. He had none of that serenity of temper which enabled Marlborough to act in perfect harmony with Eugene, and to endure the vexatious interference of the Dutch deputies. He demanded permission to leave the army, Permission was readily granted; and he set out for Italy. . . . From that moment to the end of the campaign, the tide of fortune ran strong against the Austrian cause. Berwick had placed his army between the Allies and the frontiers of Portugal. They retreated on Valencia, and arrived in that province, leaving about 10,000 prisoners in the hands of the enemy."—Lord Macaulay, *Mahon's War of the Succession* (*Essays*).—In the Netherlands the Allies won the important victory of Ramillies, and in Italy, Prince Eugene inflicted a sore defeat on the French and rescued Turin.—See NETHERLANDS: A. D. 1706–1707; and ITALY: A. D. 1701–1713.

ALSO IN: C. T. Wilson, *The Duke of Berwick, ch.* 5-6.—W. Coxe, *Memoirs of the Bourbon Kings of Spain, ch.* 14 (*v.* 1).

A. D. 1707.—The War of the Succession: The fortunes of the Bourbons retrieved at Almanza.—"The enemy [the Allies] began to move again in February. After some weeks of manœuvring on the confines of the kingdom of Valencia and of New Castile, April 25, Galway and Las Minas, wishing to anticipate the arrival of a reinforcement expected from France, attacked Berwick at Almanza. Singularly enough, the English were commanded by a French refugee (Ruvigni, Earl of Galway), and the French by a royal bastard of England [the Duke of Berwick, natural son of James II.]. The enemy numbered, it is said, 26,000 foot and 7,000 horse; the Franco-Castilians were somewhat inferior in infantry, somewhat superior in cavalry and artillery." The battle, decided by the cavalry, was disastrous to the Allies. "The English, Dutch and Portuguese infantry were cut to pieces: the Portuguese foot showed a courage less fortunate, but not less intrepid, than the Spanish cavalry. Another corps had fought with still greater fury, —the French refugees, commanded by Jean Cavalier, the renowned Camisard chieftain. They had engaged a French regiment, and the two corps had almost destroyed each other. Six battalions were surrounded and taken in a body. Thirteen other battalions, five English, five Dutch, and three Portuguese, retired, at evening, to a wooded hill; seeing themselves cut off from the mountains of Valencia, they surrendered themselves prisoners the next morning. Hochstadt [Blenheim] was fully avenged. Five thousand dead, nearly 10,000 prisoners, 24 cannon, 120 flags or standards, were purchased on the part of the conquerors by the loss of only about 2,000 men. Many Frenchmen, taken at Hochstadt or at Ramillies, and enrolled by force in the ranks of the enemies, were delivered by the victory. The Duke of Orleans reached the army the next day. . . . He marched with Berwick on Valencia, which surrendered, May 8, without striking a blow. The generals of the enemies, both wounded, retired with the wrecks of their armies towards the mouths of the Ebro. The whole kingdom of Valencia submitted, with the exception of three or four places. Berwick followed the enemy towards the mouth of the Ebro, whilst Orleans returned to meet a French corps that was coming by the way of Navarre, and with this corps entered Aragon. Nearly all Aragon yielded without resistance. Berwick joined Orleans by ascending the Ebro; they moved together on the Segre and began the blockade of Lerida, the bulwark of Catalonia." Lerida was taken by storm on the 12th of October, and "pillaged with immense booty. . . . The castle of Lerida surrendered, November 11. A great part of the Catalan mountaineers laid down their arms. . . . Fortune had favored the Franco-Castilians on the Portuguese frontier as in the States of Aragon; Ciudad-Rodrigo had been taken by assault, October 4, with the loss of more than 3,000 men on the side of the enemy. The news of Almanza had everywhere reanimated the hearts of the French armies."—H. Martin, *Hist. of France: Age of Louis XIV.* (*tr. by M. L. Booth*), *v.* 2, *ch.* 5.

ALSO IN: Col. A. Parnell, *The War of the Succession in Spain, ch.* 23-26.—C. T. Wilson, *The Duke of Berwick, ch.* 7.

A. D. 1707-1710.—The War of the Succession: Bourbon reverses and final triumph.—"In less than a month after the victory of Almanza, the Bourbon troops had recovered all Arragon, with Valencia and Murcia, excepting the ports of Denia and Alicant; but the war still continued in Catalonia, where General Stanhope now filled the double office of ambassador to Charles and general of the English forces, and prince Staremberg was sent by the emperor Joseph to take the command of the Austrian troops. The Spanish government was reduced to still greater pecuniary distress than it had suffered before, by the success of the English squadron off Carthagena, under the command of Sir Charles Wager, which took three of the great galleons and dispersed fourteen, which were expected to furnish an unusual supply of the precious metals from America. After a short siege of Port Mahon, General Stanhope took possession of Minorca and Majorca [A. D. 1708]; the count of Cifuentes gained Sardinia; and all the efforts, spirit, and talents of the duke of Orleans were insufficient to make the slightest impression in Catalonia. He consequently complained, in his letters to Versailles, that his operations were thwarted or retarded by the intrigues of the Princess Orsini and the ambassador Amelot. He was accused in return, and that not without reason, of forming designs on the crown of Spain, and corresponding with the enemies of Philip on the subject. The fortunes of France and Spain still continued to decline, and Louis felt that peace was the only measure which could stop the progress of that ruin which menaced the house of Bourbon. Conferences were accordingly opened at the Hague, and Louis pretended that he was willing to give up the interest of Philip; at the same time his

grandson himself protested that he would never quit Spain, or yield his title to its crown. . . . The disastrous campaign of 1710 rendered Louis more desirous than ever of obtaining peace, and though his professions of abandoning his grandson were insincere, he certainly would not have scrupled to sacrifice the Spanish Netherlands and the American commerce to Holland, as the price of an advantageous peace to France. Meantime the Austrians had gained the victories of Almenara and Zaragoza, and had once more driven the Spanish court from Madrid. This time it fled to Valladolid, and the king and queen talked of taking refuge in America, and re-establishing the empire of Mexico or Peru, rather than abandon their throne. But the Castilians once more roused themselves to defend the king; the duke of Vendome's arrival supplied their greatest want, that of a skilful general; and the imprudence of the allies facilitated the recovery of the capital. The disasters of the allies began with their retreat; Staremburg, after a doubtful though bloody battle [Villa Viciosa, December 10, 1710], at the end of which he was victor, was yet obliged to retire with the disadvantages of defeat; and Stanhope, with a small body of English, after a desperate resistance [at Brihuega, December 9, 1710], was taken prisoner."—M. Callcott, *Short Hist. of Spain, ch.* 22 (*v.* 2).—"As the result of the actions at Brihuega and Villa Viciosa and the subsequent retreat, the Austrians lost 3,600 killed or wounded, and 3,936 prisoners, or a total of 7,536 men; whilst the Bourbon casualties were 6,700 placed hors-de-combat, and 100 captured, or in all 6,800 men. These operations constituted a decisive victory for Vendôme, who thus, in less than four months after the battle of Saragossa, had re-established King Philip and the Bourbon cause."—Col. A. Parnell, *The War of the Succession in Spain, ch.* 27–34.

Also in: W. Coxe, *Memoirs of the Bourbon Kings of Spain, ch.* 15–18 (*v.* 1–2).—Lord Mahon (Earl Stanhope), *Hist. of the War of Succession in Spain, ch.* 6–8.

A. D. 1711.—The Austrian claimant of the throne becomes Emperor. See Austria: A. D. 1711.

A. D. 1713-1714.—The betrayal of the Catalans.—"Alone among the Spaniards the Catalans had real reason to regret the peace. They had clung to the cause of Charles with a desperate fidelity, and the Peace of Utrecht rang the death-knell of provincial liberties to which they were passionately attached. From the beginning of 1705 they had been the steady and faithful allies of England; they had again and again done eminent service in her cause; they had again and again received from her ministers and generals the most solemn assurances that they would never be abandoned. When England first opened a separate negotiation for peace she might easily have secured the Catalonian liberties by making their recognition an indispensable preliminary of peace; but, instead of this, the English ministers began by recognising the title of Philip, and contented themselves with a simple prayer that a general amnesty might be granted. When the convention was signed for the evacuation of Catalonia by the Imperial troops, the question of the provincial liberties was referred to the definite peace, the Queen and the French King promising at that time to interpose their good offices to secure them. The Emperor, who was bound to the Catalans by the strongest ties of gratitude and honour, could have easily obtained a guarantee of their fueros at the price of an acknowledgment of the title of Philip; but he was too proud and too selfish for such a sacrifice. The English, it is true, repeatedly urged the Spanish King to guarantee these privileges, . . . but these were mere representations, supported by no action, and were therefore peremptorily refused. The English peace with Spain contained a clause granting the Catalans a general armistice, and also a promise that they should be placed in the same position as the Castilians, which gave them the right of holding employments and carrying on a direct trade with the West Indies, but it made no mention of their provincial privileges. The Peace of Rastadt was equally silent, for the dignity of the Emperor would not suffer him to enter into any negotiations with Philip. The unhappy people, abandoned by those whom they had so faithfully served, refused to accept the position offered them by treaty, and, much to the indignation of the English Government, they still continued in arms, struggling with a desperate courage against overwhelming odds. The King of Spain then called upon the Queen, as a guarantee of the treaty of evacuation, 'to order a squadron of her ships to reduce his subjects to their obedience, and thereby complete the tranquillity of Spain and of the Mediterranean commerce.' A fleet was actually despatched, which would probably have been employed against Barcelona, but for an urgent address of the House of Lords, and the whole moral weight of England was thrown into the scale against the insurgents. The conduct of the French was more decided. Though the French King had engaged himself with the Queen by the treaty of evacuation to use his good offices in the most effectual manner in favour of the Catalan liberties, he now sent an army to hasten the capture of Barcelona. The blockade of that noble city lasted for more than a year. The insurgents hung up over the high altar the Queen's solemn declaration to protect them. They continued the hopeless struggle till 14,000 bombs had been thrown into the city; till a great part of it had been reduced to ashes; till seven breaches had been made; till 10,000 of the besieging army had been killed or wounded; and till famine had been added to the horrors of war. At last, on September 11, 1714, Barcelona was taken by storm. A frightful massacre took place in the streets. Many of the inhabitants were afterwards imprisoned or transported, and the old privileges of Catalonia were finally abolished. Such was the last scene of this disastrous war."—W. E. H. Lecky, *Hist. of Eng.*, 18*th century, ch.* 1 (*v.* 1).

A. D. 1713-1725.—Continued war with the Emperor.—The Triple Alliance.—The Quadruple Alliance.—The Peace of Vienna.—The Alliance of Hanover.—"The treaty of Utrecht, although it had tranquilized a great part of Europe, was nevertheless defective, in as far as it had not reconciled the Emperor and the King of Spain, the two principal claimants to the Spanish succession. The Emperor Charles VI. did not recognize Philip V. in his quality of

King of Spain; and Philip, in his turn [instigated by his queen, Elizabeth Farnese—see ITALY: A. D. 1715–1735] refused to acquiesce in those partitions of the Spanish monarchy which the treaty of Utrecht had stipulated in favour of the Emperor. To defeat the projects and secret intrigues of the Spanish minister [Cardinal Alberoni], the Duke of Orleans [Regent of France], thought of courting an alliance with England, as being the power most particularly interested in maintaining the treaty of Utrecht, the fundamental articles of which had been dictated by herself. That alliance, into which the United Provinces also entered, was concluded at the Hague (January 4th, 1717). . . . Cardinal Alberoni, without being in the least disconcerted by the Triple Alliance, persisted in his design of recommencing the war. No sooner had he recruited the Spanish forces, and equipped an expedition, than he attacked Sardinia [1717], which he took from the Emperor. This conquest was followed by that of Sicily, which the Spaniards took from the Duke of Savoy (1718). France and England, indignant at the infraction of a treaty which they regarded as their own work, immediately concluded with the Emperor, at London (August 2nd, 1718) the famous Quadruple Alliance, which contained the plan of a treaty of peace, to be made between the Emperor, the King of Spain, and the Duke of Savoy. The allied powers engaged to obtain the consent of the parties interested in this proposal, and, in case of refusal, to compel them by force of arms. The Emperor was to renounce his right to the Spanish crown, and to acknowledge Philip V. as the legitimate King of Spain, in consideration of that prince renouncing the provinces of Italy and the Netherlands, which the treaty of Utrecht and the quadruple alliance adjudged to the Emperor. The Duke of Savoy was to cede Sicily to Austria, receiving Sardinia in exchange, which the King of Spain was to disclaim. The right of reversion to the crown of Spain was transferred from Sicily to Sardinia. That treaty likewise granted to Don Carlos, eldest son of Philip V., by his second marriage, the eventual reversion and investiture of the duchies of Parma and Placentia, as well as the grand duchy of Tuscany, on condition of holding them as fiefs-male of the Emperor and the Empire after the decease of the last male issue of the families of Farnese and Medici, who were then in possession. . . . The Duke of Savoy did not hesitate to subscribe the conditions of the quadruple alliance; but it was otherwise with the King of Spain, who persisted in his refusal; when France and England declared war against him. The French invaded the provinces of Guipuscoa and Catalonia [under Berwick, A. D. 1719], while the English seized Gallicia and the port of Vigo. These vigorous proceedings shook the resolutions of the King of Spain. He signed the quadruple alliance, and banished the Cardinal Alberoni from his court, the adviser of those measures of which the allies complained. The Spanish troops then evacuated Sicily and Sardinia, when the Emperor took possession of the former and Victor Amadeus, Duke of Savoy, of the latter. The war to all appearance was at an end." But fresh difficulties arose, one following another. The reversion of Tuscany, Parma, and Placentia, promised to the Infant of Spain, was stoutly opposed in Italy. The Emperor provoked commercial jealousies in England and Holland by chartering a Company of Ostend (1722) with exclusive privileges of trading to the East and West Indies and the coasts of Africa. An attempted congress at Cambrai was long retarded and finally broken up. Meantime the French court gave mortal offense to the King of Spain by sending home his daughter, who had been the intended bride of the young King Louis XV., and marrying the latter to a Polish princess. The final result was to draw the Emperor and the King of Spain—the two original enemies in the embroilment—together, and a treaty between them was concluded at Vienna, April 30, 1725. "This treaty renewed the renunciation of Philip V. to the provinces of Italy and the Netherlands, as well as that of the Emperor to Spain and the Indies. The eventual investiture of the duchies of Parma and Placentia, and that of the grand duchy of Tuscany, were also confirmed. The only new clause contained in the treaty was that by which the King of Spain undertook to guarantee the famous Pragmatic Sanction of Charles VI., which secured to the daughter of that prince the succession of all his estates. It was chiefly on this account that Philip V. became reconciled to the court of Vienna. The peace of Vienna was accompanied by a defensive alliance between the Emperor and the King of Spain." The terms of the alliance were such as to alarm England for the security of her hold on Gibraltar and Minorca, and Holland for her commerce, besides giving uneasiness to France. By the action of the latter, a league was set on foot "capable of counteracting that of Vienna, which was concluded at Herrenhausen, near Hanover, (September 3, 1725) and is known by the name of the Alliance of Hanover. All Europe was divided between these two alliances."—C. W. Koch, *The Revolutions of Europe, period* 8.

A. D. 1726-1731.—Fresh quarrels with England.—Siege of Gibraltar.—Treaty of Seville.—Second Treaty of Vienna.—Acquisition of the Italian Duchies.—"All Europe became divided between the alliances of Vienna and Hanover; and though both sides pretended that these treaties were only defensive, yet each made extensive preparations for war. George I. entered into a treaty with the Landgrave of Hesse Cassel for the supply of 12,000 men; manifests were published, ambassadors withdrawn, armies put on foot; the sea was covered with English fleets; an English squadron under Admiral Hosier annoyed the trade of Spain; and in Feb. 1727, the Spaniards laid siege to Gibraltar, and seized at Vera Cruz a richly laden merchant vessel belonging to the English South Sea Company. But all these vast preparations led to no results of importance. Of all the European Powers, Spain alone had any real desire for war. . . . The pre-

liminaries of a general pacification were signed at Paris, May 31st 1727, by the ministers of the Emperor, France, Great Britain, and Holland, and a Congress was appointed to assemble at Aix-la-Chapelle to arrange a definitive peace. But Spain still held aloof and sought every opportunity to temporise. The hopes of Philip being again awakened by the death of George I. in July 1727, he renewed his intrigues with the Jacobites, and instigated the Pretender to proceed to a port in the Low Countries, and to seize an opportunity to pass over into England. But these unfounded expectations were soon dispelled by the quiet accession of George II. to the throne and policy of his father. . . . The Spanish Queen [Elizabeth Farnese], however, still held out; till, alarmed by the dangerous state of Philip's health, whose death might frustrate her favourite scheme of obtaining the Italian duchies, and leave her a mere cypher without any political influence, she induced her husband to accept the preliminaries by the Act of the Pardo, March 6th 1728. A congress was now opened at Soissons, to which place it had been transferred for the convenience of Fleury [French minister], who was bishop of that diocese. But though little remained to be arranged except the satisfaction of Spain in the matter of the Italian duchies, the negociations were tedious and protracted." In the end they "became a mere farce, and the various plenipotentiaries gradually withdrew from the Congress. Meanwhile the birth of a Dauphin (Sept. 4th 1729) having dissipated the hopes of Philip V. and his Queen as to the French succession, Elizabeth devoted herself all the more warmly to the prosecution of her Italian schemes; and finding all her efforts to separate France and England unavailing, she at length determined to accept what they offered. . . . She persuaded Philip to enter into a separate treaty with France and England, which was concluded at Seville, Nov. 9th 1729. England and Spain arranged their commercial and other differences; the succession of Don Carlos to the Italian duchies was guaranteed; and it was agreed that Leghorn, Porto Ferrajo, Parma, and Piacenza should be garrisoned by 6,000 Spaniards, who, however, were not to interfere with the civil government. Nothing more was said about Gibraltar. Philip, indeed, seemed now to have abandoned all hope of recovering that fortress; for he soon afterwards caused it to be constructed across the isthmus the strong lines of San Roque, and thus completely isolated Gibraltar from his Spanish dominions. The Dutch acceded to the Treaty of Seville shortly after its execution, on the understanding that they should receive entire satisfaction respecting the Ostend Company established by the Emperor at Ostend. Charles VI. was indignant at being thus treated by Spain. . . . On the death of Antonio Farnese, Duke of Parma, January 10th 1731, he took military possession of that state. . . . The versatility of the cabinets of that age, however, enabled the Emperor to attain his favourite object at a moment when he least expected it. The Queen of Spain, wearied with the slowness of Cardinal Fleury in carrying out the provisions of the Treaty of Seville, suddenly declared, in a fit of passion, that Spain was no longer bound by that treaty (January 1731). Great Britain and the Dutch States, in concert with the Spanish Court, without the concurrence of France, now entered into negociations with the Emperor, which were finally concluded by Lord Waldegrave [illegible] accede to the Treaty of Seville and, in March 1731, was concluded what had been called the Second Treaty of Vienna, between Great Britain and the States guaranteeing the Pragmatic Sanction, and the Emperor, on his part, agreed to the provisions of Seville respecting the Italian Duchies, and agreed to [illegible] the commerce of the Austrian Netherlands with the Indies by abolishing the obnoxious Ostend Company. He also engaged not to bestow [illegible] on a Bourbon prince, or in any [illegible] that might endanger the balance of power in Europe. In the following November an English squadron disembarked at Leghorn 4,000 Spaniards, who took possession of that place as well as Porto Ferrajo, Parma, and Piacenza, in the name of Don Carlos, as Duke of Parma and presumptive heir of Tuscany."—T. A. D. 1788-1808.—Accession of Charles IV. —The Queen, Marie Louise, and Manuel Godoy.—Corruption and degradation of the Court. — Causes of French contempt. — "Charles III. had just died when the French Revolution commenced. He was the best sovereign that Spain had had in a long time; he left good ministers: Aranda, Campomanès, Florida Blanca; but it was not given to them to continue his work. This reparative reign was followed by one the most disintegrating. Spain, elevated anew for an instant by an intelligent prince, was, in a few years, under the government of an imbecile one, to founder in an ignoble intrigue. The web of this latter was begun immediately upon the accession of the new king. Charles IV. was forty years old; corpulent and weak-minded, simple and choleric, incapable of believing evil because he was incapable of conceiving it: amorous, chaste, devout, and consequently the slave of his wife even more than of his temperament, the first years of his marriage blinded him for his entire life. Scrupulous to the point of separating himself from the queen when he no longer hoped to have children by her, he took refuge in the chase, manual labor, violent exercise, caring only for the table, music and bull fights, exhausted when he had followed his trade of king for half an hour. Small and without beauty, dark of complexion, but with some grace, with elegance and above all carriage, Marie Louise of Parma was at once superstitious and passionate, ignorant, uneasy, with a very frivolous soul as a foundation, with obstinacy without firmness, with artifice without intelligence, with intrigue leading to no result, more covetousness than ambition, much emptiness of mind, still more of heart. Her husband seemed to her coarse and brutish; she despised him. She detested her eldest son and cared moderately for her other children. She was thirty-four years old, of perturbed imagination, of uneasy senses, without any curb of religion or virtue, when she ascended the throne and the fortune of Godoy threw him in her way. He was a small provincial gentleman; for lack of something better, he had entered the life-guards at seventeen. He was then twenty-one. He was very handsome, with a grave beauty frequent in the men of the south, which gives to youth that air of restrained and imperious passion, to mature age that impenetrable and imposing exterior so well calculated to conceal mediocrity of mind, barrenness of heart, despotic selfishness, and all the artifices of a corruption the more insinuating because it seems to be unaware of itself. The queen fell in love with him, and abandoned herself wildly; he took advantage of it without shame. She was not satisfied to make of Godoy her lover, she desired to make a great man of him, a minister, to make him a partner in her power. She introduced him to the court and into the intimacy of the royal household, where Charles IV. tractably became infatuated with him. Marie Louise had at first some circumspection in the gradation of the honors which she lavished upon him, and which marked, by so many scandals, the progress of her passion; but she was very soon entirely possessed by it. Godoy obtained over her an ascendancy equal to that which she arrogated to herself over Charles IV. Thus on the eve of the French Revolution, these three persons, so strangely associated, began, in court costume, and under the austere decorum of the palace of Philip II., that comedy, as old as vice and stupidity, of the compliant husband duped by his wife and of the old mistress exploited by her lover. At the beginning of the reign, Charles IV. from scruple, the queen from hypocrisy, Godoy from policy, became devout. The queen wished power for Godoy, and Godoy wished it for lucre. It was necessary to set aside the old counsellors of Charles III. They were philosophers, the nation had remained catholic. Marie Louise and Godoy relied on the old Spanish fanaticism. The ministers very soon lost influence, and after having secluded them for some time, the queen disgraced them. A complete reaction took place in Spain. The church regained its empire; the Inquisition was re-established. It would appear then that the Revolution must necessarily have found Spain hostile; a Bourbon king and a devout government could but detest it. But before being a Bourbon the king was a husband, and Marie Louise was devout only to mask her intrigues. The same passions led her to desire by turns, war to make her lover illustrious and peace to render him popular. This debilitated and corrupt court found itself given over in advance to all the suggestions of fear, to all the temptations of avidity. Those who had to treat with it did not fail to profit by its feebleness to dominate it. We see it successively linked to England, then to France; treat the Revolution with consideration, condemn it with violence, combat it without vigor; seek an alliance with the Directory, and abandon itself to Napoleon who annihilated it. France found at Madrid only too much docility to her designs; the illusions that she conceived from it became more fatal for her than were for Spain the incapacity and turpitude of its rulers. The French were led by the habits and traditions of the 'ancien régime' to treat the Spaniards as a subordinate nation consigned to the rôle of auxiliary. Holding the court of Spain as cowardly and venal, the politicians of Paris neglected to take account of the Spanish people. They judged them to be divisible and governable at mercy. It was not that they despised them nor that they intended to reduce them to servitude as a conquered people; but they thought that the last Austrian kings had enervated and enfeebled them, that they had been uplifted from this decadence only by the Bourbons, that that dynasty was degenerating in its turn; that another foreign government, more intelligent, more enlightened, more resolute, alone could take up again the work of reparation and bring it to a successful result by means of rigorous treatment and appropriate applications. What Louis XIV. had undertaken solely in the interest of despotism, France, herself regenerated by the Revolution, had the right and the power to accomplish, for the highest

good of Spain and of humanity. These calculations in which the essential element, that is to say the Spanish character, was suppressed, deceived the Convention, led the Directory astray, and ended by drawing Napoleon into the most fatal of his enterprises."—A. A. D. 1807-1808.—Napoleon's plots for the theft of the Spanish crown.—The popular rising.—Accession of Ferdinand VII.—"For more than ten years Spain had been drawn in the wake of revolutionary France. To Napoleon from the beginning of his reign she had been as subservient as Holland or Switzerland; she had made war and peace at his bidding, had surrendered Trinidad to make the treaty of Amiens, had given her fleet to destruction at Trafalgar. In other states equally subservient, such as Holland and the Italian Republic, Napoleon had remodelled the government at his pleasure, and in the end had put his own family at the head of it. After Tilsit he thought himself strong enough to make a similar change in Spain, and the occupation of Portugal seemed to afford the opportunity of doing this. By two conventions signed at Fontainebleau on October 27 [see PORTUGAL: A. D. 1807], the partition of Portugal was arranged with Spain. The Prince of the Peace was to become a sovereign prince of the Algarves, the King of Spain was to have Brazil with the title of Emperor of the two Americas, &c.; but the main provision was that a French army was to stand on the threshold of Spain ready to resist any intervention of England. The occupation of Portugal took place soon after, Junot arriving at Lisbon on November 30, just as the royal family with a following of several thousands set sail for Brazil under protection of the English fleet. At the same time there commenced in defiance of all treaties a passage of French troops into Spain, which continued until 80,000 had arrived, and had taken quiet possession of a number of Spanish fortresses. At last Murat was appointed to the command of the army of Spain. He entered the country on March 1, 1808, and marched on Madrid, calculating that the king would retire and take refuge at Seville or Cadiz. This act revealed to the world, and even to a large party among the French themselves, the nature of the power which had been created at Tilsit. The lawless acts of Napoleon's earlier life were palliated by the name of the French Revolution, and since Brumaire he had established a character for comparative moderation. But here was naked violence without the excuse of fanaticism; and on what a scale! One of the greater states of Europe was in the hands of a burglar, who would moreover, if successful, become king not only of Spain but of a boundless empire in the New World. The sequel was worse even than this commencement, although the course which events took seems to show that by means of a little delay he might have attained his end without such open defiance of law. The administration of Spain had long been in the contemptible hands of Manuel Godoy, supposed to be the queen's lover, yet at the same time high in the favor of King Charles IV. Ferdinand, the heir apparent, headed an opposition, but in character he was not better than the trio he opposed, and he had lately been put under arrest on suspicion of designs upon his father's life. To have fomented this opposition without taking either side, and to have rendered both sides equally contemptible to the Spanish people, was Napoleon's game. The Spanish people, who profoundly admired him, might then have been induced to ask him for a king. Napoleon, however, perpetrated his crime before the scandal of the palace broke out. The march of Murat now brought it to a head. On March 17 a tumult broke out at Aranjuez, which led to the fall of the favourite, and then to the abdication of the king, and the proclamation of Ferdinand amid universal truly Spanish enthusiasm. It was a fatal mistake to have forced on this popular explosion, and Napoleon has characteristically tried to conceal it by a supposititious letter, dated March 29, in which he tries to throw the blame upon Murat, to whom the letter professes to be addressed. It warns Murat against rousing Spanish patriotism and creating an opposition of the nobles and clergy, which will lead to a 'levée en masse,' and to a war without end. It predicts, in short, all that took place, but it has every mark of invention, and was certainly never received by Murat. The reign of Ferdinand having thus begun, all that the French could do was to abstain from acknowledging him, and to encourage Charles to withdraw his abdication as given under duress. By this means it became doubtful who was king of Spain, and Napoleon, having carefully refrained from taking a side, now presented himself as arbiter. Ferdinand was induced to betake himself to Napoleon's presence at Bayonne, where he arrived on April 21; his father and mother followed on the 30th. Violent scenes took place between father and son: news arrived of an insurrection at Madrid and of the stern suppression of it by Murat. In the end Napoleon succeeded in extorting the abdication both of Charles and Ferdinand. It was learned too late that the insurrection of Spain had not really been suppressed. This crime, as clumsy as it was monstrous, brought on that great popu-

lar insurrection of Europe against the universal monarchy, which has profoundly modified all subsequent history, and makes the Anti-Napoleonic Revolution an event of the same order as the French Revolution. A rising unparalleled for its suddenness and sublime spontaneousness took place throughout Spain and speedily found a response in Germany. A new impulse was given, out of which grew the great nationality movement of the nineteenth century." —J. R. Seeley, *Short Hist. of Napoleon I., ch.* 5, *sect.* 1.

Also in: Sir A. Alison, *Hist. of Europe*, 1800–1815, *ch* 52 (*v.* 11).—R. Southey, *Hist. of the Peninsular War, ch.* 2–5 (*v.* 1).—M. de Bourrienne, *Private Memoirs of Napoleon, v.* 3, *ch.* 32.—P. Lanfrey, *Hist. of Napoleon, v.* 3, *ch.* 4 *and* 6–8.

A. D. 1808 (May—September).—The stolen crown conferred on Joseph Bonaparte.—National revolt.—Organization of Juntas and planning of guerilla war.—French reverses.—Quick flight of Joseph Bonaparte from Madrid.—Arrival of English forces to aid the people.—"Murat was disappointed of the crown of Spain, on which he had fixed his hopes. It had been refused with surprise and indignation by Napoleon's brother Louis, who wore reluctantly even that of Holland, but was unwilling to exchange it for a still deeper royal servitude. Joseph Bonaparte, however, consented to abandon his more tranquil throne of Naples for the dangers and discontents which surrounded that of Spain. Napoleon, who had nominated him to it June 6th, was desirous of procuring at least the apparent consent of the Spanish nation. The Council of Castile, the chief political body of Spain, when informed of the Treaties of Bayonne, was at last induced to give a cold and reluctant assent to the accession of Joseph. Its example was followed by the Supreme Junta and the municipality of Madrid. There was, indeed, no alternative but war. Ferdinand displayed on the occasion all the baseness of his soul in its true colours. He not only wrote to Napoleon to express his satisfaction at the elevation of Joseph, he even addressed a letter of congratulation to the man who had usurped his crown! thus testifying under his own hand his utter unworthiness to wear it. A Junta of 150 Spanish notables, which had been summoned to Bayonne, accepted a constitution proposed by Napoleon, July 7th, and a day or two after Joseph left Bayonne for Madrid. He had signed on the 5th a treaty with his brother Napoleon, by which he renounced the crown of Naples, made, as King of Spain, a perpetual offensive alliance with France, fixed the number of troops and ships to be provided by each nation, and agreed to the establishment of a commercial system. By an act called Constitutional Statute, July 15th, the vacant throne of Naples was bestowed upon Joachim Murat. Ferdinand had found means to despatch from Bayonne a proclamation addressed to the Asturians, and dated May 8th, in which he called upon them to assert their independence and never to submit to the perfidious enemy who had deprived him of his rights. This letter naturally made a great impression on a proud and sensitive people; nor was its effect diminished by another proclamation which Ferdinand and his brothers were compelled to sign at Bordeaux, May 12th, calling upon the Spaniards not to oppose 'the beneficent views' of Napoleon. At this last address, evidently extorted from a prisoner, a general cry of indignation arose in Spain; the people everywhere flew to arms, except where prevented by the presence of French troops. The city of Valencia renounced its obedience to the Government of Madrid, May 23rd; Seville followed its example, and on the 27th, Joseph Palafox organised at Saragossa the insurrection of Aragon. As these insurrections were accompanied with frightful massacres, principally of persons who had held high civil or military posts under Charles IV., the better classes, to put an end to these horrible scenes, established central Juntas in the principal towns. . . . They proposed not to meet the enemy in pitched battles in the open field, but to harass, wear out, and overcome him by 'guerilla,' or the discursive and incessant attacks of separate small bands. The Supreme Junta issued instructions for conducting this mode of warfare. Andalusia was better fitted for organising the revolt, if such it can be called, than any other province of Spain. Its population formed one-fifth of the whole nation, it possessed the sole cannon-foundry in the kingdom, it contained half the disposable Spanish army, and it could receive assistance from the English both by means of Gibraltar and of Collingwood's fleet that was cruising on the coast. One of the first feats of arms of the Spaniards was to compel the surrender of five French ships of the line and a frigate, which had remained in the port of Cadiz ever since the battle of Trafalgar (June 14th). Marshal Moncey was repulsed towards the end of June in an advance upon Valencia, and compelled to retreat upon Madrid with a loss of one-third of his men. In the north-west the Spaniards were less fortunate. Cuesta, with a corps of 25,000 men, was defeated by Marshal Bessières, July 14th, at Medina del Rio Seco. The consequence of this victory was the temporary submission of Leon, Palencia, Valladolid, Zamora, and Salamanca to the French. But this misfortune was more than counterbalanced by the victory of General Castaños over the French in Andalusia, a few days after. Generals Dupont and Vedel had advanced into that province as far as Cordova, but they were defeated by Castaños with the army of Andalusia at Baylen, July 20th. On this occasion, the commencement of the French reverses in Spain, 18,000 French soldiers laid down their arms. Joseph Bonaparte found it prudent to leave Madrid, August 1st, which he had only entered on the day of the battle, and fly to Burgos. This important victory not only inspired the Spaniards with confidence, but also caused them to be regarded in Europe as a substantive Power. On the day after the battle Castaños issued a proclamation which does him great honour. He invoked the Spaniards to show humanity towards the French prisoners of war, and threatened to shoot those who should maltreat them. Such, however, was the exasperation of the people against their invaders, that numbers of the French were massacred on their route to Cadiz for embarkation, and the remainder were treated with barbarous inhumanity. These cruelties had, however, been provoked by the atrocities of the French at the capture and sack of Cordova. The campaign in Aragon was still more glorious for the Spaniards. Palafox, whether or not he was the poltroon described by Napier, had at all events the merit of organising, out of almost

nothing, the means by which the French were repulsed in several desperate assaults upon Saragossa, and at length compelled to retreat after a siege of some weeks (August 14th). The patriot cause was soon after strengthened by the arrival at Corunna of General La Romana, with 7,000 of his men from Denmark (Sept. 20th). Keats, the English admiral in the Baltic, had informed him of the rising of his countrymen and provided him the means to transport his troops from Nyborg. The English Government, soon after the breaking out of the insurrection, had proclaimed a peace with the Spanish nation (July 4th 1808), and had prepared to assist them in their heroic struggle. The example of Spain had also encouraged the Portuguese to throw off the insufferable yoke of the French. A Junta was established at Oporto, June 6th, and an insurrection was organised in all parts of the kingdom where the French forces were not predominant. Sir Arthur Wellesley, with about 10,000 British troops, landed at Mondego Bay, July 31st."—T. H. Dyer, *Hist. of Modern Europe, bk. 7, ch. 14 (v. 4).*

A. D. 1808 (September—December).—Napoleon's overwhelming campaign against the Spanish armies.—Joseph reinstated at Madrid.—"The French disasters in the Peninsula shook the belief in Napoleon's invincibility which had prevailed throughout the Continent, and the Emperor saw that he must crush the Spaniards at once, before the English could advance from the fortified base they had acquired on the flank of the Spanish plains. To secure his power on the side of Germany, he had a prolonged interview with the Czar at Erfurt. . . . On the 14th October the two Emperors parted; and at the end of the month Napoleon set out from Paris for Bayonne, and continued his journey to Vitoria. In September the French had evacuated Tudela and Burgos, and had been driven from Bilbao by General Joachim Blake [a Spanish officer of Irish descent]. But such vast reinforcements had been poured across the Pyrenees, that the French armies in Spain now numbered 250,000 men, and of these 180,000 were drawn up behind the Ebro. On the last day of October Lefevre re-took Bilbao; and Blake, after a defeat at Tornosa, fell back upon Espinosa, where Napoleon, upon his arrival, directed Marshal Victor . . . and Lefevre to assail him with 40,000 men. The Spaniards, though numbering only 25,000, held their ground till the morning of the second day's fighting (11th November). With one part of the fugitives Blake made a stand at Reynosa on the 13th against Marshal Soult, who had achieved a victory over Belvedere at Burgos on the 10th; but they were again broken, and fled to the mountains of the Cantabrian chain. With the other part of the fugitives, about 10,000, the Marquis of La Romana made his way into Leon. Castaños and Palafox had a united force of 43,000 men and 40 guns; but they were wrangling over their plans when Marshal Lannes, the intrepid Duke of Montebello, . . . appeared with 35,000 men, and broke their centre at Tudela. But on the Spanish left, the troops who had conquered at Baylen not only maintained their ground with obstinacy, but drove back the French. At length they were outnumbered, and Castaños fell back in admirable order upon Madrid through Calatayud. The right, under Palafox, retired in disorder to Saragossa; and now the road to Madrid was blocked only by General San Juan with 12,000 men, who had entrenched the Somo Sierra Pass. But this post also was carried on the 30th November by the Polish lancers of the Imperial Guard, who rode up and speared the artillerymen at their guns. Aranjuez was at once abandoned by the central Junta, and on the 2nd December the French vanguard appeared on the heights north of Madrid. The capital became at once a scene of tumult and confusion: barricades were erected, and the bells sounded the alarm, but no discipline was visible in the assembling bands; and when the heights of the Retiro, overlooking the city, were carried by the French on the morning of the 3rd December, the authorities sent out to arrange a surrender. On the following morning . . . the French entered the city, Joseph was again installed in the palace, where deputations waited upon him to congratulate him and renew their professions of devoted attachment, and the city settled down once more to tranquil submission to the foreigner."—H. R. Clinton, *The War in the Peninsula, ch. 3.*

A. D. 1808-1809 (August—January).—Wellington's first campaign.—Convention of Cintra.—Evacuation of Portugal by the French.—Napoleon in the field.—Sir John Moore's advance into Spain.—His retreat.—His repulse of Soult at Corunna.—His death.—"Sir Arthur Wellesley's division comprised 9,000 men. Another corps, under sir John Moore, which had just arrived from the Baltic, numbered 11,000 men. These two detachments were to co-operate. But their united efforts were to be directed by sir Hew Dalrymple and sir Harry Burrard, two generals whose exploits were better known in the private records of the Horse Guards than in the annals of their country. . . . Sir Arthur Wellesley landed his troops at Figuiera, a difficult task on an iron coast. On the 7th of August, major-general Spencer's corps joined the army. With 10,000 British and 5,000 Portuguese, sir Arthur Wellesley then prepared to march towards Lisbon. On the 17th he defeated at Roliça the French under Laborde. On the 20th he was at Vimiero, having been joined by general Anstruther and general Acland with their corps. He had now an army of 17,000 men. Junot had joined Laborde and Loison at Torres Vedras, and their united force was about 14,000 men, of whom 1,600 were cavalry. Early in the morning of the 21st, the French attacked the British in their position. Sir Harry Burrard had arrived on the night of the 20th, but did not land. The principal attack on the British was on the centre and left; the sea being in their rear. The attack was repulsed. Kellermann then attacked with the French reserve, and he also was driven back. Junot's left wing and centre were discomfited. The road of Torres Vedras, the shortest road to Lisbon, was uncovered. When the action was nearly over, sir Harry Burrard had landed. In a private letter, sir Arthur Wellesley wrote, 'The French got a terrible beating on the 21st. They

did not lose less, I believe, than 4,000 men, and they would have been entirely destroyed, if sir H. Burrard had not prevented me from pursuing them. Indeed, since the arrival of the great generals, we appear to have been palsied, and everything has gone on wrong.' Sir John Moore arrived with his corps on the 21st, and his troops were nearly all landed when hostilities were suspended by the Convention of Cintra for the evacuation of Portugal by the French. Sir Arthur writes to Lord Castlereagh, 'Although my name is affixed to this instrument, I beg that you will not believe that I negotiated it, that I approve of it, or that I had any hand in wording it.' On the 5th of September, he writes, 'It is quite impossible for me to continue any longer with this army; and I wish, therefore, that you would allow me to return home and resume the duties of my office.' Dalrymple, Burrard, and Wellesley were all recalled home. Sir John Moore remained at Lisbon, having been appointed to command the army. A Court of Inquiry was ordered on the subject of 'the late transactions in Portugal.' Wellesley had to bear much before the publicity of these proceedings was to set him right in public opinion. The Inquiry ended in a formal disapprobation of the armistice and convention on the part of the king being communicated to sir Hew Dalrymple. Neither of the two 'great generals' was again employed. One advantage was gained by the Convention. The Russian fleet in the Tagus was delivered up to the British. Sir John Moore, late in October, began his march into Spain, 'to co-operate,' as his instructions set forth, 'with the Spanish armies in the expulsion of the French.' He was to lead the British forces in Portugal; and to be joined by sir David Baird, with 10,000 men to be landed at Corunna. Instead of finding Spanish armies to co-operate with, he learned that the French had routed and dispersed them. Napoleon had himself come to command his troops; and had arrived at Bayonne on the 3rd of November. Moore was separated from Baird by a wide tract of country. He had been led by false information to divide his own army. He remained for some time at Salamanca, inactive and uncertain. Madrid was soon in the hands of the French. Moore made a forward movement against the advanced corps of Soult; and then, learning that the French armies were gathering all around him, he determined to retreat. Sir David Baird had previously joined him. Moore had abandoned all hopes of defending Portugal, and had directed his march towards Corunna. He commenced his retreat from Sahagun on the evening of the 24th of December. During this retreat, the retiring army constantly turned upon the pursuers, always defeating them, and on one occasion capturing general Lefebvre. The winter had set in with terrible severity; the sufferings of the troops were excessive; disorganization, the common consequence of a retreat, added to their danger. Moore saved his army from destruction by an overwhelming force when he carried it across the Esla, effectually destroying the bridge by which they passed the swollen stream. But Moore could not save his men from their own excesses, which made enemies of the inhabitants of every place through which they passed. At Lugo, on the 7th of January, 1809, the British general halted his exhausted troops, determined to give battle to Soult, to whom Napoleon had given up the pursuit of the English army, having received despatches which indicated that war with Austria was close at hand. Soult declined the conflict; and on the British marched to Corunna. On the 11th, when they had ascended the heights from which Corunna was visible, there were no transports in the bay. The troops met with a kind reception in the town; and their general applied himself to make his position as strong as possible, to resist the enemy that was approaching. On the evening of the 14th the transports arrived. The sick and wounded were got on board; and a great part of the artillery. Fourteen thousand British remained to fight, if their embarkation were molested. The battle of Corunna began at two o'clock on the 16th of January. Soult had 20,000 veterans, with numerous field-guns; and he had planted a formidable battery on the rocks, commanding the valley and the lower ridge of hills. Columns of French infantry descended from the higher ridge; and there was soon a close trial of strength between the combatants. From the lower ridge Moore beheld the 42nd and 50th driving the enemy before them through the village of Elvina. He sent a battalion of the guards to support them; but through a misconception the 42nd retired. Moore immediately dashed into the fight; exclaimed 'Forty-second, remember Egypt,' and sent them back to the village. The British held their ground or drove off their assailants; and victory was certain under the skilful direction of the heroic commander, when he was dashed to the earth by a shot from the rock battery. Sir David Baird, the second in command, had also fallen. Moore was carried into Corunna; and endured several hours of extreme torture before he yielded up his great spirit. The command had devolved upon general Hope, who thought that his first duty was now to embark the troops. . . . When the sufferers in Moore's campaign came home the hospitals were filled with wounded and sick; and some of the troops brought back a pestilential fever."—C. A. D. 1808-1809 (December—March).—The siege of Saragossa.—"When Moore was pursued by Napoleon, the Duke of Infantado, who had rallied 20,000 men in New Castile after the fall of Madrid, formed the Quixotic design of re-taking the capital. Marshal Victor, Duke of Belluno, utterly crushed his force at Ucles on the 13th January, 1809, where 1,500 Spaniards were slain, and 9,000 men and all the stores and artillery were taken. The French, in retaliation for the Spaniards having hanged some soldiers who had been captured, murdered many of the prisoners in cold blood, and perpetrated infamous atrocities on the inhabitants of Ucles. The Spaniards, however, showed their extraordinary valour behind walls in their second defence of

Saragossa, the siege of which [abandoned the previous August, after a fierce struggle] was renewed by 35,000 French under Marshals Moncey and Mortier, on the 20th December, 1808. The city was defended by Palafox, who had retired into it after his defeat at Tudela. The second siege of this renowned city — though the defence eventually proved unsuccessful — crowns with everlasting glory the Spanish War of Independence. . . . 'The citizens gave up their goods, their houses, and their bodies to the war, and, mingling with the peasants and soldiers, formed one mighty garrison suited to the vast fortress they had formed. For doors and windows were built up, house-fronts loopholed, internal communications opened, streets trenched and crossed by earthen ramparts mounted with cannon, and every strong building was a separate fortification: there was no weak point — there could be none in a city which was all fortress, where the space covered by houses was the measure of the ramparts' (Napier). All the trees outside the walls were cut down, the houses destroyed, and the materials carried into the town. . . . The public magazines were provisioned for six months, and all the conventual communities and the inhabitants had large private stores. Nearly 3,000 artillerymen and sappers, and 30,000 men of the regular army, had taken refuge in the city, and at least 20,000 citizens and fugitive peasants were fit for arms. The popular leaders had recourse to all the aid which superstition could give them: denunciations of the wrath of Heaven were hurled on those who were suspected of wavering, and the clergy readily recounted stories of miracles to encourage the faithful. Saragossa was 'believed to be invincible through the protection of Our Lady of the Pillar, who had chosen it for the seat of her peculiar worship. . . . An appearance in the sky, which at other times might have passed unremembered, and perhaps unnoticed, had given strong confirmation to the popular faith. About a month before the commencement of the first siege, a white cloud appeared at noon, and gradually assumed the form of a palm-tree; the sky being in all other parts clear, except that a few specks of fleecy cloud hovered about the larger one. It was first observed over the church of N. Señora del Portillo, and moving from thence till it seemed to be immediately above that of the pillar, continued in the same form about half an hour, and then dispersed. The inhabitants were in a state of such excitement that crowds joined in the acclamation of the first beholder, who cried out, "A miracle!"— and after the defeat of the besiegers had confirmed the omen, a miracle it was universally pronounced to have been, the people proclaiming with exultation that the Virgin had by this token prefigured the victory she had given them, and promised Zaragoza her protection as long as the world should endure' (Southey). . . . At daybreak on the 21st December, General Suchet carried the works on the Monte Torrero; but Count Gazan de la Peyrière — a general highly distinguished in the Swiss and Italian campaigns — failed in his attack upon the suburbs on the left bank of the Ebro, and the confidence of the Spaniards in their leaders was restored. Three days later the town was completely invested, the siege operations being directed by General La Coste. On the 30th December, the trenches being completed, the town was summoned to surrender, and the example of Madrid was referred to; but Palafox replied proudly, 'If Madrid has surrendered, Madrid has been sold: Saragossa will neither be sold nor surrendered.' Marshal Moncey being recalled to Madrid, Junot took command of his corps. The besieged attempted several sallies, which were repulsed; and after a heavy bombardment, the St. Joseph convent was carried by the French on the 11th January, 1809. The Spanish leaders maintained the courage of their countrymen by proclaiming a forged despatch narrating the defeat of Napoleon. The guerrilla bands began to gather in round the French, and their condition was becoming perilous. But the command had now been taken by the invincible Marshal Lannes, Duke of Montebello (who had been detained by a long illness); the approaches were steadily pushed on, the breaches in the walls became wider, and on the 29th the French rushed forward and took possession of the ramparts. 'Thus the walls of Zaragoza went to the ground; but Zaragoza remained erect, and as the broken girdle fell from the heroic city, the besiegers started at her naked strength. The regular defences had crumbled, but the popular resistance was instantly called with all its terrors into action; and as if fortune had resolved to mark the exact moment when the ordinary calculations of science should cease, the chief engineers on both sides [La Coste and San Genis] were simultaneously slain' (Napier). . . . The Junta was in no degree cowed: they resolved on resistance to the last extremity, and a row of gibbets was raised for any who should dare to propose surrender. Additional barricades were constructed, and alarm-bells were rung to summon the citizens to the threatened points. As each house was in itself a fort which had to be separately attacked, mining now was had recourse to. In this art the skill of the French was unquestioned, and room after room and house after house was carried. But still the constancy of the besieged was unshaken, and the French soldiers began to murmur at their excessive toil. From so many of the women and children being huddled together in the cellars of the city, for safety from the shells and cannon-balls, a pestilence arose, and slowly spread from the besieged to the besiegers. 'The strong and the weak, the daring soldier and the shrinking child, fell before it alike; and such was the predisposition to disease, that the slightest wound gangrened and became incurable. In the beginning of February the daily deaths were from four to five hundred; — the living were unable to bury the dead; and thousands of carcases, scattered about the streets and courtyards, or piled in heaps at the doors of the churches, were left to dissolve in their own corruption, or be licked up by the flames of burning houses as the defence became concentrated' (Napier). On the 18th February a great assault took place, and so much of the town was carried that further resistance was hopeless. Terms of capitulation were offered by the besieged, but were rejected by Lannes, and on the 19th the heavy guns opened from the batteries on the left bank of the Ebro, to sweep the houses on the quays. On the 20th, when all the great leaders were dead or prostrated with fever, and none but the soldier-priest Ric remained to lead the diminished band of heroes, Saragossa surrendered, — at discretion,

according to the French; on honourable terms, according to the Spaniards. Such was the close of one of the most heroic defences in the history of the world. If any conditions were really accepted, they were ill observed by the victors: the churches were plundered, and many of the clergy and monks were put to death. . . . The other strongholds in Aragon, one after another, surrendered to the French before the end of March. In Catalonia the French, under General Gouvion St. Cyr, had met with equal success. With 30,000 men St. Cyr had taken Rosas after a month's siege — which was prolonged by the presence of that brilliant naval commander, Lord Cochrane (afterwards Earl of Dundonald), with an English frigate in the harbour — in December, 1808, had routed Reding at Cardadeu, had relieved Barcelona (where General Duhesme was shut up with 8,000 Frenchmen), and had again, on the 21st December, routed Reding at Molinos del Rey, where all the Spanish stores, including 30,000 muskets from England, were taken. In the spring of 1809 Reding made another attempt to achieve the independence of the north-east, and moved to relieve Saragossa; but on the 17th February he was met by St. Cyr at Igualada, where Reding himself was killed and his army was dispersed. The siege of Gerona alone in the north-east of Spain remained to be undertaken." —H. R. Clinton, *The War in the Peninsula, ch.* 3.

Also in: C. M. Yonge, *Book of Golden Deeds, p.* 365.—R. Southey, *Hist. of the Peninsular War, ch.* 18 (*v.* 3).—Sir W. F. P. Napier, *Hist. of the War in the Peninsula, bk.* 5, *ch.* 2–3 (*v.* 1).—Baron de Marbot, *Memoirs, v.* 1, *ch.* 40.

A. D. 1809 (February — June).—The war in Aragon.— Siege of Gerona. — "This decisive victory [of Igualada] terminated the regular war in Catalonia; and St Cyr, retiring to Vich, commenced preparations for the siege of Gerona. The undertaking was for some time delayed by the discord of St Cyr and Verdier; but in the beginning of May they appeared before the town, and on the 1st of June the investment was completed. But the prowess of the Spaniards nowhere appeared to greater advantage than in the defence of their walled towns: it was not till 12th August, after 37 days of open trenches, and two unsuccessful assaults, that the French possessed themselves of the fort of Monjuich, which commands the town: yet the gallant governor, Alvarez, still held out, and the safe arrival of a convoy sent by Blake reanimated the spirit of the garrison. The grand assault of the lower town was given (Sept. 17); but the French were repulsed from the breach with the loss of 1,600 men; and St Cyr, despairing of carrying the place by force, converted the siege into a blockade. The capture of three successive convoys, sent by Blake for their relief, reduced the besieged at last to extremity; famine and pestilence devastated the city; but it was not till the inhabitants were reduced to the necessity of eating hair that the place was yielded (Dec. 12) to Augereau, who had superseded St Cyr in the command. A more memorable resistance is not on record; but the heroic Alvarez, to the eternal disgrace of Augereau, was immured in a dungeon at Figueras, where he soon afterwards died. Junot, in the mean time, had been taken ill, and was succeeded in the command in Aragon by Suchet, a young general whose talents and success gave him a brilliant career in the later years of the empire. His first essay, however, was unfortunate; for the indefatigable Blake, encouraged by the retreat of St Cyr towards the Pyrenees, had again advanced with 12,000 men; and an action ensued (May 23) at Alcaniz, in which the French, seized with a panic, fled in confusion from the field. This unwonted success emboldened Blake to approach Saragossa; but the discipline and manœuvres of the French asserted their wonted superiority in the plains; the Spaniards were routed close to Saragossa (June 16), and more decisively at Belchite the next day. The army of Blake was entirely dispersed; and all regular resistance ceased in Aragon, as it had done in Catalonia, after the fall of Gerona."—*Epitome of Alison's Hist. of Europe, sect.* 566–567.

A. D. 1809 (February — July). —Wellington again in the English command.—The French advance into Portugal checked. — Passage of the Douro by the English.— Battle of Talavera. —"Napoleon, before Moore's corps had actually left Corunna, conceived the war at an end, and, in issuing instructions to his marshals, anticipated, with no unreasonable confidence, the complete subjugation of the Peninsula. Excepting, indeed, some isolated districts in the east, the only parts now in possession of the Spaniards or their allies were Andalusia, which had been saved by the precipitate recall of Napoleon to the north; and Portugal, which, still in arms against the French, was nominally occupied by a British corps of 10,000 men, left there under Sir John Cradock at the time of General Moore's departure with the bulk of the army for Spain. The proceedings of the French marshals for the recovery of the entire Peninsula were speedily arranged. Lannes took the direction of the siege of Saragossa, where the Spaniards, fighting as usual with admirable constancy from behind stone walls, were holding two French corps at bay. Lefebvre drove one Spanish army into the recesses of the Sierra Morena, and Victor chased another into the fastnesses of Murcia. Meantime Soult, after recoiling awhile from the dying blows of Moore, had promptly occupied Gallicia upon the departure of the English, and was preparing to cross the Portuguese frontier on his work of conquest. In aid of this design it was concerted that while the last-named marshal advanced from the north, Victor, by way of Elvas, and Lapisse by way of Almeida, should converge together upon Portugal, and that when the English at Lisbon had been driven to their ships the several corps should unite for the final subjugation of the Peninsula by the occupation of Andalusia. Accordingly, leaving Ney to maintain the ground already won, Soult descended with 30,000 men upon the Douro, and by the end of March was in secure possession of Oporto. Had he continued his advance, it is not impossible that the campaign might have had the termination he desired; but at this point he waited for intelligence of the English in his front and of Victor and Lapisse on his flank. His caution saved Portugal, for, while he still hesitated on the brink of the Douro, there again arrived in the Tagus that renowned commander before whose genius the fortunes not only of the marshals, but of their imperial master, were finally to fail. England was now at the commencement of her greatest war. The system of small expeditions and insignificant diversions,

though not yet conclusively abandoned, was soon superseded by the glories of a visible contest: and in a short time it was known and felt by a great majority of the nation, that on the field of the Peninsula England was fairly pitted against France. . . . At the commencement of the year 1809, when the prospects of Spanish independence were at their very gloomiest point, the British Cabinet had proposed and concluded a comprehensive treaty of alliance with the Provisional Administration of Spain; and it was now resolved that the contest in the Peninsula should be continued on a scale more effectual than before, and that the principal, instead of the secondary, part should be borne by England. . . . England's colonial requirements left her little to show against the myriads of the continent. It was calculated at the time that 60,000 British soldiers might have been made disposable for the Peninsular service, but at no period of the war was such a force ever actually collected under the standards of Wellington, while Napoleon could maintain his 300,000 warriors in Spain, without materially disabling the arms of the Empire on the Danube or the Rhine. We had allies, it is true, in the troops of the country; but these at first were little better than refractory recruits, requiring all the accessories of discipline, equipment, and organisation; jealous of all foreigners, even as friends, and not unreasonably suspicious of supporters who could always find in their ships a refuge which was denied to themselves. But above all these difficulties was that arising from the inexperience of the Government in continental warfare. . . . When, however, with these ambiguous prospects, the Government did at length resolve on the systematic prosecution of the Peninsular war, the eyes of the nation were at once instinctively turned on Sir Arthur Wellesley as the general to conduct it. . . . He stoutly declared his opinion that Portugal was tenable against the French, even if actual possessors of Spain, and that it offered ample opportunities of influencing the great result of the war. With these views he recommended that the Portuguese army should be organised at its full strength; that it should be in part taken into British pay and under the direction of British officers, and that a force of not less than 30,000 English troops should be despatched to keep this army together. . . . Such was the prestige already attached to Wellesley's name that his arrival in the Tagus changed every feature of the scene. No longer suspicious of our intentions, the Portuguese Government gave prompt effect to the suggestions of the English commander. . . . The command-in-chief of the native army was intrusted to an English officer of great distinction, General Beresford; and no time was lost in once more testing the efficacy of the British arms. . . . Of the Spanish armies we need only say that they had been repeatedly routed with invariable certainty and more or less disgrace, though Cuesta still held a nominal force together in the valley of the Tagus. There were, therefore, two courses open to the British commander: —either to repel the menaced advance of Soult by marching on Oporto, or to effect a junction with Cuesta, and try the result of a demonstration against Madrid. The latter of these plans was wisely postponed for the moment, and, preference having been decisively given to the former, the troops at once commenced their march upon the Douro. The British force under Sir Arthur Wellesley's command amounted at this time to about 20,000 men, to which about 15,000 Portuguese, in a respectable state of organisation, were added by the exertions of Beresford. Of these about 24,000 were now led against Soult, who, though not inferior in strength, no sooner ascertained the advance of the English commander, than he arranged for a retreat by detaching Loison with 6,000 men to dislodge a Portuguese post from his left rear. Sir Arthur's intention was to envelope, if possible, the French corps by pushing forward a strong force upon its left, and thus intercepting its retreat toward Ney's position, while the main body assaulted Soult in his quarters at Oporto. The former of these operations he intrusted to Beresford, the latter he directed in person. On the 12th of May the troops reached the southern bank of the Douro; the waters of which, 300 yards in width, rolled between them and their adversaries. . . . Availing himself of a point where the river by a bend in its course was not easily visible from the town, Sir Arthur determined on transporting, if possible, a few troops to the northern bank, and occupying an unfinished stone building, which he perceived was capable of affording temporary cover. The means were soon supplied by the activity of Colonel Waters—an officer whose habitual audacity rendered him one of the heroes of this memorable war. Crossing in a skiff to the opposite bank, he returned with two or three boats, and in a few minutes a company of the Buffs was established in the building. Reinforcements quickly followed, but not without discovery. The alarm was given, and presently the edifice was enveloped by the eager battalions of the French. The British, however, held their ground; a passage was effected at other points during the struggle; the French, after an ineffectual resistance, were fain to abandon the city in precipitation, and Sir Arthur, after his unexampled feat of arms, sat down that evening to the dinner which had been prepared for Soult. . . . This brilliant operation being effected, Sir Arthur was now at liberty to turn to the main project of the campaign—that to which, in fact, the attack upon Soult had been subsidiary—the defeat of Victor in Estremadura. . . . Cuesta would take no advice, and insisted on the adoption of his own schemes with such obstinacy, that Sir Arthur was compelled to frame his plans accordingly. Instead, therefore, of circumventing Victor as he had intended, he advanced into Spain at the beginning of July, to effect a junction with Cuesta and feel his way towards Madrid. The armies, when united, formed a mass of 78,000 combatants; but of these 56,000 were Spanish, and for the brunt of war Sir Arthur could only reckon on his 22,000 British troops, Beresford's Portuguese having been despatched to the north of Portugal. On the other side, Victor's force had been strengthened by the succours which Joseph Bonaparte, alarmed for the safety of Madrid, had hastily concentrated at Toledo; and when the two armies at length confronted each other at Talavera, it was found that 55,000 excellent French troops were arrayed against Sir Arthur and his ally, while nearly as many more were descending from the north on the line of the British com-

munications along the valley of the Tagus. On the 28th of July the British commander, after making the best dispositions in his power, received the attack of the French, directed by Joseph Bonaparte in person, with Victor and Jourdan at his side, and after an engagement of great severity, in which the Spaniards were virtually inactive, he remained master of the field against double his numbers, having repulsed the enemy at all points with heavy loss, and having captured several hundred prisoners and 17 pieces of cannon in this the first great pitched battle between the French and English in the Peninsula. In this well fought field of Talavera, the French had thrown, for the first time, their whole disposable force upon the British army without success; and Sir Arthur Wellesley inferred, with a justifiable confidence, that the relative superiority of his troops to those of the Emperor was practically decided. Jomini, the French military historian, confesses almost as much; and the opinions of Napoleon himself, as visible in his correspondence, underwent from that moment a serious change."—*Memoir of Wellington, from "The Times" of Sept.* 15–16, 1852.

A. D. 1809 (August—November).—Battles of Almonacid, Puerto de Baños, Ocana, and Alba de Tormes.—Soon after Wellington's unfruitful victory at Talavera, "Venegas had advanced as far as Aranjuez, and was besieging Toledo; but the retreat of the British having set the French armies at liberty, he was attacked and defeated after a sharp action at Almonacid (Aug. 11) by Dessoles and Sebastiani; and Sir Robert Wilson, who had approached Madrid with 6,000 Spaniards and Portuguese, was encountered and driven back by Ney (Aug. 8) at Puerto de Baños. The British at length, after lying a month at Deleitosa, were compelled, by the scandalous failure of the Spanish authorities to furnish them with supplies or provisions, to cross the mountains and fix their headquarters at Badajos, after an angry correspondence between Wellesley and Cuesta, who soon after was removed from his command. A gleam of success at Tamanes, where Marchand was routed with loss (Oct. 24) by Romana's army under the Duke del Parque, encouraged the Spaniards to make another effort for the recovery of Madrid; and an army of 50,000 men, including 7,000 horse and 60 pieces of cannon, advanced for this purpose from the Sierra Morena, under General Areizaga. The battle was fought (Nov. 12) at Ocana, near Aranjuez; but though the Spaniards behaved with considerable spirit, the miserable incapacity of their commander counterbalanced all their efforts, and an unparalleled rout was the result. Pursued over the wide plains of Castile by the French cavalry, 20,000 prisoners were taken, with all the guns and stores: the wreck was complete and irretrievable; and the defeat of the Duke del Parque (Nov. 25) at Alba de Tormes, dispersed the last force which could be called a Spanish army. It was evident from these events that Portugal was the only basis from which the deliverance of the Peninsula could be effected." —*Epitome of Alison's Hist. of Europe, sect.* 576 (*ch.* 62, *v.* 13 *of complete work*).

A. D. 1809 (August—December).—Wellington's difficulties.— His retreat into Portugal.—"In the course of the 29th, the army was reinforced by the arrival of a troop of horse-artillery, and a brigade of light troops from Lisbon, under General Crawford. Under the circumstances of his situation, however, it was impossible for Sir Arthur Wellesley to follow up his victory. The position he occupied was still one of extreme peril. A powerful enemy was advancing on his rear; and no reliance could be placed for the supply of his army, either on the promises of the Spanish General, or of the Junta. The army of Vanegas, which, in obedience to the orders of the Supreme Junta, had advanced from Madrilejos, was engaged, during the 28th and 29th, in endeavouring to dislodge the French garrison from Toledo. His advance pushed on during the night to the neighbourhood of Madrid, and took prisoners some patroles of the enemy. Vanegas, however no sooner learned from the prisoners that Joseph and Sebastiani were approaching, than he . . . desisted from any further offensive operations. The intelligence that Vanegas had failed in executing the part allotted to him, was speedily followed by information that Soult had with facility driven the Spaniards from the passes leading from Salamanca to Placentia. It was in consequence arranged between the Generals, that the British army should immediately march to attack Soult, and that Cuesta should remain in the position of Talavera, to protect this movement from any operation of Victor. The wounded likewise were to be left in charge of Cuesta. . . . On the morning of the 3rd of August, the British accordingly commenced their march on Oropesa. On his arrival there, Sir Arthur Wellesley received intelligence that Soult was already at Naval Moral. . . . Shortly after, a courier arrived from Cuesta, announcing, that, as the enemy were stated to be advancing on his flank, and as it was ascertained that the corps of Ney and Mortier had been united under Soult, he had determined on quitting his position, and joining the British army at Oropesa. This movement was executed the same night; and nearly the whole of the British wounded were left unprotected in the town of Talavera. The conduct of Cuesta, in this precipitate retreat, is altogether indefensible. . . . In quitting the position of Talavera, Cuesta had abandoned the only situation in which the advance of Victor on the British rear could be resisted with any prospect of success. . . . The whole calculations of Sir Arthur Wellesley were at once overthrown. . . . Sir Arthur determined to throw his army across the Tagus by the bridge of Arzobisbo. . . . Cuesta . . . followed the British in their retreat to the bridge of Arzobisbo, and leaving the Duke del Albuquerque with two divisions of infantry and one of cavalry to defend it, he withdrew the remainder of his army to Paraleda de Garben. The French, however, having taken post on the opposite side of the river, soon succeeded in discovering a ford by which they crossed, and surprising the Spaniards, drove them at once from the works, with the loss of 30 pieces of cannon. After this, Cuesta with his whole force fell back on Deleytosa, while the British moved to Xaraicejo. . . . Vanegas . . . remained with his army in the neighbourhood of Aranjuez. On the 5th of August, he succeeded in gaining a decided advantage over an advanced division of the enemy. . . . Harassed by inconsistent orders,

Vanegas was unfortunately induced again to advance, and give battle to the corps of Sebastiani at Almonacid. This engagement, though many of the Spanish troops behaved with great gallantry, terminated in the complete defeat of the army of Vanegas. It was driven to the Sierra Morena, with the loss of all its baggage and artillery. With this action terminated the campaign which had been undertaken for the relief of Madrid, and the expulsion of the enemy from the central provinces of Spain. The British army at Xaraicejo, still served as a shield to the southern provinces, and Sir Arthur Wellesley, (whom the gratitude of his country had now ennobled,) [raising him to the peerage as Baron Duke of Wellesley and Viscount Wellington of Talavera] considered it of importance to maintain the position he then occupied. But the total failure of supplies rendered this impossible, and about the 20th of August he fell back through Merida on Badajos, in the neighbourhood of which he established his army. At this period all operations in concert ceased between the English and Spanish armies. The Supreme Junta complained bitterly of the retreat of the former, which left the road to Seville and Cadiz open to the enemy, while the Marquis Wellesley, then ambassador in Spain, made strong representations of the privations to which the British army had been exposed, by the inattention and neglect of the authorities. In the correspondence which ensued, it appeared that the measure of retreat had been forced on Lord Wellington, by the absolute impossibility of supporting his army in the ground he occupied. . . . The year had closed in Spain triumphantly for the French arms, as it had commenced. The Spanish armies had sustained a series of unparalleled defeats. The British had retired into Portugal; and the efforts of Lord Wellington, were for the present, limited to the defence of that kingdom."—T. Hamilton, *Annals of the Peninsular Campaigns, ch.* 7 *and* 9.

A. D. 1809-1810 (October — September).—The Lines of Torres Vedras.—"Since Austria had laid down arms by signing the peace of Vienna, and had thus proved the inefficiency of England's last allies—since among the sovereigns of the Continent Napoleon boasted none but courtiers or subjects, Wellington saw that all the resources and all the efforts of his gigantic power would be turned against the only country which still struggled for the liberty of Europe. What could Spain achieve with her bands of insurgents and her defeated armies, albeit so persevering? or the small English army effect against so formidable an adversary, aided by the combined forces of so many nations? But during the very time when the world looked upon all as lost, and Napoleon's proudest enemies were growing weak, Wellington never despaired of the cause he had embraced. Far from allowing himself to be cast down by the magnitude or the imminence of the danger, he derived from that very circumstance, not only the resolution of fighting to the last extremity, but also the energy to conceive and to execute a project which will continue to be the admiration of the world, and an everlasting lesson to nations oppressed by foreign rule. He had always thought that some day, sooner or later, the whole of Europe would rise against Napoleon's tyranny, provided that an opportunity for such a rising were afforded to it by a prolonged resistance in certain points. The end to aim at therefore was, in his opinion, not so much to drive the French out of the Peninsula, as the tacticians of the central junta wildly fancied, but rather to keep the contest there alive at any cost, until the moment should arrive for so inevitable and universal a revolt. In view of the new invasion pouring into Spain, he could not dream of undertaking any offensive operations against the French. Even if conducted with genius, they would have rapidly exhausted his very limited forces. His small army . . . could not have lasted a month amidst the large masses of French troops then in Spain. He therefore resolved to entrench it in strong positions, rendered still more formidable by every resource of defensive warfare, where he might defy superiority in numbers and the risk of surprise, where he could also obtain supplies by sea, and whence if necessary he might embark in case of disaster; where, also, he might take advantage of the distances and the difficulties of communication which were so rapidly exhausting our troops, by creating around us a desert in which we should find it impossible to live. To stand out under these restricted but vigorously conceived conditions, and to resist with indomitable obstinacy until Europe, ashamed to let him succumb, should come to his succour, was the only course which afforded Wellington some chance of success in view of the feeble means at his disposal; and such, with equal firmness and decision, was the one he now adopted. The necessity which suggested it to him in no wise diminishes the merit or originality of an operation which was, one may say, without precedent in military history. The position he was seeking for he found in the environs of Lisbon, in the peninsula formed by the Tagus at its entrance to the sea. Protected on almost every side either by the ocean or the river, which at this point is nearly as wide as an inland sea, this peninsula was accessible only on the north where it joined the mainland. There, however, the prolongation of the Sierra d'Estrella presented a series of rugged heights, craggy precipices and deep ravines filled with torrents, forming a true natural barrier, the strength of which had already struck more than one military observer. . . . Wellington was the first who conceived and executed the project of transforming the whole peninsula into a colossal fortress, of more than a hundred miles in circumference. He desired that this fortress should be composed of three concentric enclosures, defended by cannon, and large enough to contain not only his army and the Portuguese allies—comprising the regular troops, the militia and Ordenanzas—but the whole available population of the Southern provinces of Portugal, with their harvests, their cattle and their provisions, so that the country surrounding Lisbon should offer no resource whatever to the invaders. He at the same time secured his retreat by means of a spacious and fortified port, in which, should any untoward accident occur, the English army and even the Portuguese troops might embark in safety. This immense citadel extended to the north from Zizembre and the heights of Torres Vedras, which protected its front, as far as

Alemquer; thence to the east by Sobral and Alvera it followed the counterforts of the Estrella which overhang the Tagus, and extended to Lisbon, where it was covered alike by the mouth of the river and by the ocean. . . . From the beginning of the month of October, 1809, with the aid of Colonel Fletcher of the Engineers, he had employed thousands of workmen and peasants, without intermission, in throwing up intrenchments, constructing redoubts, and forming sluices for inundating the plain."— P. Lanfrey, *Life of Napoleon I., v.* 4, *ch.* 4.

A. D. 1810-1812.—The French advance into Portugal. — Their recoil from the Lines of Torres Vedras.—"By the spring of 1810, the French armies in Spain numbered fully 350,000 men, and Napoleon had intended to cross the Pyrenees, at the head of this enormous force. His marriage, however, or more probably the innumerable toils and cares of Empire prevented him from carrying out his purpose; and this was one of the capital mistakes of his life, for his presence was necessary on the scene of events. He still despised the insurrection of Spain; he held Wellington cheap as a 'Sepoy general'; strange as it may appear, he was wholly ignorant of the existence of the Lines of Torres Vedras, and he persisted in maintaining that the only real enemy in the Peninsula was the British army, which he estimated at 25,000 men. He gave Masséna 70,000, with orders 'to drive the English into the sea'; and at the same time, he sent a great army to subdue Andalusia and the South, false to his art in thus dividing his forces. A contest followed renowned in history, and big with memorable results for Europe. Masséna took the fortresses on the northeast of Portugal, and by the close of September had entered Beira; he met a bloody reverse at Busaco [September 27], but he succeeded in turning Wellington's flank, and he advanced, in high heart, from Coimbra, on Lisbon. To his amazement, however, the impregnable lines, a gigantic obstacle utterly unforeseen, rose before him, and brought the invaders to a stand, and the 'spoiled child of victory,' daring as he was, after vain efforts to find a vulnerable point, recoiled from before the invincible rampart, baffled and indignant, but as yet hopeful. Masséna, with admirable skill, now chose a formidable position near the Tagus, and held the British commander in check. . . . But Wellington, with wise, if stern, forethought, had wasted the adjoining region with fire and sword; Napoleon, meditating a new war, was unable to despatch a regiment from France; Soult, ordered to move from Andalusia to the aid of his colleague, paused and hung back; and Masséna, his army literally starved out, and strengthened by a small detachment only, was at last reluctantly forced to retreat. The movement began in March, 1811; it was conducted with no ordinary skill; but Wellington had attained his object and the French general re-entered Spain with the wreck only of a once noble force. Masséna, however, would not confess defeat; having restored and largely increased his army, he attacked Wellington at Fuentes de Onoro, and possibly only missed a victory, owing to the jealousies of inferior men. This, nevertheless, was his last effort; he was superseded in his command by Napoleon, unjust in this instance to his best lieutenant, and Wellington's conduct of the war had been completely justified. Torres Vedras permanently arrested Napoleon's march of conquest; the French never entered Portugal again. . . . Meantime the never-ceasing insurrection of Spain continued to waste the Imperial forces, and surrounded them, as it were, with a circle of fire. It was all in vain that another great army was struck down in the field at Ocana; that Suchet invaded and held Valencia; that Soult ravaged Andalusia; that Victor besieged Cadiz. The resistance of the nation became more intense than ever; Saguntum, which had defied Hannibal, Girona, Tortosa, and, above all, Tarragona, defended their walls to the last; and not a village from Asturias to Granada acknowledged Joseph at Madrid, as its lawful king. . . . After Fuentes de Onoro the contest in Spain had languished in 1811, though Marmont and Soult missed a great chance of assailing Wellington, with very superior numbers. In the following year the British commander pounced on Ciudad Rodrigo, and Badajoz, the keys of Spain from the Portuguese frontier, completely deceiving the distant Emperor, who would direct operations from Paris; and he defeated Marmont in a great battle, at Salamanca, beside the Tormes, which threw open to him the gates of Madrid. Yet, in an effort made against the communications of the French, the object he steadily kept in view, he was baffled by the resistance of Burgos, and before long he was in retreat on Portugal, having just escaped from a great French army, so various were the fortunes of this most instructive war."—W. O'C. Morris, *Napoleon, ch.* 10–11.

A. D. 1812 (June—August).—Wellington's victory at Salamanca.—Abandonment of Madrid by King Joseph.—"In the month of May, 1812, that rupture took place [between Napoleon and Alexander I. of Russia] which was to determine, by its issue, whether Europe should acknowledge one master; and Napoleon, too confident in his own fortunes, put himself at the head of his armies and marched on Moscow. The war in Spain, which had hitherto occupied the first place in public attention, became from that hour, as far as France was concerned, a matter of minor consideration. Whatever effective battalions were at the disposal of the war-minister, were forwarded to the Vistula; while to recruit the regiments in Spain, depôts were formed in the south, out of which, from time to time, a body of conscripts were equipped and dispatched

to reinforce the French armies. Lord Wellington's army consisted of 60,000 men, Portuguese and Spaniards included. Of these, 10,000 infantry, with about 1,200 cavalry, were cantoned on the Tagus at Almarez; while the commander-in-chief, with the remainder, prepared to operate, on the north of that river, against Marmont. The capture of the redoubts at Almarez had, in some degree, isolated the French marshal; and, although he was at the head of 50,000 veterans, Lord Wellington felt himself in a condition to cope with him. At the same time Lord Wellington had to observe Soult, who, commanding the army of the south, was around Seville and Cordova with 58,000 men — while Suchet held the eastern provinces with 50,000 excellent troops — Souham was in the north with 10,000 — and the army of the centre, probably 15,000 more, was disposed around the capital, and kept open the communications between the detached corps. On the other hand, there were on foot no Spanish armies deserving of the name. Bands of guerrillas moved, indeed, hither and thither, rendering the communications between the French armies and their depôts exceedingly insecure; but throughout the north, and west, and centre of Spain, there was no single corps in arms of any military respectability. In the east, Generals Lacy and Sarsfield were at the head of corps which did good service, and occupied Suchet pretty well; while D'Eroles, more bold than prudent, committed himself at Rhonda with General Rourke, in a combat which ended in his total defeat and the dispersion of his troops. Yet were the French far from being masters of the country. Few fortified towns, Cadiz and Alicante excepted, continued to display the standard of independence, but every Sierra and mountain range swarmed with the enemies of oppression, out of whom an army, formidable from its numbers, if not for its discipline, might at any moment be formed. But it had never entered into the counsels of the allies to furnish a nucleus round which such an army might be gathered. . . . Meanwhile, the commander-in-chief, after having given his army a few weeks' repose, . . . broke up from his cantonments and advanced in the direction of Salamanca. On the 17th of June his divisions crossed the Tormes by the fords above and below the town, and, finding no force in the field competent to resist them, marched direct upon the capital of the province." Salamanca was taken on the 27th of June, after a siege of ten days, and a series of manœuvres — a great game of tactics between the opposing commanders — ensued, which occupied their armies without any serious collision until the 22d of July, when the decisive battle of Salamanca was fought. "The dispositions of the French, though masterly against one less self-collected, had been, throughout the day, in Wellington's opinion, full of hazard. They aimed at too much — and, manœuvring to throw themselves in force upon the English right, risked, as the event proved fatally, the weakening of their own right and centre. Lord Wellington saw that filing constantly in one direction disconnected the divisions of Marmont's army, and left an interval where he might strike to advantage. . . . It was the first mistake that Marmont had made, and Wellington never permitted him to retrieve it. Lord Wellington had dined amid the ranks of the third division, and Packenham, its brave and marvellous leader, was one of those who shared his simple and soldier-like meal. [illegible] commander-in-chief gave his orders, pointing to the following words: 'Do you see those heights on the left, Packenham? Then move round them with columns of battalions — and don't return to me to the devil.' [illegible] division was formed — and the movement executed admirably. . . . By this magnificent manœuvre the whole of the enemy's left was destroyed. Upward of 3,000 prisoners remained in the hands of the victors, while the rest, broken and disjointed, fell back in utter confusion upon the reserves, whom they swept away with them in their flight. Meanwhile, in the centre, a terrible contest was going on. . . . Marmont, . . . struck down by the explosion of a shell, was carried off the field early in the battle, with a broken arm and two severe wounds in the side. The command then devolved upon Clausel, who did all that man in his situation could do to retrieve the fortune of the day. . . . But Lord Wellington was not to be arrested in his success, nor could his troops be restrained in their career of victory. . . . Seven thousand prisoners, two eagles with a number of cannon and other trophies remained in the hands of the English: 21,000 men, in addition, either died on the field or were disabled by wounds; whereas the loss on the part of the allies amounted to scarcely 5,000 men. . . . After this disaster, Clausel continued his retreat by forced marches. . . . Meanwhile, Joseph, ignorant of the result of the late battle, was in his way, with 20,000 men, to join Marmont, and had arrived at the neighbourhood of Arevalo before the intelligence of that officer's defeat was communicated to him. He directed his columns instantly toward Segovia. . . . On the 7th of August the British army moved; . . . while Joseph, retreating with precipitation, left the passes of the Guadarama open, and returned to Madrid, where the confusion was now extreme. . . . Lord Wellington's march was conducted with all the celerity and good order which distinguished every movement of his now magnificent army. On the 7th, he entered Segovia. . . . On the 12th [he] entered Madrid in triumph. . . . The city exhibited the appearance of a carnival, and the festivities were kept up till the dawn of the 15th came in. . . . Immediately the new constitution was proclaimed; Don Carlos D'Espana was appointed governor of the city, and the people, still rejoicing, yet restrained from excesses of every sort, returned to their usual employments."—Gen. Vane (Marquess of Londonderry), *Story of the Peninsular War, ch.* 30.

A. D. 1812-1814.—Final campaigns of the Peninsular War.—Expulsion of the French.—"The south and centre of Spain . . . seemed clear of enemies, but the hold of the French was in fact shaken only, not broken; for in fact though Wellington's march had forced his enemies in two directions (Clausel, with the remainder of Marmont's army, having retired north, while the king withdrew south-east), such were their numbers that each division became the centre of an army as powerful as his own. . . . Of the two armies against which Wellington had to contend by far the largest was the army of Soult

and the king, on the south-east. On the other hand, Clausel's forces were beaten and retreating, so that it appeared to the general better to leave a detachment under Hill to cover Madrid, while he himself repaired with the bulk of his army to strike a final blow at Clausel by the capture of Burgos, intending to return at once and with his whole combined forces fight a great battle with Soult and the king before the capital. . . . The resistance offered by Burgos and the deficiency of proper artillery proved greater obstacles than had been expected. The delay thus caused allowed the French to recover. . . . As Soult began to draw towards Madrid from Valencia, thus threatening the safety of Hill, there was no course left but to summon that general northward, and to make a combined retreat towards Salamanca and Portugal. . . . This was the last of Wellington's retreats. Events in Europe lessened the power of his enemies; while fighting for his very existence on the main continent of Europe, Napoleon could not but regard the war in Spain as a very secondary concern, and a great many old and valuable soldiers were withdrawn. The jealousy which existed between Joseph and the generals, and the dislike of the great generals to take upon themselves the Spanish war, threw it into inferior hands for some little while, and there is little more to chronicle than a succession of hard-won victories. . . . A vigorous insurrection had arisen all along the northern provinces; and it was this more than anything else which decided Wellington's course of action. While leaving troops to occupy the attention of the French in the valley of the Tagus, he intended to march northwards, . . . connect himself with the northern insurgents, and directly threaten the communications with France. . . . As he had expected, the French had to fall back before him; he compelled them to evacuate Burgos and attempt to defend the Ebro. Their position there was turned, and they had again to fall back into the basin of Vittoria. This is the plain of the river Zadora, which forms in its course almost a right angle at the south-west corner of the plain, which it thus surrounds on two sides. Across the plain and through Vittoria runs the high road to France, the only one in the neighbourhood sufficiently large to allow of the retreat of the French army, encumbered with all its stores and baggage, and the accumulated wealth of some years of occupation of Spain. While Wellington forced the passage of the river in front south of the great bend, and drove the enemy back to the town of Vittoria, Graham beyond the town closed this road. The beaten enemy had to retreat as best he could towards Salvatierra, leaving behind all the artillery, stores, baggage, and equipments [June 21, 1813]. The offensive armies of France had now to assume the defensive and to guard their own frontier. Before advancing to attack them in the mountains, Wellington undertook the blockade of Pampeluna and the siege of St. Sebastian. It was impossible for the French any longer to regard diplomatic or dynastic niceties. Joseph was superseded, and the defence of France intrusted to Soult, with whom the king had hopelessly quarrelled. He proved himself worthy of the charge. A series of terrible battles was fought in the Pyrenees, but one by one his positions were forced. With fearful bloodshed, St. Sebastian was taken, the Bidasoa was crossed (Oct. 7), the battle of the Nivelle fought and won (Nov. 10), and at length, in February, the lower Adour was passed, Bayonne invested, and Soult obliged to withdraw towards the east. But by this time events on the other side of France had changed the appearance of the war. . . . Napoleon was being constantly driven backward upon the east. The effect could not but be felt by the southern army, and Soult deserves great credit for the skill with which he still held at bay the victorious English. He was however defeated at Orthes (Feb. 27), lost Bordeaux (March 8), and was finally driven eastward towards Toulouse, intending to act in union with Suchet, whose army in Catalonia was as yet unbeaten. On the heights upon the east of Toulouse, for Wellington had brought his army across the Garonne, was fought, with somewhat doubtful result, the great battle of Toulouse [April 10]. The victory has been claimed by both parties; the aim of the English general was however won, the Garonne was passed, the French position taken, Toulouse evacuated and occupied by the victors. The triumph such as it was had cost the victors 7,000 or 8,000 men, a loss of life which might have been spared, for Napoleon had already abdicated, and the battle was entirely useless."—J. F. A. D. 1813-1814 (December—May).—Restoration of Ferdinand and despotic government.—Abolition of the Cortes.—Re-establishment of the Inquisition.—Hostility of the people to freedom.—"The troops of the allies in Catalonia were paralyzed, when just about to take their last measures against Suchet, and, as they hoped, drive out the last of the French from Spain. An envoy arrived from the captive Ferdinand, with the news that Ferdinand and Napoleon had made a treaty, and that the Spaniards might not fight the French any more, nor permit the English to do so on their soil. Ferdinand had been a prisoner at Valençay for five years and a half; and during that time he had, by his own account, known nothing of what was doing in Spain, but from the French newspapers. The notion uppermost in his little mind at this time appears to have been that the Cortes and the liberal party in Spain were 'Jacobins and infidels,' and that it was all-important that he should return, to restore absolutism and the Inquisition. In sending to Spain the treaty he had made with Napoleon, he took no notice whatever of the Cortes, but addressed himself solely to the Regency: and with them, his business was to consult whether he should adhere to the treaty or break through it;—which he might easily do on the plea that it was an extorted act, agreed to under deficient knowledge of the state of Spain. Thus crooked was the policy, even at the moment of restoration, of the foolish prince who seems to have had no ability for any thing but mean and petty intrigue. The terms of the treaty might easily be anticipated from the circumstances under which it was made. Napoleon wanted to shake out the British from his southwestern quarter; he was

in great need of the veteran French troops who were prisoners in Spain: and he had no longer any hope of restoring his brother Joseph. The treaty of December, 1813, therefore provided that Ferdinand and his successors should be recognised as monarchs of Spain and of the Indies: that the territory of Spain should be what it had been before the war — the French giving up any hold they had there: that Ferdinand should maintain the integrity of this territory, clearing it completely of the British: that France and Spain should ally themselves to maintain their maritime rights against England: that all the Spaniards who had adhered to King Joseph should be reinstated in whatever they had enjoyed under him: that all prisoners on both sides should immediately be sent home: and that Joseph and his wife should receive large annuities from Spain. The General of the Spanish forces in Catalonia, Copons, was in so much haste to conclude a separate armistice for himself, with Suchet, without any regard to his British comrades, that the Cortes had to act with the utmost rapidity to prevent it. Since the Cortes had invested themselves with executive, as well as legislative power, the Regency had become a mere show: and now, when the Cortes instantly quashed the treaty, the Regency followed the example. On the 8th of January, the Regency let his Majesty know how much he was beloved and desired; but also, how impossible it was to ratify any act done by him while in a state of captivity. As Napoleon could not get back his troops from Spain in this way, he tried another. He released some of Ferdinand's chief officers, and sent them to him, with advocates of his own, to arrange about an end to the war, and exchanging prisoners; and General Palafox, one of the late captives, went to Madrid, where, however, he met with no better success than his predecessor. By that time (the end of January) it was settled that the Spanish treaty, whatever it might be, was to be framed under the sanction of the Allies, at the Congress of Chatillon. With the hope of paralyzing the Spanish forces by division, Napoleon sent Ferdinand back to Spain. He went through Catalonia, and arrived in his own dominions on the 24th of March. . . . These intrigues and negotiations caused extreme vexation to Wellington. They suddenly stopped every attempt to expel the French from Catalonia, and threatened to bring into the field against him all the prisoners he had left behind him in Spain: and there was no saying how the winding-up of the war might be delayed or injured by the political quarrels which were sure to break out whenever Ferdinand and the Cortes came into collision. . . . He therefore lost no time: and the war was over before Ferdinand entered Madrid. It was on the 14th of May that he entered Madrid, his carriage drawn by the populace. As he went through the city on foot, to show his confidence, the people cheered him. They were aware of some suspicious arrests, but were willing to hope that they were merely precautionary. Then followed the complete restoration of the religious orders to the predominance which had been found intolerable before; the abolition of the Cortes; and the re-establishment of the Inquisition. The Constitution had been rejected by the King before his entry into Madrid. In a few weeks, the whole country was distracted with discontent and fear; and, in a few months, the prisons of Madrid were so overflowing with state prisoners — ninety being arrested on one September night — that convents were made into prisons for the safe-keeping of the King's enemies. Patriots were driven into the mountains, and became banditti, while Ferdinand was making arrests right and left, coercing the press, and ceremoniously conveying to the great square, to be there burned in ignominy, the registers of the proceedings of the late Cortes." —H. Martineau, *Hist. of England*, 1800–1815, *bk.* 2, *ch.* 6.—"Ferdinand was a person of narrow mind, and his heart seems to have been incapable of generous feeling; but he was not a wicked man, nor would he have been a bad King if he had met with wise ministers, and had ruled over an enlightened people. On the two important subjects of civil and religious freedom he and the great body of the nation were in perfect sympathy, — both, upon both subjects, imbued with error to the core; and the popular feeling in both cases outran his. The word Liberty ('Libertad') appeared in large bronze letters over the entrance of the Hall of the Cortes in Madrid. The people of their own impulse hurried thither to remove it. . . . The Stone of the Constitution, as it was called, was everywhere removed. . . . The people at Seville deposed all the existing authorities, elected others in their stead to all the offices which had existed under the old system, and then required those authorities to re-establish the Inquisition. In re-establishing that accursed tribunal by a formal act of government, in suppressing the freedom of the press, which had been abused to its own destruction, and in continuing to govern not merely as an absolute monarch, but as a despotic one, Ferdinand undoubtedly complied with the wishes of the Spanish nation. . . . But, in his treatment of the more conspicuous persons among the 'Liberales,' whom he condemned to strict and long imprisonment, many of them for life, he brought upon himself an indelible reproach." —R. Southey, *Hist. of the Peninsular War, ch.* 46 (*v.* 6).

A. D. 1814-1827.—The Constitution of 1812. —Abrogated by Ferdinand.— Restored by the Revolution of 1820.— Intervention of the Holy Alliance.—Absolutism and bigotry reinstated by the arms of France.—"During the war and the captivity of Ferdinand, the Cortès had, in March 1812 established a new Constitution, by which the royal authority was reduced to little more than a name. . . . Ferdinand VII., after his return, immediately applied himself to restore the ancient régime in all its unmitigated bigotry and exclusiveness. He issued decrees, in May, 1814, by which all Liberals and Freemasons, and all adherents of the Cortès, and of the officers appointed by them, were either compelled to fly, or subjected to imprisonment, or at least deposed. All national property was wrested from the purchasers of it, not only without compensation, but fines were even imposed upon the holders. All dissolved convents were re-established. The Inquisition was restored, and Mir Capillo, Bishop of Almeria, appointed Grand Inquisitor, who acted with fanatical severity, and is said to have incarcerated 50,000 persons for their opinions, many of whom were subjected to torture. . . . Ten thousand persons are computed to have fled into France. The kingdom was governed by a Camarilla, consisting of the

King's favourites, selected from the lowest and most worthless of the courtiers. . . . The French invasion of Spain had occasioned a revolution in Spanish America [see ARGENTINE REPUBLIC: A. D. 1806–1820; COLOMBIAN STATES: A. D. 1810–1819; MEXICO: A. D. 1810–1819, and 1820–1826; CHILE: A. D. 1810–1818; PERU: A. D. 1820–1826]. The loss of the American colonies, and a bad system of rural economy, by which agriculture was neglected in favour of sheep-breeding, had reduced Spain to great poverty. This state of things naturally affected the finances; the troops were left unpaid, and broke out into constant mutinies. A successful insurrection of this kind, led by Colonels Quiroga and Riego, occurred in 1820. Mina, who had distinguished himself as a guerilla leader, but, having compromised himself in a previous mutiny, had been compelled to fly into France, now recrossed the Pyrenees to aid the movement. The Constitution of 1812 was proclaimed at Saragossa; and the cowardly Ferdinand . . . was also obliged to proclaim it at Madrid, March 8th 1820. The Cortès was convened in July, when Ferdinand opened the Assembly with an hypocritical speech, remarkable for its exaggeration of Liberal sentiments. The Cortès immediately proceeded again to dissolve the convents, and even to seize the tithes of the secular clergy, on the pretext that the money was required for the necessities of the State. The Inquisition was once more abolished, the freedom of the press ordained, the right of meeting and forming clubs restored. . . . The Spanish revolutionists were divided into three parties: the Decamisados, answering to the French 'Sans-culottes'; the Communeros, who were for a moderate constitutional system; and the Anilleros, known by the symbol of a ring; who, dreading the interference of the Holy Alliance, endeavoured to conciliate the people with the crown. On the whole, the insurgents used their victory with moderation, and, with the exception of some few victims of revenge, contented themselves with depriving their opponents, the Serviles, of their places and emoluments. . . . The revolution, though originated by the soldiery, was adopted by the more educated class of citizens. On the other hand, the clergy and the peasantry were bitterly opposed to it. In the summer of 1821, guerilla bands were organised in the provinces in the cause of Church and King, and obtained the name of 'Armies of the Faith.' . . . In these civil disturbances dreadful atrocities were committed on both sides. . . . The French Government, with the ulterior design of interfering in Spanish affairs, seized the pretext of this disorder to place a cordon of troops on the Pyrenees; to which the Spaniards opposed an army of observation. Ferdinand, relying on the Army of the Faith, and on his Foreign Minister, Martinez de la Rosa, a Moderado, thought he might venture on a coup d'état before the appearance of the French; but his guards were worsted in a street fight, July 7th 1822. . . . Ferdinand was now base enough to applaud and thank the victors, to dismiss the Moderados from the Ministry, and to replace them by Exaltados, or Radicals. This state of things had attracted the attention of the Holy Alliance. In October 1822, the three northern monarchs assembled in congress at Verona, to adopt some resolution respecting Spain [see VERONA: THE CONGRESS OF]. . . . They addressed a note to the Spaniards requiring the restoration of absolutism. . . . In the spring, the French army of observation, which had been increased to 100,000 men, was placed under the command of the Duke of Angoulême." The Spanish troops "were few and ill disciplined; while in Old Castile stood guerilla bands, under the priest Merino, ready to aid the French invasion. An attempt on the part of Ferdinand to dismiss his Liberal ministry induced the ministers and the Cortès to remove him to Seville (March 20th 1823), whither the Cortès were to follow. The Duke of Angoulême addressed a proclamation to the Spaniards from Bayonne, April 2nd, in which he told them that he did not enter Spain as an enemy, but to liberate the captive King, and, in conjunction with the friends of order, to re-establish the altar and the throne. The French crossed the Bidassoa, April 7th. The only serious resistance which they experienced was from Mina [in Catalonia]. Ballasteros [in Navarre] was not strong enough to oppose them, while the traitor O'Donnell [commanding a reserve in New Castile] entered into negociations with the enemy, and opened to them the road to the capital. Ballasteros was compelled to retire into Valencia, and the French entered Madrid, May 23rd. A Regency . . . was now instituted till the King should be rescued. . . . A French corps was despatched . . . against Seville, where the Cortès had reopened their sittings; but on the advance of the French they retired to Cadiz, June 12th, taking with them the King, whom they declared of unsound mind, and a provisional Regency was appointed." The French advanced and laid siege to Cadiz, which capitulated October 1st, after a bombardment, the Cortès escaping by sea. Mina, in Catalonia, gave up resistance in November. "The Duke of Angoulême returned to Paris before the end of the year, but Spain continued to be occupied by an army of 40,000 French. The first act of Ferdinand after his release was to publish a proclamation, October 1st, revoking all that had been done since March 7th 1820. The Inquisition, indeed, was not restored; but the vengeance exercised by the secular tribunals was so atrocious that the Duke of Angoulême issued an order prohibiting arrests not sanctioned by the French commander: an act, however, which on the principle of non-interference was disavowed by the French Government. . . . It is computed that 40,000 Constitutionalists, chiefly of the educated classes, were thrown into prison. The French remained in Spain till 1827. M. Zea Bermudez, the new Minister, endeavoured to rule with moderation. But he was opposed on all sides. . . . His most dangerous enemy was the Apostolic Junta, erected in 1824 for the purpose of carrying out to its full extent, and independently of the Ministry, the victory of bigotry and absolutism." In 1825, Bermudez was driven to resign. "The Junta . . . in the spring of 1827 excited in Catalonia an insurrection of the Serviles. The insurgents styled themselves Aggraviados (aggrieved persons), because the King did not restore the Inquisition, and because he sometimes listened to his half Liberal ministers, or to the French and English ambassadors, instead of suffering the Junta to rule uncontrolled. The history of the revolt is obscure. . . . The object seems to have been to dethrone Ferdinand in favour of his brother Carlos." The insurrection

was suppressed, "the provinces disarmed, and many persons executed."—T. H. Dyer, *Hist. of Modern Europe, bk. 8 (v. 4)*.

A. D. 1833.—Accession of Isabella II.

A. D. 1833-1846.—The civil war of Carlists and Christinos.—Abdication of Christina.—Regency of Espartero.—Revolution of 1843.—Accession of Queen Isabella.—Louis Philippe and his Spanish marriages.—"The eyes of King Ferdinand VII. were scarcely closed, september 29th, 1833, when the Apostolic party—whose strength lay in the north of Spain and especially in Navarre and the Basque provinces—proclaimed his brother Don Carlos king under the title of Charles V. In order to offer a successful resistance to the Carlists, who were fighting for absolutism and priestcraft, there was no other course for the regent Maria Christina than to throw herself into the arms of the Liberal party. So the seven years' war between Carlists and Christinos, from a war of succession, became a strife of principles and a war of citizens. At the outset, owing to the skill of General Zumalacarreguy, to whom the Carlists could oppose no leader of equal ability, the Carlists had the advantage in the field. Don Carlos likewise had the Spanish provinces from Portugal, where he had been living in exile with the last reigning Don Miguel. To this event Christina replied by England and France, and Portugal, these two states and Spain and Portugal concluded the quadruple alliance of April 22d, 1834, the aim of which was to uphold the constitutional interests of Isabella and Maria da Gloria, and to prevent the two pretenders, Carlos and Miguel. In that year both pretenders were obliged to a high degree the favor of the Polish and the European powers, had to leave Portugal. Carlos reached England on an English ship in June, but had again in July, and after a short stay, passed through France, appointed military governors to the provinces, and established his court in Navarre in presence. The war was carried on with passion and cruelty on both sides. After the death of Zumalacarreguy, on the plains of Bilbao, June 14th, 1835, the Christinos, who were superior in point of numbers, seemed to have the advantage. The turning point was reached when the command of the Christino army was committed to Espartero. He soon had pushed the Carlists in the northeastern corner of Spain. In 1837, when Carlos advanced upon the neighborhood of Madrid, he succeeded in the capital, and compelled him to retreat. The losses were added disunion in the Carlist camp. The utterly incapable, dependent pretender was the tool of his Camarilla, which made excellence in the catechism a more important requisite for the chief command than military science, and which deposed the most capable generals to put its own creatures in command. The new commander-in-chief, Guergué, said, bluntly, to Carlos, 'We, the blockheads and ignoramuses, have yet to conduct your Majesty to Madrid; and whoever does not belong in that category is a traitor.' This Apostolic hero was defeated several times by Espartero in 1838, and the enthusiasm of the northern provinces gradually cooled down. He was deposed, and the chief command intrusted to the cunning Maroto. . . . As he [Maroto] did not succeed in winning victories over Espartero, who overmatched him, he concluded, instead, August 31st, 1839, the treaty of Vergara, in accordance with which he went over to the Christinos, with his army, and by that means obtained full amnesty, and the confirmation of the privileges of Navarre and the Basque provinces. After this, Don Carlos's cause was hopelessly lost. He fled, in September, to France, with many of his followers, and was compelled to pass six years in Bourges under police supervision. In 1845, after he had resigned his claims in favor of his eldest son, the Duke of Montemolin, he received permission to depart, and went to Italy. He died in Trieste, March 10th, 1855. His followers, under Cabrera, carried on the war for some time longer in Catalonia. But they, too, were overcome by Espartero, and in July, 1840, they fled, about 8,000 strong, to France, where they were put under surveillance. The civil war was at an end, but the strife of principles continued. Espartero, who had been made Duke of Victory (Vittoria), was the most important and popular personage in Spain, with whom the regent, as well as everybody else, had to reckon. In the mean time Christina had contrived to alienate the respect and affection of the Spaniards, both by her private life and her political conduct. Her liberal paroxysms were not serious, and gave way, as soon as the momentary need was past, to the most opposite tendency. . . . In 1836 the Progressists apprehended a reaction, and sought to anticipate it. Insurrections were organized in the larger cities, and the constitution of 1812 was made the programme of the revolt. . . . Soldiers of the guard forced their way into the palace, and compelled [Christina] to accept the constitution of 1812. A constitutional assembly undertook a revision of this, and therefrom resulted the new constitution of 1837. Christina swore to it, but hoped, by controlling the elections, to bring the Moderados into the Cortes and the ministry. When she succeeded in this, in 1840, she issued a municipal ordinance placing the appointment of the municipal authorities in the hands of the administration. This occasioned riots in Madrid and other cities; and when Christina commissioned Espartero, who was just returning victorious, to suppress the revolt in Madrid, he refused to constitute himself the tool of an unpopular policy. But he was the only man who could hold in check the revolution which threatened to break out on all sides; and so, September 16th, 1840, he had to be named minister president. . . . Under such circumstances the regency had but little charm for Christina, and there were, more-

over, other causes working with these to the same result. Soon after the death of her husband, she had bestowed her favor on a young lifeguardsman named Munoz, made him her chamberlain, and been secretly married to him. This union soon published itself in a rich blessing of offspring, but it was not until the year 1844 that her public marriage with Munoz, and his elevation to the rank of duke (of Rianzares) and grandee of Spain took place. Having by this course of life forfeited the fame of an honest woman, and exposed herself to all sorts of attacks, she preferred to leave the country. October 12th, she abdicated the regency, and journeyed to France. May 8th, 1841, the newly elected Cortes named Espartero regent of Spain, and guardian of Queen Isabella and her sister, the Infanta Luisa Fernanda. . . . Since he knew how actively Christina, supported by Louis Philippe, was working against him with gold and influence, he entered into closer relations with England, whereupon his envious foes and rivals accused him of the sale of Spanish commercial interests to England. Because he quieted rebellious Barcelona by a bombardment in 1842, he was accused of tyranny. In 1843 new insurrections broke out in the south; Colonel Prim hastened to Catalonia, and set himself at the head of the soldiers whom Christina's agents had won over by a liberal use of money; Espartero's deadliest foe, General Narvaez, landed in Valencia, and marched into Madrid at the head of the troops. Espartero, against whom Progressists and Moderados had conspired together, found himself forsaken, and embarked at Cadiz, July 26th 1843, for England, whence he did not dare to return to his own country until 1848. In November, 1843, the thirteen-year-old Isabella was declared of age. She assumed the government, made Narvaez, now Duke of Valencia, minister president, and recalled her mother. Thereby gate and doors were opened to the French influence, and the game of intrigue and reaction recommenced. In 1845 the constitution of 1837 was altered in the interests of absolutism. . . . In order to secure to his house a lasting influence in Spain, and acquire for it the reversion of the Spanish throne, Louis Philippe, in concert with Christina, effected, October 16th, 1846, the marriage of Isabella with her kinsman Francis of Assis, and of the Infanta Luisa with the Duke of Montpensier, his own youngest son. (At first his plan was to marry Isabella also to one of his sons, the Duke of Aumale, but he abandoned it on account of the energetic protest of the Palmerston cabinet, and, instead, chose for Isabella, in Francis of Assis, the person who, by reason of his mental and physical weakness, would be least likely to stand in the way of his son Montpensier.) This secretly negotiated marriage cost Louis Philippe the friendship of the English cabinet."—W. Müller, *Political Hist. of Modern Times, sect.* 9.

A. D. 1866-1873.—Vices and misgovernment of Isabella.— Revolution of 1868.—Flight of the Queen.—Constitution of 1869.—Religious toleration.—Candidates for the vacant throne.—Election of Amadeo of Italy.— Unfriendliness of the nation to him.—His abdication.— "In January, 1866, occurred an insurrection headed by General Prim, a leading officer of the army, which, failing, caused his temporary exile. In June there originated in the barrack of San Gil, a few hundred yards from the palace, a more serious revolt, which extended over a great part of Madrid. In October of the same year the Ministry, in a public proclamation, alleged as a justification for an autocratic exercise of power, that 'revolutionary tendencies constituted an imposing organism with dangerous pretensions; that a rebellion adverse to the fundamental institutions of the country and the dynasty of Isabella, such as had never been seen in Spain, had obtained possession of important municipalities, and triumphed in the deputations from all the provinces,' and that it was necessary to dissolve the municipalities and renew the provisional deputations. . . . By this arbitrary assumption Spain was under as complete a despotism as existed in the neighboring empire of Morocco. The dissatisfaction at such maladministration, such abuses in the government, and the thinly disguised immoralities of the Queen, soon found expression in audible murmurs and severe criticism. These verbal protests were followed by machinations for the overthrow or control of a sovereign subject to ambitious priests and a venal coterie. Two exiles, Marshal Serrano and Marshal Prim, united with Admiral Topete at Cadiz, and began a revolution which soon had the sympathy and co-operation of a large part of the army and the navy. A provisional revolutionary junta of forty-one persons — a few others, notably Sagasta and Martos, were afterwards added — was appointed, which signed decrees and orders having the force and effect of laws. In less than a month Francisco Serrano was authorized by the junta to form a temporary ministry to rule the country until the Cortes should meet. The defeat of the royal troops near Alcolea prevented the return of Isabella to Madrid, and on September 30, 1868, she fled across the border into France. . . . With the flight of the Queen vanished for a time the parliamentary monarchy, and, despite her impotent proclamations from France, and offers of amnesty, a provisional government was at once established. A decree of the Government to take inventories of all the libraries, collections of manuscripts, works of art, or objects of historical value — a measure necessary to make useful and available these treasures, and to prevent spoliation and transfer — was peacefully executed except at Burgos. Here, under instigation of the priests and aided by them, a mob assembled, broke down the doors of the cathedral, assassinated the Governor, wounded the chief of police, and expelled those engaged in making the required examination and inventory. This outbreak, attributed to a clerical and Carlist conspiracy, awakened opposition and horror. A strong pressure was created for the immediate establishment of freedom of

worship. The atrocious butchery at Burgos aroused the inhabitants of the capital. The Nuncio was so imperilled by the excited populace that the diplomatic corps interposed for the safety and protection of their colleague. Marshal Serrano quieted the angry multitude gathered at his residence by saying that the Government had prepared the project of a constitution to be submitted to the Constitutional Assembly, one of whose first articles was liberty of worship. On February 12, 1869, the Constitutional Cortes convoked by the Provisional Government, assembled with unusual pomp and ceremony and with striking demonstrations of popular enthusiasm. . . . The Republicans, among whom the eloquent Castelar was influential, were a compact phalanx, and to them the independent Progresistas, led by General Prim, made overtures which were accepted. On Sunday June 5, 1869, the Constitution was promulgated. . . . While recognizing the provinces and endowing them with important functions, the Cortes rejected the plan of a federal republic, and adhered to the monarchical form of government as corresponding with and a concession to Spanish traditions, and as most likely to secure a larger measure of the liberal principles of the revolution. The Constitution, the legitimate outgrowth of that popular uprising, recognized the natural and inherent rights of man, and established an elective monarchy. . . . Congress was chosen by universal suffrage. The provincial assemblies and the municipal authorities were elected by the people of their respective localities. The ancient privileges of the aristocracy were annulled, and the equality of all men before the law was recognized. . . . The Clerical party claimed the continued maintenance of the Roman Catholic Church and the exclusion of all other worship, but the country had outgrown such intolerance. . . . The Catholic form of faith was retained in the organic law as the religion of the State, but a larger liberty of worship was secured to the people. In Article XXI. the Catholic Apostolic Roman religion was declared the State religion, and the obligation to maintain its worship and ministers was imposed. Foreigners were granted toleration for public and private worship under the limitations of the universal rules of morals and right, and Spaniards, even, professing another than the Catholic religion were to have the like toleration. . . . Spain quietly passed from the anomalous condition of a provisional into a regular constitutional government, the title of Provisional Government having been changed to that of Executive Power. In June a regency was established, and Serrano was chosen by a vote of 193 to 45. From June 16, 1869, the date of Prim's first cabinet, until December 27, 1870, when he was shot [as he rode through the street, by assassins, who escaped], he had four separate ministries besides several changes of individual ministers; and this instability is characteristic of Spanish politics. . . . For the vacant throne some Spaniards turned to the Duke of Montpensier; some to the Court of Portugal, and in default thereof to the house of Savoy. . . . At the moment of greatest embarrassment, the candidature of Leopold, Prince of Hohenzollern, was proposed [— a proposal which led to the Franco-German war: see FRANCE: A. D. 1870 (JUNE — JULY)]. . . . Leopold's declension was a welcome relief. His candidacy being removed, the strife for the throne became fiercer. On November 3, 1870, General Prim announced to the Cortes the Duke of Aosta, son of Victor Emmanuel, as the Ministerial candidate for the crown. Castelar impetuously denounced the attempt to put a foreigner over Spaniards. On the 15th, Amadeo was elected king, receiving on a vote by ballot a majority of seventy-one of those present and a majority of eighteen in a full house. . . . The choice excited no enthusiasm, elicited no applause, nor was a viva given by the multitude outside the building where the Cortes had made a sovereign. Thirty thousand troops, discreetly posted in principal thoroughfares, prevented any hostile demonstration, and the leading Republicans, Figueras, Castelar, and Piyy Margall, advised against any acts of violence. Many journals condemned the Cortes. Grandees protested, placards caricatured and ridiculed. . . . Nevertheless, Zorrilla went to Italy to make the formal tender of the crown, and on January 2, 1871, the prince reached Madrid and took the prescribed oaths of office in the presence of the regent, the Cortes, and the diplomatic corps. The ceremony was brief and simple. The reception by the populace was respectful and cold. The Provisional Government resigned, and a new ministry was appointed, embracing such men as Serrano, Martos, Moret, Sagasta, and Zorrilla. . . . Amadeo never had the friendship of the Carlists nor of the simon-pure Monarchists. The dynasty was offensive to the adherents of Don Carlos and of Alfonso, and to the Republicans, who were opposed to any king. . . . Becoming [after two years] convinced that the Opposition was irreconcilable, that factions were inevitable, that a stable ministry was impossible, Amadeo resolved on the singular course of abdicating the royal authority, and returning to the nation the powers with which he had been intrusted;" and this abdication he performed on the 11th of February, 1873.—J. L. M. Curry, *Constitutional Government in Spain, ch.* 3-4.

A. D. 1873-1885.—Reign of Alphonso XII., son of Queen Isabella.—On the abdication of King Amadeo, "a republic was declared by the Cortes, and the gifted and eminent statesman, Castelar, strove to give it a constitutional and conservative character. But during the disorders of the last few years the Basque provinces of Navarre and Biscay had been in a ferment excited by the Carlists. The grandson of the Don Carlos who had troubled Spain from 1833 to 1839 appeared in those provinces which were still favourable to his cause, and this ardent young champion of divine right of course received the support of French legitimists. On the other hand, the doctrines of the Paris Commune had found in the south of Spain many adherents, who desired that their country should form a federation of provincial republics. Malaga, Seville, Cadiz, Cartagena, and Valencia revolted, and were reduced only after sharp fighting. A group of generals then determined to offer the crown to Alphonso, the young son of Isabella II, in whose favour she had abdicated in 1868. Castelar, the moderate republican statesman, reluctantly consented, and young Alphonso XII, on landing in Spain, 1874, received the support of most republicans and Carlists, disgusted by the excesses of their extreme partisans. His generals gradually hemmed

in the Carlists along the north coast by battles near Bilbao and Irun; and when the rebels shot a German subject Prince Bismarck sent German ships to aid the Alphonsists. These in the spring of 1876 forced Don Carlos and most of his supporters to cross the French frontier. The Madrid Government now determined to put an end to the fueros or local privileges of the Basque provinces, which they had misused in openly preparing this revolt. So Biscay and Navarre henceforth contributed to the general war expenses of Spain, and their conscripts were incorporated with the regular army of Spain. Thus the last municipal and provincial privileges of the old Kingdom of Navarre vanished, and national unity became more complete in Spain, as in every other country of Europe except Austria and Turkey. The Basque provinces resisted the change which placed them on a level with the rest of Spain, and have not yet become reconciled to the Madrid Government. The young King, Alphonso XII, had many other difficulties to meet. The government was disorganised, the treasury empty, and the country nearly ruined; but he had a trusty adviser in Canovas del Castillo, a man of great prudence and talent, who, whether prime minister or out of office, has really held power in his hands. He succeeded in unifying the public debt, and by lowering its rate of interest he averted State bankruptcy. He also strove to free the administration from the habits of bribe-taking which had long enfeebled and disgraced it; but in this he met with less success, as also in striving for purity of parliamentary election. . . . The Senate is composed of (1) nobles, (2) deputies elected by the corporations and wealthy classes, and (3) of life senators appointed by the crown. The Chamber of Deputies is elected by universal suffrage, one deputy for every 50,000 inhabitants. The king or either House of Parliament has the right of proposing laws. In 1883 King Alphonso paid a visit to Berlin, and was made honorary colonel of a Uhlan regiment. For this he was hooted and threatened by the Parisians on his visit to the French capital; and this reception increased the coldness of Spain toward the French, who had aggrieved their southern neighbour by designs on Morocco. The good understanding between Spain and Germany was overclouded by a dispute about the Caroline Islands in the Pacific, which Spain rightly regarded as her own. This aggravated an illness of Alphonso, who died suddenly (November 25, 1885). His young widow, as queen-regent for her infant child, has hitherto [1889] succeeded with marvellous tact."—J. H. Rose, *A Century of Continental History, ch.* 43.

A. D. 1885-1894.—Alphonso XIII.—At the time of this writing (November, 1894), the queen-regent, Maria Christina, is still reigning in the name of her young son, Alphonso XIII.

SPANISH COINS.—"The early chroniclers make their reckonings of values under different names at different times. Thus during the discoveries of Columbus we hear of little else but 'maravedis'; then the 'peso de oro' takes the lead, together with the 'castellano'; all along 'marco' and 'ducado' being occasionally used. At the beginning of the 16th century, and before and after, Spanish values were reckoned from a mark of silver, which was the standard. A mark was half a pound either of gold or silver. The gold mark was divided into 50 castellanos; the silver mark into eight ounces. In the reign of Ferdinand and Isabella the mark was divided by law into 65 'reales de vellon' of 34 maravedis each, making 2,210 maravedis in a mark. . . . In the reign of Alfonso XI., 1312–1350, there were 125 maravedis to the mark, while in the reign of Ferdinand VII., 1808–1833, a mark was

divided into 5,440 maravedis. In Spanish America a 'real' is one-eighth of a 'peso,' and equal to 2½ reales de vellon. The peso contains one ounce of silver; it was formerly called 'peso de ocho reales de plata,' whence came the term 'pieces of eight,' a vulgarism at one time in vogue among the merchants and buccaneers in the West Indies. . . . The castellano, the one fiftieth of the golden mark, in the reign of Ferdinand and Isabella, was equivalent to 490 maravedis of that day. The 'peso de oro,' according to Oviedo, was exactly equivalent to the castellano, and either was one third greater than the ducado or ducat. The 'doblon'. . . was first struck by Ferdinand and Isabella as a gold coin of the weight of two castellanos. The modern doubloon is an ounce of coined gold, and is worth 16 pesos fuertes. Reduced to United States currency, the peso fuerte, as slightly alloyed bullion, is in weight nearly enough equivalent to one dollar. Therefore a mark of silver is equal to 8 dollars; a piece of eight, equal to one peso, which equals one dollar; a real de vellon, 5 cents; a Spanish-American real, 12½ cents; a maravedi, $\frac{100}{2778}$ of a cent; a castellano, or peso de oro $2.56; a doubloon $5.14; a ducat, $1.92; a mark of gold $128, assuming the United States alloy. The fact that a castellano was equivalent to only 490 maravedis shows the exceedingly high value of silver as compared with gold at the period in question."—H. H. Bancroft, *Hist. of the Pacific States, v.* 1, *pp.* 192–193, *foot-note.*

SPARTA: The City.—Its situation, origin and growth.—Laconia.—"Hollow Lacedæmon."—"Laconia is formed by two mountain-chains running immediately from Arcadia [from the center to the southeastern extremity of Peloponnesus], and enclosing the river Eurotas, whose source is separated from that of an Arcadian stream by a very trifling elevation. The Eurotas is, for some way below the city of Sparta, a rapid mountain-stream; then, after forming a cascade, it stagnates into a morass; but lower down it passes over a firm soil in a gentle and direct course. Near the town of Sparta rocks and hills approach the banks on both sides, and almost entirely shut in the river both above and below the town: this enclosed plain is without doubt the 'hollow Lacedæmon' of Homer."—C. O. Müller, *Hist. and Antiq. of the Doric Race, bk.* 1, *ch.* 4.—Upon the Dorian invasion and occupation of Peloponnesus (see DORIANS AND IONIANS) the city and neighborhood of Sparta in Laconia,—i. e. Sparta and 'hollow Lacedæmon,'—became the seat of the dominant state which they founded in the peninsula. The conquerors, themselves, and their descendants, were the only full citizens of this Spartan state and were called Spartiatæ or Spartans. The prior inhabitants of the country were reduced to political dependence, in a class called the Periœci, or else to actual serfdom in the more degraded class known as Helots. "Sparta was not, like other towns of the Greeks, composed of a solid body of houses, but, originally in a rural and open situation on the river and its canals, it gradually stretched out into the open country, and Dorians lived far beyond Sparta along the entire valley, without the inhabitants of remoter points being on that account in any less degree citizens of Sparta than those dwelling by the ford of the Eurotas. They were all Spartans, as by a stricter term they were called, as distinguished from the Lacedæmonians. . . . Strictly apart from this exclusive community of Spartiatæ there remained, with its ancient conditions of life intact, the older population of the land, which dwelt scattered on the mountains surrounding the land of the Spartiatæ on all sides (hence called the dwellers-around, or Periœci). More than trebling the Spartiatæ in number, they cultivated the incomparably less remunerative arable land of the mountains, the precipitous declivities of which they made available by means of terraced walls for cornfields and vineyards. . . . Free proprietors on their own holdings, they, according to primitive custom, offered their tribute to the kings. The country people, on the other hand, residing on the fields of the Spartiatæ, met with a harder fate. Part of them probably consisted of peasants on the domains; others had been conquered in the course of internal feuds. They were left on the fields which had been once their own, on the condition of handing over to the Spartiatæ quartered upon them an important portion of their produce. This oppression provoked several risings; and we must assume that the ancient sea-town of Helos was for a time the centre of one of these outbreaks. For this is the only admissible explanation of the opinion universally prevailing among the ancients, that from that town is derived the name of the Helots."—E. Curtius, *Hist. of Greece, v.* 1, *bk.* 2, *ch.* 1.

ALSO IN: G. F. Schömann, *Antiq. of Greece: The State, pt.* 3, *ch.* 1.

The Constitution ascribed to Lycurgus.—"Sparta was the city from which the Dorians slowly extended their dominion over a considerable portion of Peloponnesus. Of the progress of her power we have only the most meagre information. . . . The internal condition of Sparta at this early period is uniformly

described as one of strife and bad government, a condition of affairs which was certainly unfavourable to external development and conquest. Herodotus attributes these dissensions, at least in part, to the mutual animosity of the two royal families; the twin sons of Aristodemus quarrelled all their lives, and their descendants after them did the same. Plutarch, on the other hand, speaks of quarrels between the kings and the people. . . . Whatever the cause, it is more certain than any other fact in early Spartan history that the condition of the country was for a long time one of internal strife and dissension. It was the great merit of Lycurgus to have put an end to this disastrous state of affairs. Lycurgus is the foremost name in Spartan history. Tradition is nearly unanimous in describing this lawgiver as the author of the prosperity of Sparta, and the founder of her peculiar institutions, but about the date and the events of his life the greatest uncertainty prevailed. . . . Thucydides, though he does not mention Lycurgus, asserts that the form of the government had continued the same in Sparta for more than four hundred years before the end of the Peloponnesian war. In his opinion, therefore, the reforms of Lycurgus were introduced shortly before 804 B. C. This date is considerably later than that usually given to Lycurgus, on the authority of the ancient chronologers. . . . Herodotus tells us that Lycurgus, when visiting the Delphic shrine, was hailed by the priestess as a being more than human, and some authorities asserted that the Spartan institutions were revealed to him there. The Lacedaemonians, however, regarded Crete as the source of their peculiar arrangements [see CRETE]. They were thus enabled to connect them with the great name of Minos, and derive their authority from Zeus himself. . . . Plutarch has fortunately transcribed the text of the Rhetrae, or ordinances, which were given to Lycurgus at Delphi. There does not seem to be any reason to doubt that these were the oldest ordinances known at Sparta, or that they formed the basis of their 'good government.' They were therefore the oldest political ordinances known in Hellas, and, indeed, in the world. 'Found a temple to Zeus Hellanius, and Athena Hellania, arrange the tribes, and the Obes, thirty in number, establish the Gerousia with the Archagetae. Summon the people for meeting from time to time between Babyca and the Cnacion, there bring forward and decide (reject). The people are to have the supreme power.' Thus the first duty of the lawgiver was to found a public sanctuary which should be as it were the centre of the community. Then the people were to be arranged in tribes and Obes. The division into tribes was not a new one; from the first the Dorians at Sparta, as elsewhere, when free from the admixture of external elements, were divided into three tribes, Hylleis, Dymanes, Pamphyli, but it is possible that some changes were now introduced, regulating the internal arrangement of the tribe. In each tribe were ten Obes, of which we know nothing beyond the name. They appear to have been local divisions. As the Gerousia [see GERUSIA], including the kings, contained thirty members, we may conjecture that each Obe was represented in the Senate, and therefore that the two kings were the representatives of two distinct Obes. The Archagetae are the kings, or leaders of the people. From time to time the community were to be summoned to a meeting. . . . Before the assembled people measures were to be introduced that they might decide upon them, for no measure was valid which had not received the sanction of the whole people. The elements with which these ordinances deal — the Kings, the Council and the Assembly — appear in the Homeric poems, and grew naturally out of the patriarchal government of the tribe. The work of Lycurgus did not consist in creating new elements, but in consolidating those which already existed into a harmonious whole. . . . Three other ordinances which are ascribed to Lycurgus forbade (1) the use of written laws; (2) the use of any tools but the axe and saw in building a house; (3) frequent wars upon the same enemies. He is also said to have forbidden the use of coined money in Sparta. Neither gold nor silver was to be used for purposes of exchange, but bars of iron, which by their small value and great bulk rendered money dealings on any large scale impossible. The iron of these bars was also made unusually brittle in order that it might be useless for ordinary purposes. Such precepts were doubtless observed at Sparta, though they may not have been derived from Lycurgus. The training which every Spartan underwent was intended to diminish the sphere of positive law as much as possible, and to encourage the utmost simplicity and even rudeness of life. . . . About a century after Lycurgus, in the reign of Theopompus, two changes of great importance were made in the Spartan constitution. The veto which the earlier rhetra had allowed to the assembled people was cancelled, and a new law was introduced, which gave the ultimate control to the Gerontes and Kings. 'If the people decide crookedly, the elders and chiefs shall put it back,' i. e. shall reverse the popular decision. Under what circumstances this ordinance, which is said to have been obtained from Delphi, was passed, we do not know, nor is it quite clear how it consists with what we find recorded of the constitutional history of Sparta in later times. . . . The second innovation was even more important. Though Herodotus ascribes the institution of the Ephoralty [see EPHORS] to Lycurgus, it seems more correct to follow Aristotle and others in ascribing it to Theopompus. The Ephors, who were five in number, appear in the first instance to have been of no great importance. But as they were intimately connected with the commons, elected from and by them as their representatives, we must assume that the ephoralty was a concession to the people, and it may have been a compensation for the loss of the right of voting in the assembly. In time the ephors grew to be the most important officers in the state, both in war and in peace. They were associated with the council, they presided in the assembly, and even the kings were not exempt from their power. To this result the growing dread of 'a tyrannis,' like that at Corinth or Sicyon, and the increasing importance of the Spartan training, which the ephors superintended, in a great measure contributed. . . . The kings were the leaders of the army. For a time they always took the field together, but owing to the dissensions of Cleomenes and Demaratus, a law was passed that one king only should go out with the army, and it was henceforth the custom for one king only to be absent from Sparta, at a

time. The kings had the right of making war on whom they would, and no one could prevent them, on pain of being under a curse, but as they were liable to be brought to trial on their return for failure in an expedition, they usually obtained the consent of the ephors or the assembly before going. . . . The origin of the dual monarchy, which from the first was so distinctive a feature of the Spartan government, is very obscure, and many attempts have been made to explain it. It may have arisen by a fusion of the native and immigrant races, each of which was allowed to retain its own prince in the new community. . . . It is perhaps more reasonable to assume that the two kings represent two leading families, each of which had a claim to give a chief to the community. That two families holding equal rights should be regarded as descended from the twin sons of the Dorian founder of Sparta is merely one of the fictions which [illegible] arose in the period when all political unions and arrangements were expressed in the terms of genealogical connection. . . . The Apella was an assembly of all the Spartan citizens who had reached the age of thirty years. . . . In historical times it was presided over by the ephors. No speaking was allowed except by officers of State and persons duly invited, and perhaps the Senators. The votes were given by acclamation. The assembly decided on war and peace, treaties, and foreign politics generally; it elected the ephors and gerontes. . . . More important for the development of Sparta than her political constitution was the education and training which her citizens received. . . . The Spartan did not exist for himself but for his city; for her service he was trained from birth, and the most intimate relations of his life were brought under her control. In the secluded valley of the Eurotas, where till the time of Epaminondas no invader ever set foot, amid profound peace, he nevertheless led the life of a warrior in the field. His strength and endurance were tested to the utmost; he was not permitted to surrender himself to the charm of family life and domestic affections. Even when allowed to marry, he spent but little time at home; his children, if thought worthy of life, were taken from him at an early age to go through the same training in which he himself had been brought up. Only when he reached the age of sixty years, at which he could no longer serve his country in the field, was he permitted to enjoy the feeling of personal freedom."—E. Abbott, *Hist. of Greece*, [illegible]

[illegible] *Hist. of Greece, pt.* 2, *ch.* [illegible]—[illegible] *Hist. of Greece, bk.* 1, *ch.* 5.—C. O. Müller, *Hist. and Antiquities of the Doric Race, bk.* 3 (*v.* 2).

B. C. 743-510.—The First and Second Messenian Wars.—Military supremacy in Peloponnesus established.—"The effect of the Lycurgean institutions was to weld the people of Sparta into what Grote well denominates a 'military brotherhood'—the most potent military [illegible] which at that time, and for long [illegible] in Greece or in the world. Had [illegible] ambition and ability been proportionate [illegible] difficult to doubt that the Lacedæmonians [illegible] have anticipated the career of the [illegible] their inability to produce really [illegible] statesmen, and the iron rigidity of their political system, placed in their path effectual barriers to the attainment of such grandeur. . . . The first object of their attacks was the neighbouring Dorian kingdom of Messenia. The friendship between the two peoples and their rulers had previously kept them on friendly terms. It was symbolized and expressed by joint sacrifices, annually celebrated at a temple in honour of Artemis which stood on the borders between the two countries, near the source of the river Neda. It was a quarrel that broke out at these annual rites which led to the outbreak of the first Messenian war, about 743 B. C. The circumstances of the quarrel were differently related by the two parties; but it resulted in the death of Teleclus, one of the Spartan kings. His subjects invaded Messenia to obtain redress. At first the struggle was of an indecisive character, but ultimately the Messenians were obliged to take refuge on the fortified mountain of Ithome, and all the rest of their country was overrun and conquered by their persistent enemies. After the war had lasted twenty years, the Messenian garrison was compelled to abandon Ithome, the fortifications of which were razed by the Spartans, and Messenia became part of the Lacedæmonian territory,—all its inhabitants who refused to submit being driven into exile. Pausanias and other ancient writers give long details of the events of this twenty years' struggle, the great hero of which was the Messenian king Aristomenes; but these details are as legendary as the exploits of the Homeric heroes, and all that is certainly known about the war is that it ended in the subjugation of Messenia. The severity and oppression with which the conquered people were ruled led them, about forty years later, to rise up in revolt, and another struggle of seventeen years' duration followed. In this, again, Aristomenes is represented as the Messenian leader, although he had put an end to his own life at the unsuccessful close of the former contest; and the later Hellenic writers tried to get over this impossibility by declaring that the Aristomenes of the second war must have been a descendant of the earlier hero bearing the same name. In the course of the war the Spartans suffered severely, as the Messenians had the support of other Peloponnesian communities—especially the Arcadians—who had begun to dread the strength and arrogance of the Lacedæmonians. Ultimately, however, the revolt was crushed, and from that time till the days of Epaminondas, Messenia remained a part of the Laconian territory [see MESSENIAN WARS, FIRST AND SECOND]. To Sparta it was an important acquisition, for the plain of the Pamisus was the most fertile district in Peloponnesus. The Spartans next became aggressive on the eastern and northern frontiers of their territory. Among the numerous independent communities of Arcadia, the two most important were Tegea and Mantinea, in the extreme east of the Arcadian territory. With these cities, especially the former, the Spartans had some severe struggles, but were not able to conquer them, though they established a dominant influence, and reduced them to the position of dependent allies. From Argos . . . the Lacedæmonians wrested, in the course of two centuries, the strip of territory between the Parnon range and the sea from Thyrea down to the Malean promontory. By the beginning of the 6th century B. C. they were masters of two-fifths of the whole area of Peloponnesus—a

territory of something more than 3,000 square miles. To modern notions, such a territory, which is smaller in extent than more than one Scottish county, seems utterly insignificant; but it sufficed to make Sparta the largest and strongest state in Hellas, and even at the pinnacle of her power she never made any further addition to her possessions in Peloponnesus. Protected from invasion by impregnable natural defences, and possessing a military discipline, a social and political unity, such as no other Grecian community could boast, the Lacedæmonians possessed peculiar advantages in the competition for the Hellenic leadership. . . . It was about the close of the 6th century B. C. that Sparta, having asserted her supremacy in Peloponnesus, began to take an active part in the affairs of the Hellenic communities outside the peninsula. . . . In 510 B. C. her king, Cleomenes, went to Athens at the head of a large force to obey the mandate of the Delphic oracle and 'liberate the city' by the expulsion of the Pisistratids."—C. H. B. C. 404-403.— The organizing of Spartan supremacy.—The Harmosts in power.— The overthrow of Athenian power in the Greek world, made final by the battle of Ægospotami, B. C. 405, rendered Sparta supreme, and established her in a sovereignty of affairs which is often alluded to as the Spartan, or Lacedæmonian Empire. The cities which had been either allied or subject to Athens were now submissive to the Spartan conqueror, Lysander. "He availed himself of his strength to dissolve the popular system of government in all the towns which had belonged to the Attic confederation, and to commit the government to a fixed body of men enjoying his confidence. As at Athens the Thirty

[see ATHENS: B. C. 404–403], so elsewhere Commissions of Ten [called Dekarchies] were established; and in order to give security and strength to those governing bodies, detachments of Spartan troops were placed by their side, under the command of a Harmost. This measure, again, was, by no means a novel invention. From an early period the Lacedæmonians had been in the habit of despatching Harmostæ (i. e. military governors) into the rural districts, to hold sway over the Periœci, and to keep the latter in strict subjection to the capital. Such Harmosts were subsequently also sent abroad; and this, of itself, showed how the Spartans had no intention of recognizing various kinds of subjection, and how they at bottom designed to make no essential difference between subject rural communities in Laconia and the foreign towns which had of their own accord, or otherwise, submitted to the power of Sparta. The duration of the Harmosts' tenure of office was not defined."—E. Curtius, *Hist. of Greece, bk.* 5, *ch.* 1 (*v.* 4).

B. C. 317.—Building of Walls.—It was not until about the year 317 B. C., during the distractions which followed the death of Alexander the Great, that walls were built around the city of Sparta. "The maintenance of Sparta as an unwalled city was one of the deepest and most cherished of the Lykurgean traditions; a standing proof of the fearless bearing and self-confidence of the Spartans against dangers from without. The erection of the walls showed their own conviction, but too well borne out by the real circumstances around them, that the pressure of the foreigner had become so overwhelming as not to leave them even safety at home."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 96.

B. C. 272.—Siege by Pyrrhus.—Not many years after the walls of Sparta were first built the city was subjected to a siege by Pyrrhus, the ambitious Epirotic king. There were two claimants to the Spartan crown, and Pyrrhus, espousing the cause of the unsuccessful one, marched into Peloponnesus with a powerful army, (B. C. 272) and assailed the Lacedæmonian capital. He was repulsed and repulsed again, and gave up the attempt at last, marching away to Argos, where his interference in local quarrels had been solicited. He perished there, ignominiously, in another abortive enterprise, being killed by a tile flung down by a woman's hand, from a housetop overlooking the street in which he was attempting to manage the retreat of his discomfited forces.—C. SPARTACUS, The Rising of.—Schools for the training of gladiators, to supply the barbarous amusement which the Romans delighted in, were numerous at Rome and throughout Italy. The men placed in these schools were slaves, criminal prisoners, or unfortunates whose parents abandoned them in infancy. As a rule, they were forced into the brutal profession and the schools which trained them for it were places of confinement and restraint. From one of these schools, at Capua, some seventy or more gladiators escaped, in the year 73 B. C., and fled to the mountains. They had for their leader a Thracian, named Spartacus, who proved to be a soldier of remarkable ability and energy. Stationing himself at first on Mount Vesuvius, Spartacus was joined by other slaves and fugitives, until he had a large force under his command. Again and again the Roman armies sent against him were defeated and the insurgents equipped themselves with captured arms. Nola, Nuceria, and other towns in Southern Italy fell into their hands. In the year 72 they moved toward North Italy, routing two consular armies on their way, and were thought to be intending to escape beyond the Alps; but, after another great victory at Mutina (Modena) over the proconsul of Gallia Cisalpina, Spartacus turned southward again, for some unexplained reason, and allowed himself to be blockaded in the extremity of Lucania, by M. Licinius Crassus. In this situation he sought to make terms, but his proposals were rejected. He then succeeded in breaking through the Roman lines, but was pursued by Crassus and overwhelmingly defeated at Mount Calamatius, where 35,000 of the insurgents are said to have been slain. The flying remnant was again brought to bay near Petilia, in Bruttium, and there Spartacus ended his life. A few thousand of the insurgents who escaped from the field were intercepted by Pompey and cut to pieces, while 6,000 captives were crucified, with Roman brutality, along the road between Capua and Rome.—G. Long, *Decline of the Roman Republic, v.* 3, *ch.* 2.—See, also, ROME: B. C. 78–68.

SPEAKER OF THE HOUSE OF COMMONS.—"The splendor of the position of Speaker of the British House of Commons is perhaps not generally realized. The appointment, nominally for the duration of but one Parliament, generally extends over several. . . . Chosen from among the members, subject to the approval of the Crown, the Speaker can be re-

moved only upon an address to the Crown. Besides a palatial residence occupying one wing of the Houses of Parliament, and a large patronage, he receives a salary of £5,000 a year. At the end of his labors he is rewarded with a peerage and a pension of £4,000 per annum for two lives. He is a member of the Privy Council, and the first gentleman in the United Kingdom, taking rank after barons. . . . The wig and gown which he wears, the state and ceremony with which he is surrounded, doubtless contribute to the isolation and impressiveness of his position. . . . When, at the opening of proceedings, he makes his way in state from his residence to the Chamber, through the corridors used by members for passing to the committee, library, and refreshment rooms, it is against etiquette for any one to be found therein. When on summer evenings he and his family take the air upon the portion of the terrace which is outside his residence, there is no more thought of approaching them than there would be if he were a Grand Lama. When in the chair, he can be approached only upon strictly business matters. His levees, held twice a year and open to all members, can be attended only in court costume, sword by the side."—*The Nation, Aug.* 17, 1893 (*p.* 117).

SPHINX, The.—"About six hundred yards to the S. E. of the Great Pyramid is the Sphinx. The Sphinx is a natural rock, to which has been given, more or less accurately, the external appearance of that mystic animal. The head alone has been sculptured. The body is formed of the rock itself, supplemented, where defective, by a somewhat clumsy masonry of limestone. The total height of the monument is 19 metres 80 centimetres, equal to 65 English feet. The ear measures 6 feet 5 inches; the nose 5 feet 10 inches; and the mouth 7 feet 8 inches. The face, in its widest part, across the cheek, is 4 metres 15 centimetres, that is, 13 feet 7 inches. Its origin is still a matter of doubt. At one time it was supposed to be a monument of the reign of Thothmes IV. (XVIIIth dynasty). But we know now, thanks to a stone in the Boulak Museum, that the Sphinx was already in existence when Cheops (who preceded Chephren) gave orders for the repairs which this stone commemorates. . . . The Sphinx is the colossal image of an Egyptian god called Armachis."—A. Mariette, *Monuments of Upper Egypt, p.* 70.

STADIUM, OR STADE, The Greek.—"Throughout the present work I shall uniformly assume that the Greeks employed but one measure under that designation [the stadium] which was . . . a hundred fathoms, or 600 Greek feet. This has been proved, in my opinion, beyond a doubt, by Col. Leake in his paper 'On the Stade as a Linear Measure'. . . . republished in his treatise 'On some disputed Questions of Ancient Geography.' . . . At the present day the controversy may be considered as settled. . . . A stade of 600 Greek feet was in reality very nearly the 600th part of a degree [of the circumference of the earth]; ten stades are consequently just about equal to a nautical or geographical mile of 60 to a degree."—E. STALLER AND HORDERE, The.—"In the time of Ælfred [Alfred the Great] the great officers of the court were the four heads of the royal household, the Hordere, the Staller, the Dish-thegn, and the Cup-thegn. . . . The Hordere was the officer of the court in its stationery aspect, as the Staller or Constable was of the court on progress. . . . Of the four officers one only retained under the later West-Saxon monarchy any real power. The dish-thegn and cup-thegn lost importance as the court became stationary and no longer maintained a vast body of royal followers. The staller retained only the functions of leading in war as the feudal constable, which in turn passed away with later changes in the military system. The hordere alone held a position of growing importance. . . . No doubt the 'Hoard' contained not only money and coin, but the costly ornaments and robes of the crown."—J. R. Green, *Conquest of Eng., ch.* 10, *note.*—"The names by which the Chamberlain was designated are Hrægel thegn, literally thane or servant of the wardrobe, Cubicularius, Camerarius, Búrthegn, perhaps sometimes Dispensator, and Thesaurarius or Hordere. . . . We may presume that he had the general management of the royal property, as well as the immediate regulation of the household. . . . The Marshal (among the Franks Marescalcus and Comes stabuli) was properly speaking the Master of the Horse. . . . The Anglosaxon titles are Steallere [Staller] and Horsthegn, Stabulator and Strator regis."—J. M. Kemble, *The Saxons in Eng., bk.* 2, *ch.* 3.—See, also, Constable.

STALWARTS AND HALF-BREEDS.—During the administration of President Grant, certain leaders of the Republican party in the United States — conspicuous among them Senator Conkling of New York — acquired a control of the distribution of appointed offices under the Federal Government which gave them a more despotic control of the organization of their party than had been known before in the history of the country. It was the culminating development of the "spoils system" in American politics. It produced a state of things in which the organization of the party — its elaborated structure of committees and conventions — state, county, city, town and district,— became what was accurately described as a "political machine." The managers and workers of the machine were brought under a discipline which allowed no room for personal opinions of any kind; the passive adherents of the party were expected to accept what was offered to them, whether in the way of candidates or declarations of principle. The faction which controlled and supported this powerful machine in politics acquired the name of Stalwarts and contemptuously gave the name of Half-breeds to their dissatisfied Republican opponents. During the term of President Hayes, who favored Civil Service Reform, the Stalwarts were considerably checked. They had desired to nominate General Grant in 1876 for a third term, but found it unwise to press the proposition. In 1880, however, they rallied all their strength to accomplish the nomination of Grant at Chicago and were bitterly enraged when their opponents in the convention carried the nomination of Garfield. They joined in electing him, but Conkling, the Stalwart leader, speedily quarreled with the new President when denied the control of the Federal "patronage" (that is, official appointments) in New York State, resigned from the Senate, appealed to the New York Legislature for re-election, and was beaten. Then followed the tragedy of the assassination of President Garfield, which had a very sobering effect on the angry politics of the time. Conkling disappeared from public life, and Stalwartism subsided with him.—J. C. Ridpath, *Life and Work of James A. Garfield, ch.* 10–12.

Also in: E. Stanwood, *Hist. of Presidential Elections, ch.* 24–25.—J. Bryce, *The American Commonwealth, ch.* 60–65 (*v.* 2).

STAMBOUL.—"It must be remembered that the Constantinople of 1200 was only that portion which is now called Stamboul or Istamboul, a word which is probably the Turkish abbreviation of Constantinople, just as Skenderoun is the abbreviation of Alexandretta, Skender bey for Alexander bey, Isnik for Nicæa, Ismidt for Nicomedia, &c. . . . The 'Itinerario' of Clavigo states that before the Moslem occupation the inhabitants themselves called the city Escomboli. The Turks allow a few foreigners to have their warehouses in Stamboul, but will not permit them to reside there. All the embassies and legations are in Pera, that is, across the water; . . . or at Galata, which is a part of what was originally called Pera."—E. Pears, *The Fall of Constantinople, ch.* 7, *foot-note.*

STANDARD, The Battle of the (1138).—In the civil war which arose in England, on the death of Henry I., over the disputed succession to the throne, Matilda's claims, as the daughter of Henry, were supported against Stephen of Blois by her mother's brother David, king of Scotland. David, as the nephew of Edgar Ætheling, heir of the dethroned Saxon royal house, had some claims of his own to the English crown; but these he declared that he waived in favor of his niece. "Though he himself declared that he had no desire for the English throne, there is mentioned by one chronicler a general conspiracy of the native English with their exiled country-men, of whom the south of Scotland was full, for the purpose of taking advantage of the condition of the country to put to death the Normans, and to place the crown upon David's head. The plot was discovered, . . . and many of the conspirators were hanged, but many others found a refuge in Scotland. At length, in 1138, David entered England with a large army, and pushed forward as far as Northallerton in Yorkshire. He was there met by the forces of the Northern bishops and barons. . . . They gathered round a tall mast borne upon a carriage, on which, above the standards of the three Northern Saints, St. Peter of York, St. John of Beverley, and St. Wilfred of Ripon, was displayed a silver pyx bearing the consecrated wafer. The motley army of the Scots, some armed as the English, some in the wild dress of the Picts of Galloway, after a well-fought battle [August 22, 1138]

broke against the full-clad Norman soldiers, and were killed by the arrows, which had now become the national weapon of the English; 11,000 are said to have fallen on the field." From the great standard above described, the fight at Northallerton was called the Battle of the Standard.—J. F. Bright, *Hist. of Eng., period* 1, *p.* 79. —See ENGLAND: A. D. 1135–1154.

STAPLE.— STAPLERS, The.—"A term which makes a great figure in the commercial regulations of this period [13th and 14th centuries] is that of the Staple. The word, in its primary acceptation, appears to have meant a particular port or other place to which certain commodities were obliged to be brought to be weighed or measured for the payment of the customs, before they could be sold, or in some cases exported or imported. Here the king's staple was said to be established. The articles of English produce upon which customs were anciently paid were wool, sheep-skins (or woolfels), and leather; and these were accordingly denominated the staples or staple goods of the kingdom. The persons who exported these goods were called the Merchants of the Staple: they were incorporated, or at least recognized as forming a society with certain privileges." By a charter granted by Edward II., in 1313, to the merchants of the staple, Antwerp was made the staple for wool and woolfels, and they could be carried for sale to no other port in Brabant, Flanders or Artois. In 1326 the staple was removed altogether from the continent and fixed at certain places within the English kingdom. In 1341 it was established at Bruges; in 1348 at Calais (which the English had captured); in 1353 it was again removed entirely from the continent;—and thus the changes were frequent. During some intervals all staples were abolished and trade was set free from their restriction; but these were of brief duration.— G. L. Craik, *Hist. of British Commerce, ch.* 4 (*v.* 1).—"The staplers were merchants who had the monopoly of exporting the principal raw commodities of the realm, especially wool, woolfels, leather, tin, and lead; wool figuring most prominently among these 'staple' wares. The merchants of the staple used to claim that their privileges dated from the time of Henry III, but existing records do not refer to the staple before the time of Edward I. . . . The staples were the towns to which the above-mentioned wares had to be brought for sale or exportation. Sometimes there was only one such mart, and this was situated abroad, generally at Bruges or Calais, occasionally at Antwerp, St. Omer, or Middleburg. From the reign of Richard II until 1558 the foreign staple was at Calais. The list of home staples was also frequently changed."— C. Gross, *The Gild Merchant, pp.* 140–141.

ALSO IN: A. Anderson, *Hist. of Commerce, v.* 1, *p.* 216, *and after.*

STAR, Knights of the.—"On the 8th September, 1351, king John [of France] revived the almost obsolete order of the Star, in imitation of the Garter, and the first chapter of it was held at his palace of St. Ouen. At first there were but eighteen knights; the rest were added at different chapters. They wore a bright star on the crest of their helmets, and one pendant at their necks, and the same was embroidered on their mantles."—T. Johnes, *Note to Froissart's Chronicles, bk.* 1, *ch.* 152.

STAR CHAMBER, The Court of.—"In the reign of Edward III, the king's Continual Council was in the habit of sitting in what was called the Starred Chamber (la Chambre des Etoiles). After the establishment of the Court of Chancery as a separate and independent jurisdiction taking cognizance of the greater portion of the civil business of the Council, the latter body appears to have usually sat in the Star Chamber while exercising jurisdiction over such cases as were not sent to the Chancery. . . . Henry VII. . . . created, in the 3rd year of his reign, a new court, sometimes inaccurately called the Court of Star Chamber. . . . It continued to exist as a distinct tribunal from the Privy Council till towards the close of the reign of Henry VIII.; but in the meantime, probably during the chancellorship of Wolsey, the jurisdiction of the ancient Star Chamber (i. e. the Council sitting for judicial business) was revived, and in it the limited court erected by Henry VII. became gradually merged. . . . Under the Stewart Kings the court was practically identical with the Privy Council, thus combining in the same body of men the administrative and judicial functions. . . . Under the Stewart Kings the pillory, whipping, and cruel mutilations were inflicted upon political offenders by the sentence of this court; and at length the tyrannical exercise and illegal extension of its powers became so odious to the people that it was abolished by the Long Parliament in 1641."—T. P. Taswell-Langmead, *Eng. Const. Hist., pp.* 181–183.—"The Star Chamber was no temporary court. During 150 years its power penetrated into every branch of English life. No rank was exalted enough to defy its attacks, no insignificance sufficiently obscure to escape its notice. It terrified the men who had worsted the Armada; it overshadowed the dignity of the judicial bench; it summoned before its tribunal the Prynnes and the Cromwells, who at last proved its destroyers. It fell at length, but great was the fall thereof, and in its ruin was involved the downfall of the monarchy. It is with something of astonishment that the inquirer discovers that this august tribunal was merely the Council under another name; and that

the court, whose overgrown power the patriots of 1640 cast to the ground, was the same body whose early encroachments had alarmed the parliamentary leaders under Edward III and Richard II. The process by which the judicial authority of the Council passed into the form of the Court of Star Chamber admits of some dispute, and is involved in no little obscurity. . . . The Council's manner of proceeding was unlike that of other courts. Its punishments were as arbitrary as they were severe; it also exercised a power peculiar to itself of extorting confession by torture. Some, however, may imagine that powers so great were only occasionally exercised, that exceptional exertions of authority were employed to meet exceptional crimes, and that gigantic force was put forth to crush gigantic evils. . . . It is, indeed, perhaps not generally known, that crimes of a very ordinary nature, such as would now come before a police magistrate, occupied the attention of the Star Chamber."—A. V. Dicey, *The Privy Council, pt. 3, ch. 4.*

STAR OF INDIA, The Order of the.—An Order of Knighthood instituted by Queen Victoria, in 1861, to commemorate the assumption of the Government of India by the British Crown.

STAR ROUTE FRAUDS. Post routes on which the mails are carried by stages, wagons, post-riders, or by any other service than railway or steamer, are called "star routes," for the reason that the contracts made for them do not specify the method of carriage, but simply require the service to be performed with "celerity, certainty and security," which conditions are represented on the registers of the post office department by three stars. In 1878 it was found that an enormous system of fraud had been contrived in connection with certain of these routes (nearly 10,000 of which were then under contract), by a ring of public men, so numerous and influential that, though the frauds were broken up, no man was brought to punishment.

STATES-GENERAL OF FRANCE: In the 14th Century.—"I lately attempted to explain the manner in which the identity or union of the Royal Council and of the Parliament of Paris was virtually, though not formally dissolved [see PARLIAMENT OF PARIS], so that each of them thenceforward existed as a substantive and distinct body in the state. This tacit revolution had been nearly completed when Philip le Bel for the first time convened the States-General of France" (A. D. 1301). The circumstances under which this occurred were as follows: Philip had imposed a tax from which the clergy were not excepted. Pope Boniface issued a bull forbidding them to make the required payment. "Philip retaliated by an order forbidding them to pay the customary papal dues to Boniface himself. The Pope then summoned a synod, to advise him how he might most effectually resist this invasion of his pontifical rights; and Philip, in his turn, summoned the barons, clergy, and commons of his realm to elect deputies who should meet him at Paris, there to deliberate on the methods to be pursued for the successful conduct of his controversy with Rome. To Philip himself, the importance of this great innovation was probably not perceptible. He, as we may well believe, regarded it only as a temporary device to meet a passing exigency." Once more, before the end of his reign, in 1314, Philip assembled the States-General and procured their apparent assent to a tax, which proved to be exceedingly unpopular and which provoked a very turbulent resistance. The next meeting of the States-General,—called by King John—was in 1355, on the outbreak of the war with Edward III. of England. Under the lead of the celebrated Étienne (Stephen) Marcel, the States took matters on that occasion quite into their own hands. They created a commission to superintend the collecting of funds raised for the war, and they provided for an adjourned session in the following year to receive an accounting of the Expenditure. When the adjourned session took place, in 1356, King John was a prisoner in the hands of the English and his son Charles reigned as regent in his stead. This Charles, who became king in 1364, and who acquired the name of Charles the Wise, contrived to make the meeting of 1356 an abortive one and then endeavored to raise moneys and to rule without the help of the three estates. The result was an insurrection at Paris, led by Marcel, which forced the regent to convene the States-General once more. They met in 1357 under circumstances which gave them full power to check and control the royal authority, even to the extent of instituting a permanent commission, from their own membership, charged with a general superintendence of the administration of the government during the intervals between sessions of the States-General themselves. At that moment there would have seemed to be more promise of free government in France than across the channel. But the advantage which the national representatives acquired was brief. The taxes they imposed produced disappointment and discontent. They lost public favor; they fell into quarrels among themselves; the nobles and the clergy deserted the deputies of the people. The young regent gained influence, as the States-General lost it, and he was strengthened in the end by the violence of Marcel, who caused two offending ministers of the crown to be slain in the presence of the king. Then ensued a short period of civil war; Paris was besieged by the Dauphin-regent; Marcel perished by assassination; royalty recovered its ascendancy in France, with more firmness of footing than before. "It was the commencement of a long series of similar conflicts and of similar successes—conflicts and successes which terminated at length in the transfer of the power of the purse from the representatives of

the people to the ministers of the crown."—Sir J. Stephen, *Lect's on the Hist. of France, lect.* 10.—"The year 1357 was the period when the States-General had greatest power during the Middle Ages; from that time they rapidly declined; they lost, as did also the Third Estate, all political influence, and for some centuries were only empty shadows of national assemblies."—E. de Bonnechose, *Hist. of France, period* 4, *bk.* 2, *ch.* 3.—"One single result of importance was won for France by the states-general of the 14th century, namely, the principle of the nation's right to intervene in their own affairs, and to set the government straight when it had gone wrong or was incapable of performing that duty itself. . . . Starting from King John, the states-general became one of the principles of national right; a principle which did not disappear even when it remained without application, and the prestige of which survived even its reverses."—F. P. Guizot, *Popular Hist. of France, ch.* 21.

STEAM ENGINE: The beginning of its invention, before Watt.—"It is probable that the first contriver of a working steam-engine was Edward, second Marquis of Worcester [A. D. 1601–1667]. . . . He was born at London in 1601. His early years [when his title was Lord Herbert] were principally spent at Raglan Castle, his father's country seat, where his education was carefully attended to. . . . From an early period of his life Lord Herbert took especial pleasure in mechanical studies, and in the course of his foreign tours he visited and examined the famous works of construction abroad. On settling down at Raglan he proceeded to set up a laboratory, or workshop, wherein to indulge his mechanical tastes. . . . Among the works executed by Lord Herbert and his assistant at Raglan, was the hydraulic apparatus by means of which the castle was supplied with water. . . . It is probable that the planning and construction of these works induced Lord Herbert to prosecute the study of hydraulics, and to enter upon that series of experiments as to the power of steam which eventually led to the contrivance of his 'Water-commanding Engine.'" No description of the Marquis's engine remains which enables modern engineers to understand with certainty its principle and mode of working, and various writers "have represented it in widely different forms . . . . But though the Marquis did not leave the steam-engine in such a state as to be taken up and adopted as a practicable working power, he at least advanced it several important steps. . . . Even during the Marquis's lifetime other minds besides his were diligently pursuing the same subject. . . . One of the most distinguished of these was Sir Samuel Morland, appointed Master of Mechanics to Charles II. immediately after the Restoration. . . . Morland's inventions proved of no greater advantage to him than those of the Marquis of Worcester had done. . . . The next prominent experimenter on the powers of steam was Dr. Dionysius Papin." Being a Protestant, he was driven to England in 1681, four years before the Revocation of the Edict of Nantes, and received, through the friendship of Dr. Boyle, the appointment of Curator of the Royal Society. It was during this connection that he constructed his well-known "Digester," which was an apparatus for the cooking of meats under a high pressure and consequent high temperature of steam. For the safe employment of so high a pressure he invented the safety-valve. His success with the Digester led him to experiments with steam as a motive force. Having been invited to Germany, he made the attempt there to pump water by atmospheric pressure, on a large scale, producing the vacuum by a condensation of steam; but his undertakings were not successful. He next tried steam navigation, converting the alternate motion of a piston in a steam cylinder into rotary motion, turning paddle-wheels on the sides of a boat, by arming the piston-rods with

teeth, geared into wheels on the paddle axis. "His first experiments were doubtless failures;" but he finally succeeded to his satisfaction, and was conveying his model to London for exhibition, in 1707, when some barbarous boatmen in Germany destroyed it. Papin could raise no means for the construction of another, and three years later he died. "The attempts hitherto made to invent a working steam-engine, it will be observed, had not been attended with much success." But, "although the progress made seemed but slow, the amount of net result was by no means inconsiderable. Men were becoming better acquainted with the elastic force of steam. . . . Many separate and minor inventions, which afterwards proved of great value, had been made, such as the four-way cock, the safety-valve, and the piston moving in a cylinder. The principle of a true steam-engine had not only been demonstrated, but most of the separate parts of such an engine had been contrived by various inventors. It seemed as if all that was now wanting was a genius of more than ordinary power to combine them in a complete and effective whole. To Thomas Savery is usually accorded the merit of having constructed the first actual working steam-engine. . . . Thomas Savery was born at Shilston, . . . in Devon, about the year 1650. Nothing is known of his early life, beyond that he was educated to the profession of a military engineer. . . . He occupied much of his spare time in mechanical experiments, and in projecting and executing contrivances of various sorts." One of the earliest of these was a boat propelled by paddle-wheels, worked by man-power, turning a capstan, and this he exhibited on the Thames. "It is curious that it should not have occurred to Savery, who invented both a paddle-wheel boat and a steam-engine, to combine the two in one machine; but he was probably sick of the former invention . . . and gave it up in disgust, leaving it to Papin, who saw both his inventions at work, to hit upon the grand idea of combining the two in a steam-vessel. . . . It is probable that Savery was led to enter upon his next and most important invention by the circumstance of his having been brought up in the neighbourhood of the mining districts," and being well aware of the great difficulty experienced by the miners in keeping their pits clear of water." He devised what he called a "Fire Engine" for the raising of water. In this he made a double use of steam, in tight cylinders, first to create a vacuum, by condensing it, and then to force the water, so lifted, to a greater height, by pressure of fresh steam. "The great pressure of steam required to force up a high column of water was such as to strain to the utmost the imperfect boilers and receivers of those early days; and the frequent explosions which attended its use eventually led to its discontinuance in favour of the superior engine of Newcomen, which was shortly after invented. . . . This engine [of which the first working model was completed in 1705] . . . worked entirely by the pressure of the atmosphere, steam being only used as the most expeditious method of producing a vacuum," in a steam cylinder, under the piston which worked the rod of a pump. "The engine was, however, found to be very imperfect," until it was improved by a device for throwing a jet of cold water into the cylinder, to produce a more rapid condensation of steam. "Step by step, Newcomen's engine grew in power and efficiency, and became more and more complete as a self-acting machine."— S. Smiles, *Lives of Boulton and Watt, ch.* 1-4.—"We have . . . certain evidence that the Marquis of Worcester's Engine was in full operation for at least seven years, and that one of the conditions of the Act of Parliament obliged him to deposit a model in the Exchequer. His own estimate of its value may be judged by his gladly giving up for the promised tithe of it to the King, his claim on Charles I equal to £40,000, in lieu thereof. His Lordship's invention was never offered by him as a merely amusing trifle."— H. Dircks, *Life and Times of the Second Marquis of Worcester, p.* 337.

A. D. 1765-1785.—The improvements of James Watt.—After Newcomen, "no improvement of essential consequence . . . was effected in the steam engine until it came into the hands of Watt." James Watt, born at Greenock, Scotland, in 1736, educated to the profession of a mathematical instrument maker, and settled as such at Glasgow in 1757, began a few years later to give his thoughts to this subject. "Directing his attention first, with all his profound physical and mathematical knowledge, to the various theoretical points involved in the working of the machine, 'he determined,' says M. Arago, 'the extent to which the water dilated in passing from its liquid state into that of steam. He calculated the quantity of water which a given weight of coal could vaporise—the quantity of steam, in weight, which each stroke of one of Newcomen's machines of known dimensions expended—the quantity of cold water which required to be injected into the cylinder, to give the descending stroke of the piston a certain force—and finally, the elasticity of steam at different temperatures. All these investigations would have occupied the lifetime of a laborious philosopher; whilst Watt brought all his numerous and difficult researches to a conclusion, without allowing them to interfere with the labours of his workshop.'. . . Newcomen's machine laboured under very great defects. In the first place, the jet of cold water into the cylinder was a very imperfect means of condensing the steam. The cylinder, heated before, not being thoroughly cooled by it, a quantity of steam remained uncondensed, and, by its elasticity, impeded the descent of the piston, lessening the power of the stroke. Again, when the steam rushed into the cylinder from the boiler, it found the cylinder cold, in consequence of the water which had recently been thrown in; and thus a considerable quantity of steam was immediately condensed and wasted while the rest did not attain its full elasticity till the cylinder became again heated up to 212 degrees. These two defects . . . were sources of great expense. . . . Watt remedied the evil by a simple but beautiful contrivance—his separate condenser. The whole efficacy of this contrivance consisted in his making the condensation of the steam take place, not in the cylinder, but in a separate vessel communicating with the cylinder by a tube provided with a stop-cock. . . . So far the invention was all that could be desired; an additional contrivance was necessary, however, to render it complete. The steam in the act of being condensed in the separate vessel would give out its latent heat;

this would raise the temperature of the condensing water; from the heated water vapour would rise; and this vapour, in addition to the atmospheric air which would be disengaged from the injected water by the heat, would accumulate in the condenser, and spoil its efficiency. In order to overcome this defect, Watt attached to the bottom of the condenser a common air-pump, called the condenser pump, worked by a piston attached to the beam, and which, at every stroke of the engine, withdrew the accumulated water, air, and vapour. This was a slight tax upon the power of the machine, but the total gain was enormous—equivalent to making one pound of coal do as much work as had been done by five pounds in Newcomen's engine. This, certainly, was a triumph; but Watt's improvements did not stop here. In the old engine, the cylinder was open at the top, and the descent of the piston was caused solely by the pressure of the atmosphere on its upper surface. Hence the name of Atmospheric Engine, which was always applied to Newcomen's machine." Watt constructed his engine with the cylinder, closed at both ends, sliding the rod of the piston through a tightly packed hole in the metallic cover, introducing steam both above and below the piston,—but still using its expansive power only in the upper chamber, while in the lower it was employed as before to create a vacuum. "The engine with this improvement Watt named the Modified Engine; it was, however, properly, the first real steam engine; for in it, for the first time, steam, besides serving to produce the vacuum, acted as the moving force. . . . Another improvement less striking in appearance, but of value in economising the consumption of fuel, was the enclosing of the cylinder in a jacket or external drum of wood, leaving a space between which could be filled with steam. By this means the air was prevented from acting on the outside of the cylinder so as to cool it. A slight modification was also necessary in the mode of keeping the piston air-tight. . . . The purpose was . . . effected by the use of a preparation of wax, tallow, and oil, smeared on the piston-rod and round the piston-rim. The improvements which we have described had all been thoroughly matured by Mr. Watt before the end of 1765, two years after his attention had been called to the subject." Another two years had passed before he found the means to introduce his invention into practice. He formed a partnership at length with Dr. Roebuck, who had lately founded the Carron iron-works, near Glasgow. "A patent was taken out by the partners in 1769, and an engine of the new construction, with an eighteen-inch cylinder, was erected at the Kinneil coal-works [leased by Dr. Roebuck], with every prospect of complete success; when, unfortunately, Dr. Roebuck was obliged by pecuniary embarrassments to dissolve the partnership, leaving Watt with the whole patent, but without the means of rendering it available." For five years after this failure the steam-engine was practically put aside, while Watt devoted himself to civil engineering, which he had worked into as a profession. "At length, in 1774, Mr. Watt entered into a partnership most fortunate for himself and for the world. This was with Mr. Matthew Boulton, of the Soho Foundry, near Birmingham—a gentleman of remarkable scientific abilities, of liberal disposition and of unbounded enterprise." A prolongation of Watt's patent, which had nearly expired, was procured with great difficulty from Parliament, where a powerful opposition to the extension was led by Edmund Burke. The new engine, now fairly introduced, speedily supplanted Newcomen's, and Watt and his partner were made wealthy by stipulating with mine owners for one third part of the value of the coal which each engine saved. "The first consequence of the introduction of Watt's improved steam-engine into practice was to give an impulse to mining speculations. New mines were opened; and old mines . . . now yielded a return. This was the only obvious consequence at first. Only in mines, and generally for the purpose of pumping water was the steam-engine yet used; and before it could be rendered applicable to other purposes in the arts . . . the genius of Watt required once again to stoop over it, and bestow on it new creative touches." He produced the beautiful device known as the "parallel motion," for connecting the piston-rod of the engine with the beam through which its motion is transmitted to other pieces of machinery. "Another improvement, which, in point of the additional power gained, was more important than the parallel motion, and which indeed preceded it in point of time, was the 'Double-acting Engine,'" in which steam was introduced to act expansively on each side of the piston in the engine. He also invented the governor, to regulate the quantity of steam admitted from the boiler into the cylinder, and thus regulate the motion of the engine. "To describe all the other inventions of a minor kind connected with the steam-engine which came from the prolific genius of Watt, would occupy too much space." —*Life of James Watt* (*Chambers's Miscellany, v.* 17). — "The Watt engine had, by the construction of the improvements described in the patents of 1782–'85, been given its distinctive form, and the great inventor subsequently did little more than improve it by altering the forms and proportions of its details. As thus practically completed, it embodied nearly all the essential features of the modern engine. . . . The growth of the steam-engine has here ceased to be rapid, and the changes which followed the completion of the work of James Watt have been minor improvements, and rarely, if ever, real developments."—R. H. Thurston, *Hist. of the Growth of the Steam Engine, ch.* 3.

STEAM LOCOMOTION ON LAND.—The beginning of Railroads.—"The application of the steam engine to locomotion on land was, according to Watt, suggested by Robison, in 1759. In 1784, Watt patented a locomotive engine, which, however, he never executed. About the same time Murdoch, assistant to Watt, made a very efficient working model of a locomotive engine. In 1802, Trevithick and Vivian patented a locomotive engine, which was constructed and set to work in 1804 or 1805. It travelled at about five miles an hour, with a net load of ten tons. The use of fixed steam engines to drag trains on railways by ropes, was introduced by Cook in 1808. After various in-

ventors had long exerted their ingenuity in vain to give the locomotive engine a firm hold of the track by means of rackwork-rails and toothed driving wheels, legs, and feet, and other contrivances, Blackett and Hedley, in 1813, made the important discovery that no such aids are required, the adhesion between smooth wheels and smooth rails being sufficient. To adapt the locomotive engine to the great and widely varied speeds at which it now has to travel, and the varied loads which it now has to draw, two things are essential — that the rate of combustion of the fuel, the original source of the power of the engine, shall adjust itself to the work which the engine has to perform, and shall, when required, be capable of being increased to many times the rate at which fuel is burned in the furnace of a stationary engine of the same size; and that the surface through which heat is communicated from the burning fuel to the water shall be very large compared with the bulk of the boiler. The first of these objects is attained by the 'blast-pipe,' invented and used by George Stephenson before 1825; the second, by the tubular boiler, invented about 1829, simultaneously by Séguin in France and Booth in England, and by the latter suggested to Stephenson. On the 6th October, 1829, occurred that famous trial of locomotive engines, when the prize offered by the directors of the Liverpool and Manchester Railway was gained by Stephenson's engine, the 'Rocket,' the parent of the swift and powerful locomotives of the present day, in which the blast-pipe and tubular boiler are combined."— W. J. M. Rankine, *Manual of the Steam Engine, pp. xxv–xxvii.*— George Stephenson, the son of a common workingman, and self-educated as a mechanic and engineer, was appointed engine-wright of Killingworth Colliery in 1812. In the following year he urged the lessees of the colliery to undertake the construction of a "travelling engine," as he called it. "Lord Ravensworth, the principal partner, had already formed a very favourable opinion of Stephenson, from the important improvements which he had effected in the colliery engines, both above and below ground; and, after considering the matter, and hearing Stephenson's statements, he authorized him to proceed with the construction of a locomotive. . . . The engine was built in the workshops at the West Moor, the leading mechanic being John Thirlwall, the colliery blacksmith, an excellent workman in his way, though quite new to the work now entrusted to him. . . . The wheels of the new locomotive were all smooth,— and it was the first engine that had been so constructed. From the first, Mr. Stephenson was convinced that the adhesion between a smooth wheel and an edgerail would be as efficient as Mr. Blackett had proved it to be between the wheel and the tramroad. . . . The engine was, after much labour and anxiety, and frequent alterations of parts, at length brought to completion, having been about ten months in hand. It was first placed upon the Killingworth Railway on the 25th of July, 1814; and its powers were tried on the same day. On an ascending gradient of 1 in 450, the engine succeeded in drawing after it eight loaded carriages of 30 tons' weight at about four miles an hour; and for some time after, it continued regularly at work. It was indeed the most successful working engine that had yet been constructed. . . . The working of the engine was at first barely economical; and at the end of the year the steam power and the horse power were ascertained to be as nearly as possible upon a par in point of cost. The fate of the locomotive in a great measure depended on this very engine. Its speed was not beyond that of a horse's walk, and the heating surface presented to the fire being comparatively small, sufficient steam could not be raised to enable it to accomplish more on an average than about three miles an hour. The result was anything but decisive; and the locomotive might have been condemned as useless had not Mr. Stephenson at this juncture applied the steam blast [carrying the escape of steam from the cylinders of the engine into the chimney or smoke-stack of the furnace], and at once more than doubled the power of the engine." A second engine, embodying this and other improvements, was constructed in 1815, with funds provided by Mr. Ralph Dodds. "It is perhaps not too much to say that this engine, as a mechanical contrivance, contained the germ of all that has since been effected. . . . It is somewhat remarkable that, although George Stephenson's locomotive engines were in daily use for many years on the Killingworth railway, they excited comparatively little interest." But in 1821, Mr. Stephenson was employed to construct a line of railway from Witton Colliery, near Darlington, to Stockton, and to build three locomotives for use upon it. The Stockton and Darlington line was opened for traffic on the 27th of September, 1825, with great success. In 1826 the building of the Liverpool and Manchester Railway was begun, with George Stephenson as the chief engineer of the work, and the public opening of the line took place on the 15th of September, 1830. The directors had offered, in the previous year, a prize of £500 for the best locomotive engine to be designed for use on their road, and the prize was won by Stephenson's famous "Rocket," which attained a speed of 35 miles an hour. It was at the ceremonial of the opening of the Liverpool and Manchester Railway that Mr. Huskisson, then Prime Minister of England, was struck down by the "Rocket" and fatally injured, expiring the same night.— S. Smiles, *Life of George Stephenson, ch.* 9–24.— "Whatever credit is due to the construction of the first railroad ever built in America is usually claimed for the State of Massachusetts. Every one who has ever looked into a school history of the United States knows something of the Quincy railway of 1826. Properly speaking, however, this was never — or at least, never until the year 1871,— a railroad at all. It was nothing but a specimen of what had been almost from time immemorial in common use in England, under the name of 'tram-ways.' . . . This road, known as the Granite railway, built by those interested in erecting the Bunker Hill Monument, for the purpose of getting the stone down from the Quincy quarries to a wharf on Neponset River, from which it was shipped to its destination. The whole distance was three miles, and the cost of the road was about $34,000. . . . Apart, however, from the construction of the Granite railway, Massachusetts was neither particularly early nor particularly energetic in its railroad development. At a later day many of her sister States were in advance of her, and especially was this true of South Carolina. There is, indeed, some reason for believing that the

South Carolina Railroad was the first ever constructed in any country with a definite plan of operating it exclusively by locomotive steam power. . . . On the 15th of January 1831,—exactly four months after the formal opening of the Manchester & Liverpool road,—the first anniversary of the South Carolina Railroad was celebrated with due honor. A queer looking machine, the outline of which was sufficient in itself to prove that the inventor owed nothing to Stephenson, had been constructed at the West Point Foundry Works in New York during the summer of 1830—a first attempt to supply that locomotive which the Board had, with a sublime confidence in possibilities, unanimously voted on the 14th of the preceding January should alone be used on the road. The name of Best Friend was given to this very simple product of native genius. . . . In June, 1831, a second locomotive, called the West Point, had arrived in Charleston; and this at last was constructed on the principle of Stephenson's Rocket. In its general aspect, indeed, it greatly resembled that already famous prototype. There is a very characteristic and suggestive cut representing a trial trip made with this locomotive on March 5th, 1831. . . . About six months before . . . there had actually been a trial of speed between a horse and one of the pioneer locomotives, which had not resulted in favor of the locomotive. It took place on the present Baltimore & Ohio road upon the 28th of August, 1830. The engine in this case was contrived by no other than Mr. Peter Cooper. . . . The Cooper engine, however, was scarcely more than a working model. Its active-minded inventor hardly seems to have aimed at anything more than a demonstration of possibilities. The whole thing weighed only a ton, and was of one-horse power. . . . Poor and crude as the country was, however, America showed itself far more ready to take in the far reaching consequences of the initiative which Great Britain gave in 1830 than any other country in the world. . . . It might almost be said that there was a railroad mania. Massachusetts led off in 1826; Pennsylvania followed in 1827, and in 1828 Maryland and South Carolina. Of the great trunk lines of the country, a portion of the New York Central was chartered in 1825; the construction of the Baltimore & Ohio was begun on July 4th, 1828. The country, therefore, was not only ripe to accept the results of the Rainhill contest, but it was anticipating them with eager hope. . . . Accordingly, after 1830 trial trips with new locomotives followed hard upon each other. To-day it was the sensation in Charleston; to-morrow in Baltimore; the next day at Albany. Reference has already been made to a cut representing the excursion train of March 5th, 1831, on the South Carolina Railroad. There is, however, a much more familiar picture of a similar trip made on the 9th of August of the same year from Albany to Schenectady, over the Mohawk Valley road. This sketch, moreover, was made at the time and on the spot by Mr. W. H. Brown."—C. F. Adams, Jr., *Railroads: Their Origin and Problems, ch.* 1.

STEAM NAVIGATION, The beginnings.—"The earliest attempt to propel a vessel by steam is claimed by Spanish authorities . . . to have been made by Blasco de Garay, in the harbor of Barcelona, Spain, in 1543. . . . The account seems somewhat apochryphal, and it certainly led to no useful results. . . . In 1690, Papin proposed to use his piston-engine to drive paddle-wheels to propel vessels; and in 1707 he applied the steam-engine, which he had proposed as a pumping-engine, to driving a model boat on the Fulda at Cassel [see above — STEAM ENGINE THE BEGINNINGS, &c.]. . . . In the year 1736, Jonathan Hulls took out an English patent for the use of a steam-engine for ship-propulsion, proposing to employ his steamboat in towing. . . . There is no positive evidence that Hulls ever put his scheme to the test of experiment, although tradition does say that he made a model, which he tried with such ill-success as to prevent his prosecution of the experiment further. . . . A prize was awarded by the French Academy of Science, in 1752, for the best essay on the manner of impelling vessels without wind. It was given to Bernouilli, who, in his paper, proposed a set of vanes like those of a windmill —a screw in fact— one to be placed on each side the vessel and two more behind. . . . But a more remarkable essay is quoted by Figuier — the paper of l' Abbé Gauthier, published in the 'Memoires de la Société Royale des Sciences et Lettres de Nancy.'. . . A little later (1760), a Swiss clergyman, J. A. Genevois, published in London a paper relating to the improvement of navigation, in which his plan was proposed of compressing springs by steam or other power, and applying their effort while recovering their form to ship propulsion. It was at this time that the first attempts were made in the United States to solve this problem. . . . William Henry was a prominent citizen of the then little village of Lancaster, Pa., and was noted as an ingenious and successful mechanic. . . . In the year 1760 he went to England on business, where his attention was attracted to the invention — then new, and the subject of discussion in every circle — of James Watt. He saw the possibility of its application to navigation and to driving carriages, and, on his return home, commenced the construction of a steam-engine, and finished it in 1763. Placing it in a boat fitted with paddle-wheels, he made a trial of the new machine on the Conestoga River, near Lancaster, where the craft, by some accident, sank, and was lost. He was not discouraged by this failure, but made a second model, adding some improvements. Among the records of the Pennsylvania Philosophical Society is, or was, a design, presented by Henry in 1782, of one of his steamboats. . . . John Fitch, whose experiments will presently be referred to, was an acquaintance and frequent visitor to the house of Mr. Henry, and may probably have there received the earliest suggestions of the importance of this application of steam. About 1777 . . . Robert Fulton, then twelve years old, visited him, to study the paintings of Benjamin West, who had long been a friend and protégé of Henry. He, too, not improbably, received there the first suggestion which afterward . . . made the young portrait-painter a successful inventor and engineer. . . . In France, the Marquis de Jouffroy was one of the earliest to perceive that the improvements of Watt, rendering the engine more compact, more powerful, and, at the same time, more regular and positive in its action, had made it, at last, readily applicable to the propulsion of vessels. . . . Comte d'Auxiron and Chevalier Charles

Mounin, of Follenai, friends and companions of Jouffroy, were similarly interested, and the three are said to have . . . united in devising methods of applying the new motor. In the year 1770, D'Auxiron determined to attempt the realization of the plans which he had conceived. He resigned his position in the army," obtained from the King a patent of monopoly for fifteen years, and formed a company for the undertaking. "The first vessel was commenced in December, 1772. When nearly completed, in September, 1774, the boat sprung a leak, and, one night, foundered at the wharf." Quarrels and litigation ensued, D'Auxiron died, and the company dissolved. "The heirs of D'Auxiron turned the papers of the deceased inventor over to Jouffroy, and the King transferred to him the monopoly held by the former. . . . M. Jacques Périer, the then distinguished mechanic, was consulted, and prepared plans, which were adopted in place of those of Jouffroy. The boat was built by Périer, and a trial took place in 1774 [1775] on the Seine. The result was unsatisfactory." Jouffroy was still undiscouraged, and pursued experiments for several years, at his country home and at Lyons, until he had impoverished himself and was forced to abandon the field. "About 1785, John Fitch and James Rumsey were engaged in experiments having in view the application of steam to navigation. Rumsey's experiments began in 1774, and in 1786 he succeeded in driving a boat at the rate of four miles an hour against the current of the Potomac at Shepherdstown, W. Va., in presence of General Washington. His method of propulsion has often been reinvented since. . . . Rumsey employed his engine to drive a great pump which forced a stream of water aft, thus propelling the boat forward, as proposed earlier by Bernouilli. . . . Rumsey died of apoplexy, while explaining some of his schemes before a London society a short time later, December 23, 1793, at the age of 50 years. A boat, then in process of construction from his plans, was afterward tried on the Thames, in 1793, and steamed at the rate of four miles an hour. . . . John Fitch was an unfortunate and eccentric, but very ingenious, Connecticut mechanic. After roaming about until 40 years of age, he finally settled on the banks of the Delaware, where he built his first steamboat. . . . The machinery [of Fitch's first model] was made of brass, and the boat was impelled by paddle-wheels. . . . In September, 1785, Fitch presented to the American Philosophical Society, at Philadelphia, a model in which he had substituted an endless chain and floats for the paddle-wheels." His first actual steamboat, however, which he tried at Philadelphia in August, 1787, before the members of the Federal Constitutional Convention, was fitted with neither paddle-wheels nor floats, but with a set of oars or paddles on each side, worked by the engine. His second boat, finished in 1788, was similarly worked, but the oars were placed at the stern. This boat made a trip to Burlington, 20 miles from Philadelphia. "Subsequently the boat made a number of excursions on the Delaware River, making three or four miles an hour. Another of Fitch's boats, in April, 1790, made seven miles an hour. . . . In June of that year it was placed as a passenger-boat on a line from Philadelphia to Burlington, Bristol, Bordentown, and Trenton. . . . During this period, the boat probably ran between 2,000 and 3,000 miles, and with no serious accident. During the winter of 1790–'91, Fitch commenced another steamboat, the 'Perseverance,'" which was never finished. Although he obtained a patent from the United States, he despaired of success in this country, and went, in 1793, to France, where he fared no better. "In the year 1796, Fitch was again in New York City, experimenting with a little screw steamboat on the 'Collect' Pond, which then covered that part of the city now occupied by the 'Tombs,' the city prison. This little boat was a ship's yawl fitted with a screw, like that adopted later by Woodcroft, and driven by a rudely made engine. Fitch, while in the city of Philadelphia at about this time, met Oliver Evans, and discussed with him the probable future of steam-navigation, and proposed to form a company in the West." Soon afterwards, he settled on a land-grant in Kentucky, where he died in 1798. "During this period, an interest which had never diminished in Great Britain had led to the introduction of experimental steamboats in that country. Patrick Miller, of Dalswinton, had commenced experimenting, in 1786–'87, with boats having double or triple hulls, and propelled by paddle-wheels placed between the parts of the compound vessel." On the suggestion of James Taylor, he placed a steam-engine in a boat constructed upon this plan, in 1788, and attained a speed of five miles an hour. The next year, with a larger vessel, he made seven miles an hour. But for some reason, he pursued his undertaking no further. "In the United States, several mechanics were now at work besides Fitch. Samuel Morey and Nathan Read were among these. Nicholas Roosevelt was another. . . . In Great Britain, Lord Dundas and William Symington, the former as the purveyor of funds and the latter as engineer, followed by Henry Bell, were the first to make the introduction of the steam-engine for the propulsion of ships so completely successful that no interruption subsequently took place in the growth of the new system of water-transportation. . . . Symington commenced work in 1801. The first boat built for Lord Dundas, which has been claimed to have been the 'first practical steamboat,' was finished ready for trial early in 1802. The vessel was called the 'Charlotte Dundas,' in honor of a daughter of Lord Dundas. . . . Among those who saw the Charlotte Dundas, and who appreciated the importance of the success achieved by Symington, was Henry Bell, who, 10 years afterward, constructed the Comet, the first passenger-vessel built in Europe. This vessel was built in 1811, and completed January 18, 1812. . . . Bell constructed several other boats in 1815, and with his success steam-navigation in Great Britain was fairly inaugurated." Meantime this practical success had been anticipated by a few years in the United States, through the labors and exertions of Stevens, Livingston, Fulton, and Roosevelt. Fulton's and Livingston's first experiments were made in France (1803), where the latter was Ambassador from the United States. Three years later they renewed them in America, using an engine ordered for the purpose from Boulton & Watt. "In the spring of 1807 the 'Clermont,' as the new boat was christened, was launched from the ship-yard of Charles Brown, on the East River, New York. In August the machinery was on board and in successful operation.

The hull of this boat was 133 feet long, 18 feet wide, and 9 deep. The boat soon made a trip to Albany, running the distance of 150 miles in 32 hours running time, and returning in 30 hours. . . . This was the first voyage of considerable length ever made by a steam vessel; and Fulton, though not to be classed with James Watt as an inventor, is entitled to the great honor of having been the first to make steam-navigation an every-day commercial success. . . . The success of the Clermont on the trial-trip was such that Fulton soon after advertised the vessel as a regular passenger-boat between New York and Albany. During the next winter the Clermont was repaired and enlarged, and in the summer of 1808 was again on the route to Albany; and, meantime, two new steamboats — the Raritan and the Car of Neptune — had been built by Fulton. In the year 1811 he built the Paragon. . . . A steam ferry-boat was built to ply between New York and Jersey City in 1812, and the next year two others, to connect the metropolis with Brooklyn. . . . Fulton had some active and enterprising rivals." The prize gained by him "was most closely contested by Colonel John Stevens, of Hoboken," who built his first steamboat in 1804, propelling it by a screw with four blades, and his second in 1807, with two screws. He was shut out from New York waters by a monopoly which Fulton and Livingston had procured, and sent his little ship by sea to Philadelphia. "After Fulton and Stevens had thus led the way, steam-navigation was introduced very rapidly on both sides of the ocean." Nicholas J. Roosevelt, at Pittsburgh, in 1811, built, from Fulton's plans, the first steamer on the western rivers, and took her to New Orleans. "The first steamer on the Great Lakes was the Ontario, built in 1816, at Sackett's Harbor."—R. H. Thurston, *Hist. of the Growth of the Steam Engine, ch.* 5.

On the Ocean.—"In 1819 the Atlantic was first crossed by a ship using steam. This was the Savannah, of 380 tons, launched at Corlear's Hook, New York, August 22, 1818. She was built to ply between New York and Savannah as a sailing packet. She was however, purchased by Savannah merchants [by a Mr. Scarborough] and fitted with steam machinery, the paddle-wheels being constructed to fold up and be laid upon the deck when not in use, her shaft also having a joint for that purpose. She left Savannah on the 26th of May, and reached Liverpool in 25 days, using steam 18 days. The log book, still preserved, notes several times taking the wheels in on deck in thirty minutes. In August she left Liverpool for Cronstadt. An effort was made to sell her to Russia, which failed. She sailed for Savannah, touching at Copenhagen and Arendal, and arrived in 53 days. Her machinery later was taken out, and she resumed her original character as a sailing packet, and ended her days by being wrecked on the south coast of Long Island. But steam-power had by 1830 grown large enough to strike out more boldly. The Savannah's effort was an attempt in which steam was only an auxiliary, and one, too, of a not very powerful kind. Our coastwise steamers, as well as those employed in Great Britain, as also the voyage of the Enterprise to Calcutta in 1825 (though she took 113 days in doing it), had settled the possibility of the use of steam at sea, and the question had now become whether a ship could be built to cross the Atlantic depending entirely on her steam power. It had become wholly a question of fuel consumption. The Savannah, it may be said, used pitch-pine on her outward voyage, and wood was for a very long time the chief fuel for steaming purposes in America. . . . In 1836, under the influence of Brunel's bold genius, the Great Western Steamship Company was founded as an off-shoot of the Great Western Railway, whose terminus was then Bristol." The Company's first ship was the Great Western. She was of unprecedented size—236 feet length and 35 feet 4 inches breadth—"determined on by Brunel as being necessary for the requisite power and coal carrying capacity. . . . The Great Western was launched on July 19, 1837, and was towed from Bristol to the Thames to receive her machinery, where she was the wonder of London. She left for Bristol on March 31, 1838; and arrived, after having had a serious fire on board, on April 2d. In the meantime others had been struck with the possibility of steaming to New York; and a company, of which the moving spirit was Mr. J. Laird, of Birkenhead, purchased the Sirius, of 700 tons, employed between London and Cork, and prepared her for a voyage to New York. The completion of the Great Western was consequently hastened; and she left Bristol on Sunday, April 8, 1838, at 10 A. M. with 7 passengers on board, and reached New York on Monday, the 23d, the afternoon of the same day with the Sirius, which had left Cork Harbor (where she had touched en route from London) four days before the Great Western had left Bristol. The latter still had nearly 200 tons of coal, of the total of 800, on board on arrival; the Sirius had consumed her whole supply, and was barely able to make harbor. It is needless to speak of the reception of these two ships at New York. It was an event which stirred the whole country, and with reason; it had practically, at one stroke, reduced the breadth of the Atlantic by half. . . . The Great Western started on her return voyage, May 7th, with 66 passengers. This was made in 14 days, though one was lost by a stoppage at sea." Within a few years following several steamers were placed in the transatlantic trade, among them the Royal William, the British Queen, the President, the Liverpool, and the Great Britain, the latter a screw steamer, built of iron and put afloat by the Great Western Company. In 1840 the long famous Cunard line was founded by Mr. Samuel Cunard, of Halifax, Nova Scotia, in company with Mr. George Burns of Glasgow and Mr. David McIver of Liverpool. The screw propeller (taking the place of the paddle-wheel), which made its first appearance in ocean navigation with the Great Britain, obtained its practical introduction through the labors of the great Swedish engineer, John Ericsson, though an idea of it had been in the minds of many inventors for a century and a half. Ericsson, induced by Francis B. Ogden and Captain Robert F. Stockton, U. S. N., came to the United States in 1839, and the introduction of the screw-propeller occurred rapidly after that date, the paddle-wheel disappearing from ocean steamships first, and more slowly from the steamers

engaged in lake and river navigation.—F. E. Chadwick, *The Development of the Steamship ("Ocean Steamships," ch. 1).*

STELA, OR STELE.—"This is one of the words most frequently used in Egyptian archæology, because it designates a monument which is found in hundreds. The stela is a rectangular flat stone generally rounded at the summit, and it was made use of by the Egyptians for all sorts of inscriptions. These stelæ were, generally speaking, used for epitaphs; they also served, however, to transcribe texts which were to be preserved or exhibited to the public, and in this latter case the stela became a sort of monumental placard."—A. STONE AGE.—BRONZE AGE.—IRON AGE.—"Human relics of great antiquity occur, more or less abundantly, in many parts of Europe. . . . The antiquities referred to are of many kinds — dwelling-places, sepulchral and other monuments, forts and camps, and a great harvest of implements and ornaments of stone and metal. In seeking to classify these relics and remains according to their relative antiquity, archæologists have selected the implements and ornaments as affording the most satisfactory basis for such an arrangement, and they divide prehistoric time into three periods, which are termed respectively the Stone Age, the Bronze Age, and the Iron Age. Of these periods the earliest was the Stone Age, when implements and ornaments were formed exclusively of stone, wood, horn, and bone. The use of metal for such purposes was then quite unknown. To the Stone Age succeeded the Age of Bronze, at which time cutting instruments, such as swords and knives and axes, began to be made of copper, and an alloy of that metal and tin. When in the course of time iron replaced bronze for cutting-instruments, the Bronze Age came to an end and the Iron Age supervened. . . . The archæological periods are simply so many phases of civilization, and it is conceivable that Stone, Bronze, and Iron Ages might have been contemporaneous in different parts of one and the same continent. . . . It has been found necessary within recent years to subdivide the Stone Age into two periods, called respectively the Old Stone and New Stone Ages; or, to employ the terms suggested by Sir John Lubbock, and now generally adopted, the Palæolithic and Neolithic Periods. The stone implements belonging to the older of these periods show but little variety of form, and are very rudely fashioned, being merely roughly chipped into shape, and never ground or polished."—J. Geikie, *Prehistoric Europe, pp.* 5–11.

STRAITS SETTLEMENTS, The.—"The Straits Settlements are the British possessions in or near the Malay peninsula, deriving their name from the Straits of Malacca, which divide that peninsula from the great island of Sumatra. Taken from North to South, they consist of the island of Penang with the strip of mainland opposite, known as Province Wellesley, the territory and islands of the Dindings, the territory of Malacca, and the island of Singapore." Penang was ceded to the English East India Company in 1786, by the rajah of Kedah. In 1800 the opposite strip of mainland was bought from the rajah. In 1819 a factory was established at Singapore, and in 1824 it was acquired by treaty from the sultan of Johor. In the same year, English possessions in Sumatra were exchanged with the Dutch for Malacca. In 1826 the three settlements were united under one government. In 1867 these Malay dependencies were separated from the Indian administration and constituted a crown colony. The seat of government is at Singapore. "Outside British territory, the peninsula from the isthmus of Kra to the Southern extremity is divided into a number of states, governed by native rulers, and partly independent, partly more or less subject to foreign influence."—C. P. Lucas, *Historical Geography of the British Colonies, v.* 1, *sect.* 2, *ch.* 3.

STRASBURG: A. D. 357.—Julian's victory.—The most serious battle in Julian's campaigns against the Alemanni was fought in August, A. D 357, at Strasburg (then a Roman post called Argentoratum) where Chnodomar had crossed the Rhine with 35,000 warriors. The result was a great victory for the Romans.—E. Gibbon, *Decline and Fall of the Roman Empire, ch.* 19.—See GAUL: A. D. 355–361.

A. D. 842.—The Oaths.—During the civil wars which occurred between the grandsons of Charlemagne, in 842, the year following the great battle at Fontainelles, the two younger of the rivals, Karl and Ludwig, formed an alliance against Lothaire. Karl found his support in Aquitaine and Neustria; Ludwig depended on the East Franks and their German kindred. The armies of the two were assembled in February at Strasburg (Argentaria) and a solemn oath of friendship and fidelity was taken by the kings in the presence of their people and repeated by the latter. The oath was repeated in the German language, and in the Romance language — then just acquiring form in southern Gaul, — and it has been preserved in both. "In the Romance form of this oath, we have the earliest monument of the tongue out of which the modern French was formed."—P. Godwin, *Hist. of France: Ancient Gaul, ch.* 18.

STUNDISTS, The.—In the neighborhood of Kherson, in southern Russia, the Stundist religious movement arose, about 1858. As its name implies, it "had a German origin. As far back as 1778 the great Empress Catherine had colonized Kherson with peasants from the Suabian land, who brought with them their religion, their pastors, and their industrious, sober ways. For many years national prejudices and the barriers of language kept Russians and Germans apart from each other. But sooner or later true life begins to tell. . . . Some of the Russian peasants who had been helped in their poverty or ministered to in their sickness by their German neighbours began to attend their services — to keep the 'stunden,' or 'hours," of praise and prayer; they learned to read, were furnished with the New Testament in their own language, and eventually some of them found the deeper blessing of eternal life. In this simple scriptural fashion this memorable movement began. Men told their neighbours what God had done for their souls, and so the heavenly contagion spread from cottage to cottage, from village to village, and from province to province, till at length the Russian Stundists were found in all the provinces from the boundaries of the Austrian Empire in the West to the land of the Don Cossack in the East, and were supposed to number something like a quarter-of-a-million souls. . . . M. Dalton, a Lutheran clergyman, long resident in St. Petersburg, and whose knowledge of religious movements in Russia is very considerable, goes so far as to say that they are two millions strong. . . . Compared with the enormous population of the Russian Empire, the number of Stundists, whether two millions or only a quarter of a million, is insignificant; but the spirit of Stundism . . . is slowly but surely leavening the whole mass."—J. Brown, ed., *The Stundists.*

STYLES IN ARCHITECTURE.—The evolution of the Classic Greek, the Romanesque, and the Gothic.—In a work of this nature it is impossible to give anything that would represent the history of Architecture in even a moderately satisfactory way. The most that seems practicable is to quote some such sketch as the following (from the late Professor Freeman), of the historical development of an artistic use of the two fundamental principles or forms of building — that of the entablature and that of the arch — in producing the styles of Architecture known as the Classic, or Greek, the Romanesque, and the Gothic: "The two great principles of mechanical construction which pervade all architectural works may be most conveniently taken as the types of the two groups under which we may primarily arrange all styles of architecture. These are the entablature and the arch, two forms of construction which will be found to form an absolutely exhaustive division. . . . As two straight lines cannot form a mathematical figure, so two uprights, be they walls, posts, or pillars, can hardly constitute an architectural work; circumstances will continually occur, in which two points must be connected, and that not by a third wall, but by something supported by the points to be connected. The different ways of effecting this constitute the grand distinction which is at the root of all varieties of architectural style. The entablature effects the union by simply laying on the top of the two uprights a third horizontal mass, held together by mere cohesion; the uprights being placed, as Mr. Pugin says, 'just so far apart that the blocks laid on them would not break by their own weight.' It is manifest that this is totally independent of material; the construction is precisely the same, whether the materials be beams of wood or blocks of stone. In the other form, that of the arch, the connection is effected, not by a single block kept together by cohesion, but by a series bound together, without visible support, by a wonderful law of the mechanical powers. This again is abstractedly independent of material. . . . As all buildings must be constructed on one of these two principles, architectural styles may be most naturally divided accordingly. . . . Every definite style of architecture has for its animating principle of construction either the entablature or the arch; its forms and details adapt themselves to this construction, and it is the different ways in which this construction is sought to be decorated, and the different degrees of excellence attained by each, which constitute the subordinate distinctions among the members of the two main groups. . . . The question of the first introduction of the arch is one of the very greatest interest, and at the same time of the greatest difficulty. . . . We find it hard to realize the position of civilised nations, possessing a finished and graceful style of architecture, employing it on the

erection of sumptuous and magnificent edifices, and yet totally ignorant of any mode of connecting walls or pillars save by the mere horizontal block of stone or timber. Still more incomprehensible does it seem to us that any people should have been aware of so great a mechanical advantage, and yet have but rarely employed it, and never allowed it to become a leading feature of construction, or enter in the least degree into the system of decoration. Yet . . . such was the case with some of the most famous nations of antiquity ; the bare knowledge both of the arched form and the arched construction seems certain in Egypt, probable in Greece ; yet it never entered into either style of architecture. . . . It is undoubtedly to the nations of ancient Italy, to the inhabitants of Etruria, and the Romans to whom they communicated their arts, that we owe the first regular and systematic employment of the arch. . . . In Grecian architecture we have the entablature system completely developed ; the mechanical structure, common to it with the rudest cromlech or the most unadorned Cyclopean gateway, is now enriched in the most simple and consistent manner ; a perfect system of ornament embraces every feature, and refines all into consummate dignity and beauty. The three orders of Grecian architecture afford forms of perfection unsurpassed by mere human skill ; it was only the yearnings of the heavenward spirit, the inspiration of the Church's ritual, that could conceive aught more noble ; not purer, not lovelier, but vaster in conception, more majestic in execution, and holier in its end. Yet even here we see the inherent incapacity of the entablature system to attain the highest perfection either of building or architecture. The exceeding difficulty, verging on impossibility, of roofing a large space by its means, unless with materials then unknown, presents insuperable difficulties. Grecian architecture produced one form of the most perfect beauty, but it could produce one only : every structure is cast in precisely the same type, with the same outline, the same features both constructive and decorative." In the systematic employment of the arch, "we have first the classical Roman, the style of Rome herself in her days of greatest power, in which the aboriginal arch system of the Italians and the entablature of the Greeks are mingled together in a style of great boldness and splendour, but utterly devoid of architectural consistency. . . . When, towards the close of the empire, the entablature began to be dropped, and the arch made the principal feature, a consistent round-arched style at once reappears ; we have now the germ of Romanesque, a style subsequently developed by the northern nations into many forms of great splendour. . . . This great family includes many national varieties ; Byzantine, Lombard, German, Provençal, Saxon, Norman : presenting great diversities among themselves, but agreeing in several general features of Roman origin, of which the most prominent, and the true badge of the style, is the round arch, which is employed in all important positions, and made, as it should be, the chief feature of the decorative system. The architecture of the Saracens, which from them has spread, under certain modifications, into all countries which have bowed to the faith of Mahomet, is of Roman origin, and its earlier forms might in strictness be considered as varieties of Romanesque. It is a style highly enriched and magnificent, yet mixed, fantastic, and incongruous, and not easily admitting of a comprehensive definition. . . . To the Romanesque, after a transitional period, succeeds the Gothic architecture. We now feel at once that we have arrived at the most perfect form which the art can assume. . . . All the different forms of this matchless style, all the countless varieties of outline and detail for which it is so conspicuous, aim, each of them with greater or less success, at the carrying out of the one idea which is the soul of all, that of vertical extension. To the upward aspiration of every feature, we owe, not indeed the invention, but the adaptation and general employment of the outward badge of the style, the pointed arch ; from the same source . . . arise its accessories, the round or polygonal abacus, the peculiar style of moulding, the clustered pillar, the confirmed use of vaulting. Then again, externally, the high gable, the spire, the pinnacle, the flying buttress, the pyramidal outline which in its best examples is given to the whole structure, are all expressions of this one great idea."—E. A. Freeman, *A History of Architecture, introd., ch.* 3.

SUBLICIAN BRIDGE.—The Pons Sublicius was the single bridge in ancient Rome with which the Tiber was originally spanned.

SUBLIME PORTE, The.—"The figurative language of the institutes of Mahomet II. [Sultan, A. D. 1451–1481], still employed by his successors, describes the state under the martial metaphor of a tent. The Lofty Gate of the Royal Tent (where Oriental rulers of old sate to administer justice) denotes the chief seat of government. The Italian translation of the phrase, 'La Porta Sublima,' has been adopted by Western nations, with slight modifications to suit their respective languages ; and by 'The Sublime Porte' we commonly mean the Imperial Ottoman Government. The Turkish legists and historians depict the details of their government by imagery drawn from the same metaphor of a royal tent. The dome of the state is supported by four pillars. These are formed by, 1st, the Viziers ; 2nd, the Kadiaskers (judges) ; 3rd, the Defterdars (treasurers) ; and 4th, the Nischandyis (the secretaries of state). Besides these, there are the Outer Agas, that is to say, the military rulers ; and the Inner Agas, that is to say, the rulers employed in the court. There is also the

order of the Ulema, or men learned in the law. The Viziers were regarded as constituting the most important pillar that upheld the fabric of the state. In Mahomet II.'s time the Viziers were four in number. Their chief, the Grand Vizier, is the highest of all officers. . . . The . . . high legal dignitaries (who were at that time next in rank to the Kadiaskers) were, 1st, the Kho-dya, who was the tutor of the Sultan and the Princes Royal; 2nd, the Mufti, the authoritative expounder of the law; and, 3rdly, the Judge of Constantinople. . . . The great council of state was named the Divan; and, in the absence of the Sultan, the Grand Vizier was its president. . . . The Divan was also attended by the Reis-Effendi, a general secretary, whose power afterwards became more important than that of the Nis-chandyis; by the Grand Chamberlain, and the Grand Marshal, and a train of other officers of the court."—Sir E. S. Creasy, *Hist. of the Ottoman Turks, pp.* 96–97.—See, also, Pharaohs.

SUB-TREASURY, The. See United States of Am.: A. D. 1837.

SUBURA, at Rome, The.—"Between the converging points of the Quirinal and Esquiline hills lay the Subura, a district of ill-fame, much abused by the poets and historians of imperial times. It was one of the most ancient district communities ('pagi') of Rome, and gave name to one of the four most ancient regions. Nor was it entirely occupied by the lowest class of people, as might be inferred from the notices of it in Martial and Horace. Julius Cæsar is said to have lived in a small house here. . . . The Subura was a noisy, bustling part of Rome, full of small shops, and disreputable places of various kinds."—R. Burn, *Rome and the Campagna, ch.* 6, *pt.* 1.

SUDAN, OR SOUDAN, The.—"Forming a natural frontier to the Great Desert is that section of Africa known by the somewhat vague name of Sudan. By this term is understood the region south of the Sahara, limited on the west and south by the Atlantic Ocean as far as it reaches. From the Gulf of Guinea inland, there is no definite southern border line. It may, however, be assumed at the fifth degree of north latitude. . . . [The] Nile region is generally taken as the eastern frontier of Sudan, although it properly reaches to the foot of the Abyssinian highlands. Hence modern maps have introduced the appropriate expression 'Egyptian Sudan' for those eastern districts comprising Senaar, Kordofan, Darfur, and some others. Sudan is therefore, strictly speaking, a broad tract of country reaching right across the whole continent from the Atlantic seaboard almost to the shores of the Red Sea, and is the true home of the Negro races. When our knowledge of the interior has become sufficiently extended to enable us accurately to fix the geographical limits of the Negroes, it may become desirable to make the term Sudan convertible with the whole region inhabited by them."—Hellwald-Johnston, *Africa* (*Stanford's Compendium*), *ch.* 9.

SUEVI, OR SUEBI, The.—"I must now speak of the Suevi, who are not one nation as are the Chatti and Tencteri, for they occupy the greater part of Germany, and have hitherto been divided into separate tribes with names of their own, though they are called by the general designation of 'Suevi.' A national peculiarity with them is to twist their hair back and fasten it in a knot. This distinguishes the Suevi from the other Germans, as it also does their own freeborn from their slaves."—"Suevia would seem to have been a comprehensive name for the country between the Elbe and the Vistula as far north as the Baltic. Tacitus and Cæsar differ about the Suevi. Suabia is the same word as Suevia."—Tacitus, *Germany, tr. by Church and Brodribb, ch.* 38, *with geog. note.*—"The Suebi, that is the wandering people or nomads. . . . Cæsar's Suebi were probably the Chatti; but that designation certainly belonged in Cæsar's time, and even much later, to every other German stock which could be described as a regularly wandering one."—T. Mommsen, *Hist. of Rome, bk.* 5, *ch.* 7, *with note.*—"The name of the country called Suabia is a true ethnological term, even as Franconia is one. The one means the country occupied by the Suevi, the other the country occupied by the Franks. . . . At what time the name first became an unequivocal geographical designation of what now, in the way of politics, coincides with the Grand Duchy of Baden and part of Wurtemburg, and, in respect to its physical geography, is part of the Black Forest, is uncertain. It was not, however, later than the reign of Alexander Severus (ending A. D. 235). . . . Therein, Alamannia and Suevia appear together — as terms for that part of Germany which had previously gone under the name of 'Decumates agri,' and the parts about the 'Limes Romanus.' With this, then, begins the history of the Suevi of Suabia, or, rather, of the Suabians. Their alliances were chiefly with the Alamanni and Burgundians; their theatre the German side of France, Switzerland, Italy, and (in conjunction with the Visigoths) Spain. Their epoch is from the reign of Alexander to that of Augustulus, in round numbers, from about A. D. 225 to A. D. 475."—R. G. Latham, *The Germania of Tacitus, epilegomena, sect.* 20.—See, also, Alemanni, and Bavaria: The ethnology.

B. C. 58.—Expulsion from Gaul by Cæsar.—A large body of the Suevi, a formidable German tribe, the name of which has survived in modern Suabia, crossed the Rhine and entered Gaul about B. C. 61. They came at the invitation of the Arverni and Sequani of Gaul, who

were forming a league against the Ædui, their rivals, and who sought the aid of the German warriors. The latter responded eagerly to the call, and, having lodged themselves in the country of the Sequani, summoned fresh hordes of their countrymen to join them. The Gauls soon found that they had brought troublesome neighbors into their midst, and they all joined in praying Cæsar and his Roman legions to expel the insolent intruders. Cæsar had then just entered on the government of the Roman Gallic provinces and had signalized his first appearance in the field by stopping the attempted migration of the Helvetii, destroying two thirds of them, and forcing the remnant back to their mountains. He welcomed an opportunity to interfere further in Gallic affairs and promptly addressed certain proposals to the Suevic chieftain, Ariovistus, which the latter rejected with disdain. Some negotiations followed, but both parties meant war, and the question, which should make a conquest of Gaul, was decided speedily at a great battle fought at some place about 80 miles from Vesontio (modern Besançon) in the year 58 B. C. The Germans were routed, driven into the Rhine and almost totally destroyed. Ariovistus, with a very few followers, escaped across the river, and died soon afterwards.—C. Merivale, *History of the Romans, ch.* 6.

A. D. 409-573.—Their history in Spain.—"The Suevi kept their ground for more than half a century in Spain, before they embraced the Christian religion and became Arians. Being surrounded on all sides by the Visigoths, their history contains merely an account of the wars which they had to maintain against their neighbours: they were long and bloody; 164 years were passed in fighting before they could be brought to yield. In 573, Leovigild, king of the Visigoths, united them to the monarchy of Spain."—J. C. L. de Sismondi, *Fall of the Roman Empire, ch.* 7 (*v.* 1).—See, also, VANDALS: A. D. 428, and GOTHS (VISIGOTHS): A. D. 507–712.

A. D. 460-500.—In Germany.—Those tribes of the Suevic confederacy which remained on the German side of the Rhine, while their brethren pressed southwards, along with the Vandals and Burgundians, in the great invasive movement of 406, "dwelt in the south-west corner of Germany, in the region which is now known as the Black Forest, and away eastwards along the Upper Danube, perhaps as far as the river Lech. They were already mingled with the Alamanni of the mountains, a process which was no doubt carried yet further when, some thirty years after the time now reached by us [about 460] Clovis overthrew the monarchy of the Alamanni [A. D. 496], whom he drove remorselessly forth from all the lands north of the Neckar. The result of these migrations and alliances was the formation of the two great Duchies with which we are so familiar in the mediaeval history of Germany—Suabia and Franconia. Suabia, which is a convertible term with Alamannia, represents the land left to the mingled Suevi and Alamanni; Franconia that occupied east of the Rhine by the intrusive Franks."—T. Hodgkin, *Italy and her Invaders, bk.* 4, *ch.* 1 (*v.* 3).—See, also, ALEMANNI: A. D. 496–504.

SUIONES, The.—"Next [on the Baltic] occur the communities of the Suiones, seated in the very Ocean, who, besides their strength in men and arms, also possess a naval force. . . . These people honour wealth."—Tacitus, *Germany, Oxford Trans., ch.* 44.—"The Suiones inhabited Sweden and the Danish isles of Funen, Langland, Zeeland, Laland, etc. From them and the Cimbri were derived the Normans."—*Note to same.*

SULIOTES, The.—"The heroic struggle of the little commonwealth over a number of years [1787–1804] against all the resources and ingenuity of Ali Pacha [vizir of Jannina] is very stirring and full of episode. . . . The origin of the Suliotes is lost in obscurity. . . . The chief families traced their origin to different villages and districts; and, though their language was Greek, they appear to have consisted, for the most part, of Christian Albanians, with a small admixture of Greeks, who, flying from the oppression of the invaders, had taken refuge in the well-nigh inaccessible mountains of Chamouri (Chimari) [in Epirus], and had there established a curious patriarchal community. . . . At the time when they became conspicuous in history the Suliotes were possessed of four villages in the great ravine of Suli, namely, Kiapha, Avariko, Samoniva, and Kako-Suli, composing a group known as the Tetrachorion; and seven

villages in the plains, whose inhabitants, being considered genuine Suliotes, were allowed to retire into the mountain in time of war. . . . They also controlled between 50 and 60 tributary villages, with a mixed population of Greeks and Albanians; but these were abandoned to their fate in war. In the early part of the last century the Suliotes are said not to have had more than 200 fighting-men, although they were almost always engaged in petty warfare and marauding expeditions; and at the period of their extraordinary successes the numbers of the Suliotes proper never exceeded 5,000 souls, with a fighting strength of 1,500 men, who were, however, reinforced at need by the women. Their government was purely patriarchal; they had neither written laws nor law courts, and the family formed the political unit of the State."—R. Rodd, *The Customs and Lore of Modern Greece, ch.* 10.

SULTAN, The Title.—Gibbon (ch. 57) represents that the title of Sultan was first invented for Mahmud the Gaznevide, by the ambassador of the Caliph of Bagdad, "who employed an Arabian or Chaldaic word that signifies 'power' and 'master.'" But Dr. William Smith in a note to this passage in Gibbon, citing Weil, says: "It is uncertain when the title of Sultan was first used, but it seems at all events to have been older than the time of Mahmud. . . . According to Ibn Chaldun it was first assumed by the Bowides." See Turks: A. D. 999–1183.

SUMATRA.—Sumatra, next to Borneo the largest island in the Malay Archipelago, has an area of more than 128,000 geographical square miles, and is about 1,100 miles in length. The Dutch began to establish settlements on the eastern coast in 1618, and have gradually become masters of almost the entire island, though large parts of it are still undeveloped and little explored. Until lately, an independent sovereign, the sultan of Achin, ruled a considerable dominion in the northern extremity of Sumatra, but the Achinese have been subjugated, after an obstinate war. Generally the natives are Mohammedans, and of the Malayan race, but in widely differing tribes. Among the most barbarous are the Bataks, of the interior, who are pagans and cannibals, though quite advanced in several arts.

SUPREMACY, The Acts of.—The first Act of Supremacy, which established the independence of the Church of England and broke its relations with Rome, was passed by the English Parliament during the reign of Henry VIII., in 1534. It enacted "that the King should be taken and reputed 'the only Supreme Head on earth of the Church of England called Ecclesia Anglicana,' . . . with full power to visit, reform, and correct all heresies, errors, abuses, offences, contempts and enormities which, by any manner of spiritual authority or jurisdiction, ought to be reformed or corrected."—T. P. Taswell-Langmead, *English Const. Hist., ch.* 11.—The Act of Supremacy was repealed in the reign of Mary and re-enacted with changes in that of Elizabeth, 1559. See England: A. D. 1527–1534; and 1559.

SUPREME COURT OF THE UNITED STATES, The.—"On the 24th day of September, 1789, the act organizing the Supreme Court was passed. The Court was constituted with a Chief Justice and five associates. John Jay was appointed the first Chief Justice by Washington. Webster said of him that when the ermine fell upon his shoulders, it touched a being as spotless as itself. The Court first convened in February, 1790, in New York. It does not appear from the reports that any case then came before it. Jay remained Chief Justice until 1795, when he resigned to become governor of the State of New York. A Chief Justice in our day would hardly do this. His judicial duties were so few that he found time, in 1794, to accept the mission to England to negotiate the treaty so famous in history as 'Jay's Treaty.' John Rutledge of South Carolina was appointed to succeed Jay, but he was so pronounced in his opposition to the treaty, and so bitter in his denunciation of Jay himself, that the federal Senate refused to confirm him. William Cushing of Massachusetts, one of the associate justices, was then nominated by Washington, and was promptly confirmed; but he preferred to remain associate justice, and Oliver Ellsworth of Connecticut was made Chief Justice. He held the office until 1801, when John Marshall of Virginia was appointed by President Adams. Marshall held the office thirty-four years. He was known at the time of his appointment as an ardent Federalist. In our time

he is known as 'the great Chief Justice.' Roger B. Taney was the next incumbent. He was appointed by President Jackson. His political enemies styled him a renegade Federalist, and said that his appointment was his reward for his obsequious obedience, while Secretary of the Treasury, to President Jackson. But Taney, despite the Dred Scott decision, was an honest man and a great judge. His opinions are models of lucid and orderly discussion, and are of admirable literary form. He held the office for twenty-eight years, and upon his death in 1864, President Lincoln appointed Salmon P. Chase, of Ohio. Chief Justice Chase died in 1874. President Grant then appointed Morrison R. Waite of Ohio. He died in 1888. Melville W. Fuller, of Illinois, is the present [1889] incumbent, his appointment having been made by President Cleveland. . . . In 1807 an associate judge was added by Congress; two more were added in 1837, and one in 1863. They were added to enable the Court to perform the work of the circuits, which increased with the growth of the country."—J. S. Landon, *The Const. Hist. and Gov't of the U. S., lect.* 10.—"The Supreme court is directly created by Art. iii., sect. 1 of the Constitution, but with no provision as to the number of its judges. Originally there were six; at present there are nine, a chief justice, with a salary of $10,500 (£2,100), and eight associate judges (salary $10,000). The justices are nominated by the President and confirmed by the Senate. They hold office during good behaviour, i. e. they are removable only by impeachment. They have thus a tenure even more secure than that of English judges, for the latter may be removed by the Crown on an address from both Houses of Parliament. . . . The Fathers of the Constitution were extremely anxious to secure the independence of their judiciary, regarding it as a bulwark both for the people and for the States against aggressions of either Congress or the President. They affirmed the life tenure by an unanimous vote in the Convention of 1787, because they deemed the risk of the continuance in office of an incompetent judge a less evil than the subserviency of all judges to the legislature, which might flow from a tenure dependent on legislative will. The result has justified their expectations. The judges have shown themselves independent of Congress and of party, yet the security of their position has rarely tempted them to breaches of judicial duty. Impeachment has been four times resorted to, once only against a justice of the Supreme court, and then unsuccessfully. Attempts have been made, beginning from Jefferson, who argued that judges should hold office for terms of four or six years only, to alter the tenure of the Federal judges, as that of the State judges has been altered in most States; but Congress has always rejected the proposed constitutional amendment. The Supreme court sits at Washington from October till July in every year."—J. Bryce, *The Am. Commonwealth, pt.* 1, *ch.* 22 (*v.* 1).—"It is, I believe, the only national tribunal in the world which can sit in judgment on a national law, and can declare an act of all the three powers of the Union to be null and void. No such power does or can exist in England. Any one of the three powers of the state, King, Lords, or Commons, acting alone, may act illegally; the three acting together cannot act illegally. An act of parliament is final; it may be repealed by the power which enacted it; it cannot be questioned by any other power. For in England there is no written constitution; the powers of Parliament, of King, Lords, and Commons, acting together, are literally boundless. But in your Union, it is not only possible that President, Senate, or House of Representatives, acting alone, may act illegally; the three acting together may act illegally. For their powers are not boundless, they have no powers but such as the terms of the constitution, that is, the original treaty between the States, have given them. Congress may pass, the President may assent to, a measure which contradicts the terms of the constitution. If they so act, they act illegally, and the Supreme Court can declare such an act to be null and void. This difference flows directly from the difference between a written and an unwritten constitution. It does not follow that every state which has a written constitution need vest in its highest court such powers as are vested in yours, though it certainly seems to me that, in a federal constitution, such a power is highly expedient. My point is simply that such a power can exist where there is a written constitution: where there is no written constitution, it cannot."—E. A. Freeman, *The English People in its Three Homes: Lectures to American Audiences, pp.* 191–192.

SWEDENBORG, and the New Church.—"Swedenborg was born in 1688, and died in 1772. The son of a Lutheran Bishop of Sweden, a student at several universities, and an extensive traveler throughout all the principal countries of Europe, he had exceptional opportunities for testing the essential quality of contemporaneous Christianity. . . . Until he was more than fifty years of age, Swedenborg had written nothing on religious subjects, and apparently given them no special attention. He was principally known, in his own country, as Assessor Extraordinary of the Board of Mines, and an influential member of the Swedish Diet; and not only there, but throughout Europe, as a writer on many branches of science and philosophy. In this field he acquired great distinction; and the number and variety of topics which he treated was remarkable. Geometry and algebra, metallurgy and magnetism, anatomy, physiology, and the relation of the soul to the body were among the subjects which received his attention. There is to be noticed in the general order of his publications a certain gradual, but steady, progression from lower to higher themes,—from a contemplation of the mere external phenomena of nature to a study of their deep and hidden causes. He was always full of devout spiritual aspirations. In all his scientific researches he steadfastly looked through nature up to nature's God. . . . Maintaining this inflexible belief in God and revelation, and in the essential unity of truth, Swedenborg, in his upward course, at last reached the boundary line between matter and spirit. Then it was that he entered on those remarkable experiences by which, as he affirms, the secrets of the other world were revealed to him. He declares that the eyes of his spirit were opened, and that he had, from that time forward, conscious daily intercourse with spirits and angels. His general teaching on this subject is that the spiritual world is an inner sphere of being,—not material, and in no wise discernible to natural senses, yet none the less real and substantial,—and that it is the ever-present medium of life to man and nature."—J. Reed, *Why am I a New Churchman? (North Am. Rev., Jan.,* 1887). —"The doctrine of Correspondence is the central idea of Swedenborg's system. Everything visible has belonging to it an appropriate spiritual reality. The history of man is an acted parable; the universe, a temple covered with hieroglyphics. Behmen, from the light which flashes on certain exalted moments, imagines that he receives the key to these hidden significances,—that he can interpret the 'Signatura Rerum.' But he does not see spirits, or talk with angels. According to him, such communications would be less reliable than the intuition he enjoyed. Swedenborg takes opposite ground. 'What I relate,' he would say, 'comes from no such mere inward persuasion. I recount the things I have seen. I do not labour to recall and to express the manifestation made me in some moment of ecstatic exaltation. I write you down a plain statement of journeys and conversations in the spiritual world, which have made the greater part of my daily history for many years together. I take my stand upon experience. I have proceeded by observation and induction as strict as that of any man of science among you. Only it has been given me to enjoy an experience reaching into two worlds—that of spirit, as well as that of matter.'. . . According to Swedenborg, all the mythology and the symbolisms of ancient times were so many refracted or fragmentary correspondences—relics of that better day when every outward object suggested to man's mind its appropriate divine truth. Such desultory and uncertain links between the seen and the unseen are so many imperfect attempts toward that harmony of the two worlds which he believed himself commissioned to reveal. The happy thoughts of the artist, the imaginative analogies of the poet, are exchanged with Swedenborg for an elaborate system. All the terms and objects in the natural and spiritual worlds are catalogued in pairs."—R. A. Vaughan, *Hours with the Mystics, bk.* 12, *ch.* 1 (*v.* 2).—"It is more than a century since the foundation of this church [the New-Church] was laid, by the publication of the theological writings of Emanuel Swedenborg. For more than half of that time, individuals and societies have been active in translating them, and in publishing them widely. There have been many preachers of these doctrines, and not a few writers of books

and periodicals. The sale of Swedenborg's writings, and of books intended to present the doctrines of the church, has been constant and large. How happens it, under these circumstances, that the growth of this church has been and is so slow, if its doctrines are all that we who hold them suppose them to be? There are many answers to this question. One among them is, that its growth has been greater than is apparent. It is not a sect. Its faith does not consist of a few specific tenets, easily stated and easily received. It is a new way of thinking about God and man, this life and another, and every topic connected with these. And this new way of thinking has made and is making what may well be called great progress. It may be discerned everywhere, in the science, literature, philosophy, and theology of the times; not prevalent in any of them, but existing, and cognizable by all who are able to appreciate these new truths with their bearings and results. . . . Let it not be supposed that by the New-Church is meant the organized societies calling themselves by that name. In one sense, that is their name. Swedenborg says there are three essentials of this Church: a belief in the Divinity of the Lord, and in the sanctity of the Scriptures, and a life of charity, which is a life governed by a love of the neighbor. Where these are, there is the Church. Whoever holds these essentials in faith and life is a member of the New-Church, whatever may be his theological name or place. Only in the degree in which he so holds these essentials is any one a member of that church. Those who, holding or desiring to hold these essentials in faith and life, unite and organize that they may be assisted and may assist each other in so holding them, constitute the visible or professed New-Church. But very false would they be to its doctrines, if they supposed themselves to be exclusively members of that Church, or if they founded their membership upon their profession or external organization."—T. Parsons, *Outlines of the Religion and Philosophy of Swedenborg, ch.* 14, *sect.* 5.

Early inhabitants. See Helvetii; Alemanni: A. D. 496–504; Burgundians: A. D. 443–451; also, below: The Three Forest Cantons.

The Three Forest Cantons, their original Confederation (Eidgenossenschaft), and their relations with the House of Austria.—History divested of Legend.—"It is pretty clear that among those Helvetii with whom Cæsar had his cruel struggle [see Helvetii, The arrested migration of the], and who subsequently became an integral portion of the empire, there were no people from the Forest Cantons of Schwytz, Uri, and Unterwalden. The men who defied the Roman eagles were inhabitants of the mountain slopes between the lakes of Geneva and Constance. On the North, the authority of the Romans penetrated no farther in the direction of the mountainous Oberland than to Zurich or Turicum. They, no doubt, ascended far up the valley of the Rhone, where they have left their mark in the speech of the people to this day; but they did not climb the mountain passes leading across the great chain of the Alps. It may be questioned if the higher valleys of Switzerland were then, or for centuries after the fall of the Western Empire, inhabited. . . . In the district of these Forest Cantons no remains of lake inhabitancy have yet been found. . . . Yet none of the places where they are met with could have been more naturally suited for lake-dwellings than these. The three Forest Cantons began the political history of Switzerland, having established among themselves that political centre round which the other Cantons clustered. In ethnological history, they were the latest members of the Swiss family, since their territory remained without occupants after the more accessible portions of the country had been peopled. In the same sense, the canton from which the confederation derived its name—that of Schwytz—is the youngest of all. When the Irish monk, afterwards canonised as St. Gall, settled near the Lake of Constance in the 7th century, he had gone as completely to the one extreme of the inhabited world, as his brother Columba had gone to the other when he sailed to Iona. If the districts of Thurgau, Appenzell, and St. Gall were at that period becoming gradually inhabited, it is supposed that Schwytz was not occupied by a permanent population until the latter half of the 9th century. . . . M. Rilliet [in 'Les Origines de la Confédération Suisse,' par Albert Rilliet] is one of the first writers who has applied himself to the study of . . . original documents [title-deeds of property, the chartularies of religious houses, records of litigation, etc.] as they are still preserved in Switzerland, for the purpose of tracing the character and progress of the Swiss people and of their free institutions. It was among the accidents propitious to the efforts of the Forest Cantons, that, among the high feudal or manorial rights existing within their territory, a large proportion was in the hands of monastic bodies. Throughout Europe the estates of the ecclesiastics were the best husbanded, and inhabited by the most prosperous vassals. These bodies ruled their vassals through the aid of a secular officer, a Vogt or advocate, who sometimes was the master, sometimes the servant, of the community. In either case there

was to some extent a division of rule, and it was not the less so that in these Cantons the larger estates were held by nuns. The various struggles for supremacy in which emperors and competitors for empire, the successive popes, and the potentates struggling for dominion, severally figured, gave many opportunities to a brave and sagacious people, ever on the watch for the protection of their liberties; but the predominant feature in their policy — that, indeed, which secured their final triumph — was their steady adherence in such contests to the Empire, and their acknowledgment of its supremacy. This is the more worthy of notice since popular notions of Swiss history take the opposite direction, and introduce us to the Emperor and his ministers as the oppressors who drove an exasperated people to arms. In fact, there still lurk in popular history many fallacies and mistakes about the nature of the 'Holy Roman Empire' as an institution of the middle ages [see ROMAN EMPIRE, THE HOLY]. . . . It is not natural or easy indeed to associate that mighty central organisation with popular liberty and power; and yet in the feudal ages it was a strong and effective protector of freedom. . . . Small republics and free cities were scattered over central Europe and protected in the heart of feudalism. . . . M. Rilliet aptly remarks, that in the Swiss valleys, with their isolating mountains, and their narrow strips of valuable pasture, political and local conditions existed in some degree resembling those of a walled city." The election, in 1273, of Rudolph of Hapsburg, as King of the Romans, was an event of great importance in the history of the Swiss Cantons, owing to their previous connexion with the House of Hapsburg (see AUSTRIA: A. D. 1246–1282), "a connexion geographically so close that the paternal domains, whence that great family takes its ancient name, are part of the Swiss territory at the present day." Such agencies as belonged naturally to the most powerful family in the district fell to the House of Hapsburg. Its chiefs were the chosen advocates or champions of the religious communities neighbor to them; and "under such imperial offices as are known by the title Bailiff, Procurator, or Reichsvogt, they occasionally exercised what power the Empire retained over its free communities. Such offices conferred authority which easily ripened into feudal superiorities, or other forms of sovereignty. M. Rilliet attributes considerable, but not, it seems to us, too much importance to a rescript bearing date the 26th May, 1231. It is granted by Henry VII., King of the Romans, or more properly of the aggregated German communities, as acting for his father, the Emperor Frederic II. This instrument revokes certain powers over the people of the community of Uri, which had been granted at a previous time by Frederic himself to the Count of Hapsburg. It addresses the people of Uri by the term Universitas — high in class among the enfranchised communities of the Empire — and promises to them that they shall no more under any pretext be withdrawn from the direct jurisdiction of the Empire. . . . The great point reached through this piece of evidence, and corroborated by others, is, that at this remote period the district which is now the Canton of Uri was dealt with as a Roman Universitas — as one of the communities of the Empire, exempt from the immediate authority of any feudal chief. . . . M. Rilliet's researches show that Uri is the Canton in which the character of a free imperial community was first established, perhaps we should rather say it was the Canton in which the privilege was most completely preserved from the dangers that assailed it. The Hapsburgs and their rivals had a stronger hold on Schwytz. . . . In many of the documents relating to the rights of Rudolph over this district, bearing date after he became Cæsar, it is uncertain whether he acts as emperor or as immediate feudal lord. . . . Rudolph, however, found it, from whatever cause, his policy to attach the people of Schwytz to his interests as emperor rather than as feudal lord; and he gave them charters of franchise which seem ultimately to have made them, like their neighbours of Uri, a free community of the Empire, or to have certified their right to that character. In the fragmentary records of the three Cantons, Unterwalden does not hold rank as a free community of the Empire at so early a time even as Schwytz. It is only known that in 1291 Unterwalden acted with the other two as an independent community. In the disputes for supremacy between the Empire and the Church all three had been loyal to the Empire. There are some indications that Rudolph had discovered the signal capacity of these mountaineers for war, and that already there were bands of Swiss among the imperial troops. The reign of Rudolph lasted for 18 years. . . . During his 18 years of possession he changed the character of the Cæsarship, and the change was felt by the Swiss. In the early part of his reign he wooed them to the Empire — before its end he was strengthening the territorial power of his dynasty. . . . When Rudolph died in 1291, the imperial crown was no longer a disputable prize for a chance candidate. There was a conflict on the question whether his descendants should take it as a hereditary right, or the electors should show that they retained their power by another choice. The three Cantons felt that there was danger to their interests in the coming contest, and took a great step for their own protection. They formed a league or confederacy [Eidgenossenschaft] for mutual co-operation and protection. Not only has it been handed down to us in literature, but the very parchment has been preserved as a testimony to the early independence of the Forest Cantons, the Magna Charter of Switzerland. This document reveals the existence of unexplained antecedents by calling itself a renewal of the old league — the Antique Confederatio. . . . Thus we have a Confederation of the Three Cantons, dated in 1291, and referring to earlier alliances; while popular history sets down the subsequent Confederation of 1314 as the earliest, for the purpose of making the whole history of Swiss independence arise out of the tragic events attributed to that period. If this leads the way to the extinction of the story on which the Confederation is based, there is compensation in finding the Confederation in active existence a quarter of a century earlier. But the reader will observe that the mere fact of the existence of this anterior league overturns the whole received history of Switzerland, and changes the character of the alleged struggle with the House of Austria, prior to the battle of Morgarten. There is nothing in this document or in contemporary events breathing of disloyalty to the Empire. The two parties whom the Swiss

held in fear were the Church, endeavouring to usurp the old prerogatives of the Empire in their fullness; and the feudal barons, who were encroaching on the imperial authority. Among the three the Swiss chose the chief who would be least of a master. . . . Two years before the end of the 13th century [by the election of Albert, son of Rudolph, the Hapsburg family] . . . again got possession of the Empire, and retained it for ten years. It passed from them by the well-known murder of the Emperor Albert. The Swiss and that prince were ill-disposed to each other at the time of the occurrence, and indeed the murder itself was perpetrated on Swiss ground; yet it had no connexion with the cause of the quarrel which was deepening between the House of Hapsburg and the Cantons. . . . There exist in contemporary records no instances of wanton outrage and insolence on the Hapsburg side. It was the object of that power to obtain political ascendancy, not to indulge its representatives in lust or wanton insult. . . . There are plentiful records of disputes in which the interests of the two powers were mixed up with those of particular persons. Some of these were trifling and local, relating to the patronage of benefices, the boundaries of parishes, the use of meadows, the amount of toll duties, and the like; others related to larger questions, as to the commerce of the lake of the Four Cantons, or the transit of goods across the Alps. But in these discussions the symptoms of violence, as is natural enough, appear rather on the side of the Swiss communities than on that of the aggrandising imperial house. The Canton of Schwytz, indeed, appears to have obtained by acts of violence and rapacity the notoriety which made its name supreme among the Cantons. . . . We are now at a critical point, the outbreak of the long War of Swiss Independence, and it would be pleasant if we had more distinct light than either history or record preserves of the immediate motives which brought Austria to the point of invading the Cantons. . . . The war was no doubt connected with the struggle for the Empire [between Frederic of Austria and Louis of Bavaria — see GERMANY: A. D. 1314–1347]; yet it is not clear how Frederic, even had he been victorious over the three Cantons, could have gained enough to repay him for so costly an expedition. . . . We are simply told by one party among historical writers that his army was sent against his rebellious subjects to reduce them to obedience, and by the other that it was sent to conquer for the House of Hapsburg the free Cantons. That a magnificent army did march against them, and that it was scattered and ruined by a small body of the Swiss at Morgarten, on the 15th November, 1315, is an historical event too clearly attested in all its grandeur to stand open to dispute. After the battle, the victorious Cantons renewed their Confederation of 1291, with some alterations appropriate to the change of conditions. The first bond or confederation comes to us in Latin, the second is in German. . . . Such was the base around which the Cantons of the later Swiss Confederation were gradually grouped. . . . To this conclusion we have followed M. Rilliet without encountering William Tell, or the triumvirate of the meadow of Rütli, and yet with no consciousness that the part of Hamlet has been left out of the play." According to the popular tradition, the people of the Three Cantons were maddened by wanton outrages and insolences on the part of the Austrian Dukes, until three bold leaders, Werner Stauffacher, Arnold of the Melkthal, and Walter Fürst, assembled them in nightly meetings on the little meadow of Grütli or Rütli, in 1307, and bound them by oaths in a league against Austria, which was the beginning of the Swiss Confederation. This story, and the famous legend of William Tell, connected with it, are fading out of authentic history under the light which modern investigation has brought to bear on it.—*The Legend of Tell and Rütli* (*Edinburgh Rev., January*, 1869).

4-11th Centuries. See BURGUNDY.

A. D. 1207-1401.—Extension of the dominions of the House of Savoy beyond Lake Geneva.—The city of Geneva surrounded. See SAVOY: 11–15TH CENTURIES.

A. D. 1332-1460.—The extension of the old Confederation, or "Old League of High Germany."—The Three Cantons increased to Eight.—"All the original cantons were German in speech and feeling, and the formal style of their union was 'the Old League of High Germany.' But in strict geographical accuracy there was . . . a small Burgundian element in the Confederation, if not from the beginning, at least from its aggrandizement in the 13th and 14th centuries. That is to say, part of the territory of the states which formed the old Confederation lay geographically within the kingdom of Burgundy, and a further part lay within the Lesser Burgundy of the Dukes of Zähringen. But, by the time when the history of the Confederation begins, the kingdom of Burgundy was pretty well forgotten, and the small German-speaking territory which it took in at its extreme north-east corner may be looked on as practically German ground. . . . It is specially needful to bear in mind, first, that, till the last years of the 13th century, not even the germ of modern Switzerland had appeared on the map of Europe; secondly, that the Confederation did not formally become an independent power till the 17th century; lastly, that, though the Swiss name had been in common use for ages, it did not become the formal style of the Confederation till the 19th century. Nothing in the whole study of historical geography is more necessary than to root out the notion that there has always been a country of Switzerland, as there has always been a country of Germany, Gaul, or Italy. And it is no less needful to root out the notion that the Swiss of the original cantons in any way represent the Helvetii of Cæsar. The points to be borne in mind are that the Swiss Confederation is simply one of many German Leagues, which was more lasting and became more closely united than other German Leagues — that it gradually split off from the German Kingdom — that in the course of this process, the League and its members obtained a large body of Italian and Burgundian allies and subjects — lastly, that these allies and subjects have in modern times been joined into one Federal body with the original German Confederates. The three Swabian lands [the Three Forest Cantons] which formed the kernel of the Old League lay

at the point of union of the three Imperial kingdoms, parts of all of which were to become members of the Confederation in its later form. . . . The Confederation grew for a while by the admission of neighbouring lands and cities as members of a free German Confederation, owning no superior but the Emperor. First of all [1332], the city of Luzern joined the League. Then came the Imperial city of Zürich [1351], which had already begun to form a little dominion in the adjoining lands. Then [1352] came the land of Glarus and the town of Zug with its small territory. And lastly came the great city of Bern [1353], which had already won a dominion over a considerable body of detached and outlying allies and subjects. These confederate lands and towns formed the Eight Ancient Cantons. Their close alliance with each other helped the growth of each canton separately, as well as that of the League as a whole. Those cantons whose geographical position allowed them to do so, were thus able to extend their power, in the form of various shades of dominion and alliance, over the smaller lands and towns in their neighbourhood. . . . Zürich, and yet more Bern, each formed, after the manner of an ancient Greek city, what in ancient Greece would have passed for an empire. In the 15th century [1415–1460], large conquests were made at the expense of the House of Austria, of which the earlier ones were made by direct Imperial sanction. The Confederation, or some or other of its members, had now extended its territory to the Rhine and the Lake of Constanz. The lands thus won, Aargau, Thurgau, and some other districts, were held as subject territories in the hands of some or other of the Confederate States. . . . No new states were admitted to the rank of confederate cantons. Before the next group of cantons was admitted, the general state of the Confederation and its European position had greatly changed. It had ceased to be a purely German power. The first extension beyond the original German lands and those Burgundian lands which were practically German began in the direction of Italy. Uri had, by the annexation of Urseren, become the neighbour of the Duchy of Milan, and in the middle of the 15th century, this canton acquired some rights in the Val Levantina on the Italian side of the Alps. This was the beginning of the extension of the Confederation on Italian ground. But far more important than this was the advance of the Confederates over the Burgundian lands to the west."—E. A. Freeman, *Historical Geog. of Europe, ch.* 8, *sect.* 6.

A. D. 1386-1388.—Austrian defeats at Sempach and Naefels. — "Seldom, if ever, has Switzerland seen a more eventful month than that of July, 1386, for in that month she fought and won the ever-memorable battle of Sempach. To set down all the petty details as to the causes which led to this engagement would be tedious indeed. It is sufficient to point out . . . that there is seldom much love lost between oppressor and oppressed, and Austria and the Swiss Confederation had for some time held that relation to each other. A ten years' peace had indeed been concluded between the two powers, but it was a sham peace, and the interval had been used by both to prepare for new conflicts. . . . Zurich laid siege to Rapperswyl with the intent to destroy the odious Austrian toll-house; Lucerne levelled with the ground the Austrian fort Rothenburg, and entered into alliances with Entlebuch and Sempach to overthrow the Austrian supremacy. This was equal to a declaration of war, and war was indeed imminent. Duke Leopold III., of Austria, was most anxious to bring the quarrel to an issue, and to chastise the insolent Swiss citizens and peasantry. . . . The nobles of Southern Germany rallied round the gallant swordsman, and made him their leader in the expeditions against the bourgeoisie and peasantry. And no sooner had the truce expired (June, 1386), than they directed their first attack on the bold Confederation. . . . Leopold's plan was to make Lucerne the centre of his military operations, but in order to draw away attention from his real object, he sent a division of 5,000 men to Zurich to simulate an attack on that town. Whilst the unsuspecting Confederates lay idle within the walls of Zurich, he gathered reinforcements from Burgundy, Swabia, and the Austro-Helvetian Cantons, the total force being variously estimated at from 12,000 to 24,000 men. He marched his army in the direction of Lucerne, but by a round-about way, and seized upon Willisan, which he set on fire, intending to punish Sempach 'en passant' for her desertion. But the Confederates getting knowledge of his stratagem left Zurich to defend herself, and struck straight across the country in pursuit of the enemy. Climbing the heights of Sempach, . . . they encamped at Meyersholz, a wood fringing the hilltop. The Austrians leaving Sursee, for want of some more practicable road towards Sempach, made their way slowly and painfully along the path which leads from Sursee to the heights, and then turns suddenly down upon Sempach. Great was their surprise and consternation when at the junction of the Sursee and Hiltisrieden roads they came suddenly upon the Swiss force. . . . The Swiss . . . drew up in battle order, their force taking a kind of wedge-shaped mass, the shorter edge foremost, and the bravest men occupying the front positions. . . . The onset was furious, and the Austrian Hotspurs, each eager to outstrip his fellows in the race for honour, rushed on the Swiss, drove them back a little, and then tried to encompass them and crush them in their midst. . . . All the fortune of the battle seemed against the Swiss, for their short weapons could not reach a foe guarded by long lances. But suddenly the scene changed. 'A good and pious man,' says the old chronicler, deeply mortified by the misfortune of his country, stepped forward from the ranks of the Swiss — Arnold von Winkelried. Shouting to his comrades in arms, 'I will cut a road for you; take care of my wife and children!' he dashed on the enemy, and, catching hold of as many spears as his arms could encompass, he bore them to the ground with the whole weight of his body. His comrades rushed over his corpse, burst through the gap made in the Austrian ranks, and began a fierce hand-to-hand encounter. . . . A fearful carnage followed, in which no mercy was shown, and there fell of the common soldiers 2,000 men, and no fewer than 700 of the nobility. The Swiss lost but 120 men. . . . This great victory . . . gave to the Confederation independence, and far greater military and political eminence. . . . The story of Winkelried's heroic action has given rise to much fruitless but interesting discussion.

The truth of the tale, in fact, can neither be confirmed nor denied, in the absence of any sufficient proof. But Winkelried is no myth, whatever may be the case with the other great Swiss hero, Tell. There is proof that a family of the name of Winkelried lived at Unterwalden at the time of the battle. . . . The victory of Naefels [April, 1388] forms a worthy pendant to that of Sempach. . . . The Austrians, having recovered their spirits after the terrible disaster," invaded the Glarus valley in strong force, and met with another overthrow, losing 1,700 men. "In 1389 a seven years' peace was arranged. . . . This peace was first prolonged for 20 years, and afterwards, in 1412, for 50 years."— Mrs. L. Hug and R. Stead, *The Story of Switzerland, ch.* 15.

A. D. 1396-1499.—The Grey Leagues.—Democratic Independence of Graubünden (Grisons) achieved.—Their Alliance with the Swiss Cantons.—The Swabian War.—Practical separation of the Confederacy from the Empire.— "It was precisely at this epoch [the later years of the 14th century] that the common people of Graubünden [or the Grisons] felt the necessity of standing for themselves alone against the world. Threatened by the Habsburgs, suspicious of the See of Chur [see TYROL], ill-governed by their decadent dynastic nobles, encouraged by the example of the Forest Cantons, they began to form leagues and alliances for mutual protection and the preservation of peace within the province. Nearly a century was occupied in the origination and consolidation of those three Leagues which turned what we now call Graubünden into an independent democratic state. . . . The town of Chur, which had been steadily rising in power, together with the immediate vassals of the See, took the lead. They combined into an association, which assumed the name of the Gotteshausbund; and of which the Engadine [the upper valley of the Inn] formed an important factor. Next followed a league between the Abbot of Dissentis, the nobles of the Oberland, the Communes of that district, and its outlying dependencies. This was called the Grey League — according to popular tradition because the folk who swore it wore grey serge coats, but more probably because it was a League of Counts, Gräfen, Grawen. The third league was formed after the final dispersion of the great inheritance of Vaz, which passed through the Counts of Toggenburg into the hands of females and their representatives. This took the name of Zehn Gerichte, or Ten Jurisdictions, and embraced Davos, Belfort, Schanfigg, the Prättigau, and Maienfeld. The date of the formation of the Gotteshausbund is uncertain; but its origin may be assigned to the last years of the 14th century [some writers date it 1396]. That of the Grey League, or Graue Bund, or Obere Theil, as it is variously called, is traditionally 1424. (It is worth mentioning that this League took precedence of the other two, and that the three were known as the Grey Leagues.) That of the Zehn Gerichte is 1438. In 1471 these three Leagues formed a triple alliance, defensive and offensive, protective and aggressive, without prejudice to the Holy Roman Empire of which they still considered themselves to form a part, and without due reservation of the rights acquired by inheritance or purchase by the House of Austria within their borders. This important revolution, which defeudalized a considerable Alpine territory, and which made the individual members of its numerous Communes sovereigns by the right of equal voting, was peaceably effected. . . . The constitution of Graubünden after the formation of the Leagues, in theory and practise, . . . was a pure democracy, based on manhood suffrage. . . . The first difficulties with which this new Republic of peasants had to contend, arose from the neighbourhood of feudal and imperial Austria. The Princes of the House of Habsburg had acquired extensive properties and privileges in Graubünden. . . . These points of contact became the source of frequent rubs, and gave the Austrians opportunities for interfering in the affairs of the Grey Leagues. A little war which broke out in the Lower Engadine in 1475, a war of raids and reprisals, made bad blood between the people of Tirol and their Grisons neighbours. But the real struggle of Graubünden with Austria began in earnest, when the Leagues were drawn into the so-called Swabian War (1496-1499). The Emperor Maximilian promoted an association of south German towns and nobles, in order to restore his Imperial authority over the Swiss Cantons. They resisted his encroachments, and formed a close alliance with the Grey Leagues. That was the commencement of a tie which bound Graubünden, as a separate political entity, to the Confederation, and which subsisted for several centuries. Graubünden acted as an independent Republic, but was always ready to cooperate with the Swiss. . . . Fighting side by side [in the Swabian War] with the men of Uri, Glarus, Zürich, the Bündners learned the arts of warfare in the lower Rheinthal. Afterwards, in 1499, they gained the decisive battle of this prolonged struggle on their own ground and unassisted. In a narrow gorge called Calven, just where the Münsterthal opens out into the Vintschgau above Glurns, 5,000 men of the Grey Leagues defeated the whole chivalry and levies of Tirol. Many thousands of the foe (from 4,000 to 5,000 is the mean estimate) were left dead upon the field." Maximilian hastened to the scene with a fresh army, but found only deserted villages, and was forced by famine to retreat. "The victory of Calven raised the Grisons to the same rank as the Swiss, and secured their reputation in Europe as fighting men of the best quality. It also led to a formal treaty with Austria, in which the points at issue between the two parties were carefully defined."— J. A. Symonds, *Hist. of Graubünden (in Strickland's "The Engadine," pp.* 29-33).— During the Swabian War, in 1499, the Swiss concluded a treaty with France. "Willibald Pirkheimer, who was present with 400 red-habited citizens of Nuremberg, has graphically described every incident of this war. The imperial reinforcements arrived slowly and in separate bodies; the princes and nobles fighting in real earnest, the cities with little inclination. The Swiss were, consequently, able to defeat each single detachment before they could unite, and were in this manner victorious in ten engagements." The Emperor, "dividing his forces, despatched the majority of his troops against Basle, under the Count von Fürstenburg, whilst he advanced towards Geneva, and was occupied in crossing the lake when the news of Fürstenburg's defeat and death, near Dornach, arrived. The princes, little desirous of staking their honour against their low-born opponents, instantly returned home in great numbers, and the emperor

was therefore compelled to make peace [1499]. The Swiss retained possession of the Thurgau, and of Basle, and Schaffhausen joined the confederation, which was not subject to the imperial chamber, and for the future belonged merely in name to the empire, and gradually fell under the influence of France."— W. Menzel, *Hist. of Germany, ch.* 191 (*v.* 2).

A. D. 1476-1477. — Defeat of Charles the Bold. See BURGUNDY (THE FRENCH DUKEDOM): A. D. 1476–1477.

A. D. 1481-1501.—Disagreements over the spoils of the war with Charles the Bold.— Threatened rupture. — The Convention of Stanz.— Enlargement of the Confederacy.— Its loose and precarious constitution.— "In the war with Charles the Bold, Bern had gained greatly in extent on the west, while the immense booty taken in battle and the tributes laid on conquered cities seemed to the country cantons to be unfairly divided, for all were supposed to receive an equal share. The cities protested that it was no fair division of booty to give each one of the country states, who had altogether furnished 14,000 men for the war, an even share with Bern which had sent out 40,000. Another bone of contention was the enlargement of the union. The cities had for a long time desired to bring the cantons of Freiburg and Solothurn into the League. . . . But these were municipal governments, and the Forest States, unwilling to add more to the voting strength of the cities and thereby place themselves in the minority, refused again and again to admit these cantons. The situation daily grew more critical. Schwyz, Uri, and Unterwalden made an agreement with Glarus to stand by each other in case of attack. Luzern, Bern, and Zürich made a compact of mutual citizenship, a form of agreement by which they sought to circumvent the oath they had taken in the League of Eight to enter into no new alliances. Just at this point there was alleged to have been discovered a plot to destroy the city of Luzern by countrymen of Obwalden and Entlibuch. The cities were thrown into a frenzy and peace was strained to the utmost. Threats and recriminations passed from side to side, but finally, as an almost hopeless effort toward reconciliation, a Diet was called to meet at Stanz on the 8th of December, 1481. The details of this conference read like romance, so great was the transformation which took place in the feelings of the confederates. . . . Just as the Diet was about to break up in confusion a compromise was effected, and an agreement was drawn up which is known as the Convention of Stanz (Stanzerverkomniss). . . . As to the matter latest in contention, it was agreed that movable booty should be divided according to the number of men sent into war, but new acquisitions of territory should be shared equally among the states participating. Thus the principle of state-rights was preserved and the idea of popular representation received its first, and for 300 years almost its only recognition. In another agreement, made the same day, Freiburg and Solothurn were admitted to the League on equal terms with the others. In 1501 the confederation was enlarged by the admission of Basel, which, on account of its situation and importance, was a most desirable acquisition, and in the same year the addition of Schaffhausen, like Basel, a free imperial city with outlying territories, still further strengthened the Union. The next, and for 285 years the last, addition to the inner membership of the alliance was Appenzell. . . . Connected with the confederacy there were, for varying periods and in different relationships, other territories and cities more or less under its control. One class consisted of the so-called Allied Districts ('Zugewandte and Verbündete Orte'), who were attached to the central body not as equal members, but as friends for mutual assistance. This form of alliance began almost with the formation of the league, and gradually extended till it included St. Gallen, Biel, Neuchatel, the Bishopric of Basel (which territory lay outside the city), the separate confederacies of Graubünden and Valais, Geneva and several free imperial cities of Germany, at one time so distant as Strassburg. More closely attached to the confederation were the 'Gemeine Vogteien,' or subject territories [Aargau, Thurgau, etc.], whose government was administered by various members of the league in partnership. These lands had been obtained partly by purchase or forfeiture of loans and partly by conquest. . . . Before the middle of the 16th century nearly all the territory now included in Switzerland was in some way connected with the confederation. Upon this territorial basis of states, subject lands and allies, the fabric of government stood till the close of the 18th century. It was a loose confederation, whose sole organ of common action was a Diet in which each state was entitled to one vote. . . . Almost the only thread that held the Swiss Confederation together was the possession of subject lands. In these they were interested as partners in a business corporation. . . . These common properties were all that prevented complete rupture on several critical occasions."—J. M. Vincent, *State and Federal Gov't in Switzerland, ch.* 1.

A. D. 1519-1524.—Beginning of the Reformation at Zurich, under Zwingli. See PAPACY: A. D. 1519–1524.

A. D. 1528-1531.—The spreading of the Reformation.—Adhesion of the Forest Cantons to Romanism.—Differences between the Swiss Reformers and the German Protestants.—The Conference at Marburg.— Civil war among the Cantons.—Death of Zwingli.— From Zurich, "the reformed faith penetrated, but only gradually, into the northern and eastern cantons. Bern was reached in 1528, after a brilliant disputation held in that city. Basel and Schaffhausen followed in 1529, and then St. Gall, Appenzell, Graubünden, and Solothurn, though some of them had serious struggles within themselves and fell in only partly with the reforms. But in the Central or Forest Cantons it was that the fiercest opposition was encountered. . . . From the very simplicity of their lives the people ignored the degeneracy of the priesthood, and amongst these pastoral peoples the priests were of simpler manners and more moral life than those in the cities; they disliked learning and enlightenment. Then there was the old feeling of antipathy to the cities, coupled with a

strong dislike for the reforms which had abolished 'Reislaufen' [military service under foreign pay], that standing source of income to the cantons. Lucerne, bought with French gold, struggled with Zurich for the lead. So far was the opposition carried that the Catholic districts by a majority of votes insisted (at the Diet) on a measure for suppressing heresy in Zurich, whilst some were for expelling that canton from the league. The Forest Cantons issued orders that Zwingli should be seized should he be found within their territories; consequently he kept away from the great convocation at Baden, 1526. . . . Wider and wider grew the chasm between the two religious parties, and Zwingli at length formed a 'Christian League' between the Swiss Protestants and some of the German cities and the Elector of Hesse. On the other hand, the Catholics entered into an alliance with Ferdinand of Austria, a determined enemy to the reformed religion. At last the Protestant party was exasperated beyond bearing, and Zurich declared war on the Forest Cantons, Zwingli himself joining in the vicissitudes of the campaign. His camp presented the 'picture of a well-organized, God-fearing army of a truly Puritan stamp.' The encounter at Kappel, in June, 1529, however, took a peaceful turn, thanks to the mediation of Landammann Aebli, of Glarus, greatly to the disgust of Zwingli, who prophetically exclaimed that some day the Catholics would be the stronger party, and then they would not show so much moderation. All ill-feeling, indeed, subsided when the two armies came within sight of each other. The curious and touching episode known as the 'Kappeler Milchsuppe' took place here. A band of jolly Catholics had got hold of a large bowl of milk, but lacking bread they placed it on the boundary line between Zug and Zurich. At once a group of Zurich men turned up with some loaves, and presently the whole party fell to eating the 'Milchsuppe' right merrily. A peace was concluded on the 29th of June, 1529, by which the Austrian League was dissolved, and freedom of worship granted to all. . . . By his treatise, 'De verâ et falsâ religione' (1525), Zwingli had, though unwillingly, thrown the gauntlet into the Wittenberg camp. The work was intended to be a scientific refutation of the Catholic doctrine of transubstantiation, and a war of words arose. The contest was by each disputant carried on 'suo more;' by Luther with his usual authoritative and tempestuous vehemence, by Zwingli in his own cool reasoning, dignified, and courteous style and republican frankness. Presently there came a strong desire for a union between the German Protestants, and the Swiss Reformers [called Sacramentarians by the Lutherans], . . . the impulse to it being given by Charles V.'s 'Protest' against the Protestants. Landgrave Philip of Hesse, the political leader of the German reformers, invited Luther and Zwingli to meet at his castle of Marburg [1529], with the view of reconciling the two sections. The religious colloquium was attended by many savants, princes, nobles, and all the chief leaders of the Reformation, and might have done great things, but came to grief through the obstinacy of Luther, as is well known, or rather through his determination to approve of no man's views except they should agree exactly with his own. Luther insisted on a literal interpretation of the words 'This is my body,' whilst Zwingli saw in them only a metaphorical or symbolical signification. . . . To return for a moment to home politics. The peace of 1529 was a short-lived one. Zwingli, anxious only to spread the reformed faith over the whole republic, did not realize clearly the hatred of the Forest district against the new creed. . . . War was imminent, and was indeed eagerly desired on both sides. Bern, finding that war was likely to be injurious to her private ends, insisted on a stoppage of mercantile traffic between the opposing districts, but Zwingli scorned to use such a means to hunger the enemy and so bring them to submit. However Zurich was outvoted in the Christian League (May 16th), and the Forest was excluded from the markets of that city and Bern. The rest may be easily guessed. On Zurich was turned all the fury of the famished Forest men, and they sent a challenge in October, 1531. A second time the hostile armies met at Kappel, but the positions were reversed. Zurich was unprepared to meet a foe four times as numerous as her own, and Bern hesitated to come to her aid. However Göldlin, the captain of the little force, recklessly engaged with the opposing army, whether from treachery or incapacity is not known, but he was certainly opposed to the reformed faith. Zwingli had taken leave of his friend Bullinger, as though foreseeing his own death in the coming struggle, and had joined the Zurich force. He was with the chief banner, and, with some 500 of his overmatched comrades, fell in the thickest of the battle. . . . But the reformation was far too deeply rooted to be thus destroyed. Bullinger, the friend of Zwingli, and, later on, of Calvin, worthily succeeded to the headship of the Zurich reformers."—Mrs. L. Hug and R. Stead, *Switzerland, ch.* 22.

A. D. 1531-1648.—Religious divisions and conflicts.—Annexations of territory.—Peace with the Duke of Savoy.—The coming of Protestant refugees.—Industrial progress.—Peace.—"A peace at Dennikon in 1531 marks the acknowledgement of the principle of each Canton's independence. . . . The Confederacy was now fatally divided. There is, perhaps, no other instance of a State so deeply and so permanently sundered by the Reformation. Other governments adopted or rejected the reformed religion for their dominions as a whole; the Confederacy, by its constitution, was constrained to allow each Canton to determine its religion for itself; and the presence of Catholic and Reformed States side by side, each clinging with obstinacy to the religion of their choice, became the origin of jealousies and wars which have threatened more than once to rend asunder the ties of union. Next to the endless but uninteresting theme of religious differences comes the history of the annexations" by which the Confederacy extended its limits. "In the direction of the Jura was a country divided between many governments, which the princes of Savoy, the Hapsburgs of the West, had once effectually ruled, but which had become morselled among many claimants during a century and a half of weakness, and which Duke Charles III. of Savoy was now seeking to reconcile to his authority. Geneva was

the chief city of these parts. . . . Factions in favour of or against [the rule of the Duke of Savoy] . . . divided the city [see GENEVA: A. D. 1504–1535]. The alliance of Bern and Freyburg was at length sought for; and the conclusion of a treaty of co-citizenship in 1526 opened at once the prospect of a collision between the House of Savoy and the Confederacy. That collision was not long delayed. In 1536, after repeated acts of provocation by Charles III., 7,000 men of Bern appeared within Geneva. To reach the city they had traversed the Pays de Vaud; after entering it they passed onwards to the provinces of Gex and Chablais. All that they traversed they annexed. Even the city which they had entered they would have ruled, had not some sparks of honour and the entreaties of its inhabitants restrained them from the annihilation of the liberties which they had been called on to defend. The men of Freyburg and of the Valais at the same time made humbler conquests from Savoy. Later, the strong fortress of Chillon, and the rich bishopric of Lausanne, were seized upon by Bern. A wide extent of territory was thus added to the Confederacy; and again a considerable population speaking the French tongue was brought under the dominion of the Teutonic Cantons. These acquisitions were extended, in 1555, by the cession of the county of Gruyère, through the embarrassments of its last impoverished Count. They were diminished, however, by the loss of Gex and Chablais in 1564. The jealousy of many of the cantons at the good fortune of their confederates, and the reviving power of the House of Savoy, had made the conquests insecure. Emmanuel Philibert, the hero of St. Quentin, the ally of the great sovereigns of France and Spain, asked back his provinces; and prudence counselled the surrender of the two, in order to obtain a confirmation of the possession of the rest [see SAVOY AND PIEDMONT: A. D. 1559–1580]. The southern side of the Lake Leman, which had thus been momentarily held, and which nature seemed to have intended to belong to the Confederacy, was thus abandoned. The frontiers, however, which were now secured became permanent ones. The Dukes of Savoy had transferred much of their ambition, with their capital, beyond the Alps; and the Confederates remained secure in their remaining possessions. The Confederacy might now have added further to its power by admitting new members to its League. . . . Constance . . . had urged its own incorporation. The religious tendencies of its inhabitants, however, had made it suspected; and it was allowed to fall, in 1548, without hope of recovery, under the dominion of Austria. Geneva . . . was pleading loudly for admission. The jealousy of Bern, and later the hostility of the Catholic Cantons to the faith of which the city had become the centre, refused the request. She remained a mere ally, with even her independence not always ungrudgingly defended against the assaults of her enemies. Religious zeal indeed was fatal during this century to political sagacity. Under its influence the alliance with the rich city of Mulhausen, which had endured for more than a hundred years, was thrown off in 1587; the overtures of Strasburg for alliance were rejected; the proposals of the Grisons Leagues were repulsed. The opportunities of the Confederates were thus neglected, while those of their neighbours became proportionately increased. . . . The progress that is to be traced during the 16th century is such as was due to the times rather than to the people. The cessation of foreign wars and the fewer inducements for mercenary service gave leisure for the arts of peace; and agriculture and trade resumed their progress. Already Switzerland began to be sought by refugees from England, France, and Italy. The arts of weaving and of dyeing were introduced, and the manufacture of watches began at Geneva. . . . War, which had been almost abandoned except in the service of others, comes little into the annals of the Confederation as a State. . . . As another century advances, there is strife at the very gates of the Confederation. . . . But the Confederacy itself was never driven into war."—C. F. Johnstone, *Historical Abstracts, ch.* 7.

A. D. 1579-1630.—The Catholic revival and rally.—The Borromean or Golden League.—"Pre-eminent amongst those who worked for the Catholic revival was the famous Carlo Borromeo, Archbishop of Milan and nephew of Pius IV. He lived the life of a saint, and in due time was canonized. To his see belonged the Swiss bailliages in the Ticino and Valtellina. Indefatigable in his labours, constantly visiting every part of his diocese, toiling up to the Alpine huts, he gathered the scattered flocks into the Papal fold, whether by mildness or by force. . . . For the spread of Catholic doctrines he hit upon three different means. He called into being the Collegium Helveticum in 1579 at Milan, where the Swiss priests were educated free. He sent the Jesuits into the country, and placed a nuncio at Lucerne, in 1580. In 1586 was signed, between the seven Catholic cantons, the Borromean or Golden League, directed against the reformers, and in the following year a coalition was, by the same cantons, excepting Solothurn, entered into with Philip of Spain and with Savoy. The Jesuits settled themselves in Lucerne and Freiburg, and soon gained influence amongst the rich and the educated, whilst the Capuchins, who fixed themselves at Altorf, Stanz, Appenzell, and elsewhere, won the hearts of the masses by their lowliness and devotion. In this way did Rome seek to regain her influence over the Swiss peoples, and the effect of her policy was soon felt in the semi-Protestant and subject lands. . . . In the Valais, the Protestant party, though strong, was quite swept out by the Jesuits, before 1630."—Mrs. L. Hug and R. Stead, *Switzerland, ch.* 25.

D. 1652-1789.—The Peasant Revolt and the Toggenburg War.—Religious conflicts.—Battles of Villmergen.—The Peace of Aarau.—"About the middle of the 17th century there was growing up, in all the cantons except the Waldstätten, a feeling of strong discontent among the peasants, who still suffered from

many of the tyrannies which had descended to them from the old days of serfdom. They felt the painful contrast between their lot and that of the three old cantons, where every peasant voted for his own magistrates and his own laws, and helped to decide the taxes and contributions which he should pay. . . . Now that their liberty had been proclaimed at Westphalia, they were inspired with the idea of trying to make it a reality. . . . They rose on the occasion of the reduction of the value of their copper coinage. . . . Opposition began among the Entlibuchers of Lucerne, a tall and sturdy race, that lived in the long, fertile valley on the banks of the Emmen. . . . Their spirit was soon quenched, however, by the threats of Zurich and Berne; but though they yielded for the moment, their example had spread, and there were popular risings, excited in the large canton of Berne by the same causes, which were not so easily checked. There was a second revolt in Lucerne, which was intended to be nothing less than a league of all the lower classes throughout the ten cantons. The peasants of Lucerne, Berne, Basel, Solothurn, and the territory of Aargau, all joined in this and held an assembly at Sumiswald, in April 1653, where they chose Nicholas Leuenberger as their chief, and proclaimed their purpose of making themselves free as the Small Cantons. To this union, unfortunately, they brought neither strength of purpose nor wisdom. . . . Meanwhile the cities were not idle. Zurich, the capital, gave the order for the whole confederacy to arm, in May 1653. The struggle was short and decisive. For a few weeks Leuenberger's soldiers robbed and murdered where they could, and made feeble and futile attempts upon the small cities of Aargau. Towards the end of May he met, near Herzogenbuchsee, the Bernese troops. . . . A desperate fight ensued, but the insurgents were soon overpowered. . . . This battle ended the insurrection." Leuenberger was beheaded. "No sooner was this revolt of the peasants over than the smouldering fires of religious hatred, zealously fanned by the clergy on both sides, broke out again. . . . Several families of Arth, in Schwyz had been obliged by the Catholics to abjure their faith, or fly from their homes." Zurich took up their cause, and "a general war broke out. . . . Berne first despatched troops to protect her own frontier, and then sent 40 banners to the help of Zurich." The Bernese troops were so careless that they allowed themselves to be surprised (January 14, 1656) by 4,000 Lucerners, in the territory of Villmergen, and were ruinously defeated, losing 800 men and eleven guns. "Soon afterwards a peace was concluded, where everything stood much as it had stood at the beginning of this war, which had lasted only nine weeks. . . . A second insurrection, on a smaller scale than the peasants' revolt, took place in St. Gall in the first years of the 18th century. The Swiss, free in the eyes of the outside world, were, as we have already seen, mere serfs in nearly all the cantons, and such was their condition in the country of Toggenburg. . . . The greater part of the rights over these estates had been sold to the abbot of St. Gall in 1468. In the year 1700, the abbey of St. Gall was presided over by Leodegar Burgisser as sovereign lord. . . . He began by questioning all the commune rights of the Toggenburgers, and called the people his serfs, in order that they might become so used to the name as not to rebel against the hardness of the condition. Even at the time when he became abbot, there was very little, either of right or privilege, remaining to these poor people. . . . When, in 1701, Abbot Leodegar ordered them to build and keep open, at their own expense, a new road through the Hummelwald, crushed as they had been, they turned." After much fruitless remonstrance and appeal they took up arms, supported by the Protestant cantons and attacked by the Catholics, with aid contributed by the nuncio of the pope, himself. "The contest was practically ended on the 25th of July, 1712, by a decisive victory by the Protestants on the battle-field of Villmergen, where they had been beaten by the Lucerne men 56 years before. The battle lasted four hours, and 2,000 Catholics were slain. . . . In the month of August, a general peace was concluded at Aarau, to the great advantage of the conquerors. The five Catholic cantons were obliged to yield their rights over Baden and Rapperswyl, and to associate Berne with themselves in the sovereignty over Thurgau and the Rheinfeld. By this provision the two religions became equalized in those provinces. . . . The Toggenburgers came once more under the jurisdiction of an abbot of St. Gall, but with improved rights and privileges, and under the powerful protection of Zurich and Berne. The Catholic cantons were long in recovering from the expenses of this war. . . . During 86 years from the peace of Aarau, the Swiss were engaged in neither foreign nor civil war, and the disturbances which agitated the different cantons from time to time were confined to a limited stage. But real peace and union were as far off as ever. Religious differences, plots, intrigues, and revolts, kept people of the same canton and village apart, until the building which their forefathers had raised in the early days of the republic was gradually weakened and ready to fall, like a house of cards, at the first blow from France."— H. D. S. Mackenzie, *Switzerland, ch.* 15–16.

Also in: H. Zschokke, *Hist. of Switzerland, ch.* 42–56.

A. D. 1792-1798.—The ferment of the French Revolution.— Invasion and subjugation by the French.— Robbing of the treasure of Berne.— Formation of the Helvetic Republic.—"The world rang with arms and cries of war, with revolutions, battles and defeats. The French promised fraternity and assistance to every people who wished to make themselves free. . . . Their arms advanced victorious through Savoy and the Netherlands and over the Rhine. Nearer and nearer drew the danger around the country of the Alpine people. But the government of the Confederate states showed no foresight in view of the danger. They thought themselves safe behind the shield of their innocence and their neutrality between the contending parties. They had no arms and prepared none; they had no strength and did not draw closer the bands of their everlasting compact. Each canton, timidly and in silence, cared for its own safety, but little for that of the others. . . . All kinds of pamphlets stirred up the people. At Lausanne, Vevey, Rolle and other places, fiery young men, in noisy assemblages, drank success to the arms of emancipated France. Although public order was nowhere disturbed by such proceedings, the gov-

ernment of Berne thought it necessary to put a stop to them by severe measures and to compel silence by wholesome fear. They sent plenipotentiaries supported by an armed force. The guilty and even the innocent were punished. More fled. This silenced Vaud, but did not quell her indignation. The fugitives breathed vengeance. . . . In foreign countries dwelt sadly many of those who, at various times, had been banished from the Confederacy because they had, by word or deed, too boldly or importunately defended the rights and freedom of their fellow-citizens. Several of these addressed the chiefs of the French republic. . . . Such addresses pleased the chiefs of France. They thought in their hearts that Switzerland would be an excellent bulwark for France, and a desirable gate, through which the way would be always open to Italy and Germany. They also knew of and longed for the treasures of the Swiss cities. And they endeavored to find cause of quarrel with the magistrates of the Confederates. . . . Shortly afterwards, came the great general Napoleon Buonaparte, and marched through Savoy into Italy against the forces of the emperor. . . . In a very few months, though in many battles, Buonaparte vanquished the whole power of Austria, conquered and terrified Italy from one end to the other, took the whole of Lombardy and compelled the emperor to make peace. He made Lombardy a republic, called the Cisalpine. When the subjects of Grisons in Valtelina, Chiavenna and Bormio saw this, they preferred to be citizens of the neighboring Cisalpine republic, rather than poor subjects of Grisons. For their many grievances and complaints were rarely listened to. But Buonaparte said to Grisons: 'If you will give freedom and equal rights to these people, they may be your fellow-citizens, and still remain with you. I give you time; decide and send word to me at Milan.'. . . When the last period for decision had passed, Buonaparte became indignant and impatient, and united Valtelina, Chiavenna and Bormio to the Cisalpine republic (22d Oct., 1797). . . . So the old limits of Switzerland were unjustly contracted; four weeks afterwards also, that part of the bishopric of Bâle which had hitherto been respected on account of its alliance with the Swiss, was added to France. Thereat great fear fell on the Confederates. . . . Then the rumor spread that a French army was approaching the frontiers of Switzerland to protect the people of Vaud. They had called for the intervention of France in virtue of ancient treaties. But report said that the French intended to overthrow the Confederate authorities and to make themselves masters of the country. . . . Almost the whole Confederacy was in a state of confusion and dissolution. The governments of the cantons, powerless, distrustful and divided, acted each for itself, without concert. . . . In the mean while a large army of French advanced. Under their generals Brune and Schauenberg they entered the territory of the Confederates, and Vaud, accepting foreign protection, declared herself independent of Berne. Then the governments of Switzerland felt that they could no longer maintain their former dominion. Lucerne and Schauffhausen declared their subjects free and united to themselves. Zurich released the prisoners of Stafa, and promised to ameliorate her constitution to the advantage of the people. . . . Even Freiburg now felt that the change must come for which Chenaur had bled. And the council of Berne received into their number 52 representatives of the country and said: 'Let us hold together in the common danger.' All these reforms and revolutions were the work of four weeks; all too late. Berne, indeed, with Freiburg and Solothurn, opposed her troops to the advancing French army. Courage was not wanting; but discipline, skill in arms and experienced officers. . . . On the very first day of the war (2d March, 1798), the enemy's light troops took Freiburg and Solothurn, and on the fourth (5th March), Berne itself. . . . France now authoritatively decided the future fate of Switzerland and said: 'The Confederacy is no more. Henceforward the whole of Switzerland shall form a free state, one and indivisible, under the name of the Helvetian republic. All the inhabitants, in country as well as city, shall have equal rights of citizenship. The citizens in general assembly shall choose their magistrates, officers, judges and legislative council; the legislative council shall elect the general government; the government shall appoint the cantonal prefects and officers.' The whole Swiss territory was divided into 18 cantons of about equal size. For this purpose the district of Berne was parcelled into the cantons of Vaud, Oberland, Berne and Aragau; several small cantons were united in one; as Uri, Schwyz, Unterwalden and Zug in the canton of Waldstatten; St. Gallen district, Rheinthal and Appenzell in the canton of Santis; several countries subject to the Confederacy, as Baden, Thurgau, Lugano and Bellinzona, formed new cantons. Valais was also added as one; Grisons was invited to join; but Geneva, Muhlhausen and other districts formerly parts of Switzerland, were separated from her and incorporated with France. So decreed the foreign conquerors. They levied heavy war-taxes and contributions. They carried off the tons of gold which Berne, Zurich and other cities had accumulated in their treasure-chambers during their dominion. . . . But the mountaineers of Uri, Nidwalden, Schwyz and Glarus, original confederates in liberty, said: 'In battle and in blood, our fathers won the glorious jewel of our independence; we will not lose it but in battle and in blood.' . . . Then they fought valiantly near Wollrau and on the Schindellegi, but unsuccessfully. . . . But Aloys Reding reassembled his troops on the Rothenthurm, near the Morgarten field of victory. There a long and bloody battle took place. . . . Thrice did the French troops renew the combat: thrice were they defeated and driven back to Aegeri in Zug. It was the second of May. Nearly 2,000 of the enemy lay slain upon that glorious field. Gloriously also fought the Waldstatten on the next day near Arth. But the strength of the heroes bled away in their very victories. They made a treaty, and, with sorrow in their hearts, entered the Helvetian republic. Thus ended the old Bond of the Confederates. Four hundred and ninety years had it lasted; in seventy-four days it was dissolved."—H. Zschokke, *The History of Switzerland, ch.* 57 *and* 60.—"A system of robbery and extortion, more shameless even than that practised in Italy, was put in force against the cantonal governments, against the monasteries, and against private individuals. In compensation for the material losses inflicted upon the country, the new Helvetic Republic, one and in-

divisible, was proclaimed at Aarau. It conferred an equality of political rights upon all natives of Switzerland, and substituted for the ancient varieties of cantonal sovereignty a single national government, composed, like that of France, of a Directory and two Councils of Legislature. The towns and districts which had been hitherto excluded from a share in government welcomed a change which seemed to place them on a level with their former superiors: the mountain-cantons fought with traditional heroism in defence of the liberties which they had inherited from their fathers; but they were compelled, one after another, to submit to the overwhelming force of France, and to accept the new constitution. Yet, even now, when peace seemed to have been restored, and the whole purpose of France attained, the tyranny and violence of the invaders exhausted the endurance of a spirited people. The magistrates of the Republic were expelled from office at the word of a French Commission; hostages were seized; at length an oath of allegiance to the new order was required as a condition for the evacuation of Switzerland by the French army. It was refused by the mountaineers of Unterwalden, and a handful of peasants met the French army at the village of Stanz, on the eastern shore of the Lake of Lucerne (Sept. 8). There for three days they fought with unyielding courage. Their resistance inflamed the French to a cruel vengeance: slaughtered families and burning villages renewed, in this so-called crusade of liberty, the savagery of ancient war."—C. A. Fyffe, *Hist. of Modern Europe, v.* 1, *ch.* 4.—"Geneva at the same time [1798] fell a prey to the ambition of the all-engrossing Republic. This celebrated city had long been an object of their desire; and the divisions by which it was now distracted afforded a favourable opportunity for accomplishing the object. The democratic party loudly demanded a union with that power, and a commission was appointed by the Senate to report upon the subject. Their report, however, was unfavourable; upon which General Gerard, who commanded a small corps in the neighbourhood, took possession of the town; and the Senate, with the bayonet at their throats, formally agreed to a union with the conquering Republic."—Sir A. Alison, *Hist. of Europe*, 1789–1815, *ch.* 25 (*v.* 6).

A. D. 1803-1848.—Napoleon's Act of Mediation.—Independence regained and Neutrality guaranteed by the Congress of Vienna.—Geneva, the Valais, and Neuchâtel.—The Federal Pact of 1815.—The Sonderbund and Civil War.—The Federal Constitution of 1848.—"Bonaparte summoned deputies of both parties to Paris, and after long consultation with them he gave to Switzerland, on the 2d February 1803, a new Constitution termed the Act of Mediation. Old names were restored, and in some cases what had been subject lands were incorporated in the League, which now consisted of 19 Cantons, each having a separate Constitution. The additional six were: St. Gallen, the Grisons, Aargau, Thurgau, Ticino, and Vaud. This was the fifth phase of the Confederation. A Diet was created, there being one deputy to each Canton, but still with limited powers, for he could only vote according to his instructions. The 19 deputies had, however, between them 25 votes, because every deputy who represented a Canton with more than 100,000 inhabitants possessed two votes, and there were six of these Cantons. The Diet met once a year in June, by turns at Zürich, Bern, Luzern, Freiburg, Solothurn, and Basel, the Cantons of which these were the capitals becoming successively directing Cantons. Three were Catholic and three Protestant. The head of the directing Canton for the time being was Landammann of Switzerland and President of the Diet. The Act of Mediation was not acceptable to all parties, and before Switzerland could become entirely independent there was to be one more foreign intervention. The fall of the Emperor Napoleon brought with it the destruction of his work in that country, the neutrality and independence of which were recognized by the Congress of Vienna [see Vienna: Congress of], though upon condition of the maintenance in the Confederation of the new Cantons; and in 1814 the Valais (a Republic allied to the Confederation from the Middle Ages till 1798), Neuchâtel (which, from being subject to the King of Prussia, had been bestowed by Napoleon upon Marshal Berthier), and Geneva (which had been annexed to France under the Directory in 1798, but was now independent and rendered more compact by the addition of some territory belonging to France and Savoy) were added to the existing Cantons. Finally, the perpetual neutrality of Switzerland and the inviolability of her territory were guaranteed by Austria, Great Britain, Portugal, Prussia, and Russia, in an Act signed at Paris on the 20th November 1815. Neuchâtel, however, only really gained its independence in 1857, when it ceased to be a Prussian Principality. The Confederation now consisted of 22 Cantons, and a Federal Pact, drawn up at Zürich by the Diet in 1815, and accepted by the Congress of Vienna, took the place of the Act of Mediation, and remained in force till 1848. It was in some respects a return to the state of things previous to the French Revolution, and restored to the Cantons a large portion of their former sovereignty. . . . Then came an epoch of agitation and discord. The Confederation suffered from a fundamental vice, i. e. the powerlessness of the central authority. The Cantons had become too independent, and gave to their deputies instructions differing widely from each other. The fall of the Bourbons in 1830 had its echo in Switzerland, the patricians of Bern and the aristocratic class in other Cantons lost the ascendency which they had grad-

ually recovered since the beginning of the century, and the power of the people was greatly increased. In several months 12 Cantons, among which were Luzern and Freiburg, modified their Constitutions in a democratic sense, some peaceably, others by revolution. . . . Between 1830 and 1847 there were in all 27 revisions of cantonal Constitutions. To political disputes religious troubles were added. In Aargau the Constitution of 1831, whereby the Grand Council was made to consist of 200 members, half being Protestants and half Catholics, was revised in 1840, and by the new Constitution the members were no longer to be chosen with any reference to creed, but upon the basis of wide popular representation, thus giving a numerical advantage to the Protestants. Discontent arose among the Catholics, and eventually some 2,000 peasants of that faith took up arms, but were beaten by Protestants of Aargau at Villmergen in January 1841, and the consequence was the suppression of the eight convents in that Canton, and the confiscation of their most valuable property. . . . A first result of the suppression of these convents was the fall of the Liberal government of Luzern, and the advent to power of the chiefs of the Ultramontane party in that Canton. Two years later the new government convoked delegates of the Catholic Cantons at Rothen, near Luzern, and there in secret conferences, and under the pretext that religion was in danger, the bases of a separate League or Sonderbund were laid, embracing the four Forest Cantons, Zug, and Freiburg. Subsequently the Valais joined the League, which was clearly a violation not only of the letter but also of the spirit of the Federal Pact. In 1844 the Grand Council of Luzern voted in favour of the Jesuits' appeal to be entrusted with the direction of superior public education, and this led to hostilities between the Liberal and Ultramontane parties. Bands of volunteers attacked Luzern and were defeated, the expulsion of the Jesuits became a burning question, and finally, when the ordinary Diet assembled at Bern in July 1847, the Sonderbund Cantons declared their intention of persevering in their separate alliance until the other Cantons had decreed the re-establishment of the Aargau convents, abandoned the question of the Jesuits, and renounced all modifications of the Pact. These conditions could evidently not be accepted. . . . On the 4th November 1847, after the deputies of the Sonderbund had left the Diet, this League was declared to be dissolved, and hostilities broke out between the two contending parties. A short and decisive campaign of 25 days ensued, Freiburg was taken by the Federal troops, under General Dufour, later Luzern opened its gates, the small Cantons and the Valais capitulated and the strife came to an end. . . . As soon as the Sonderbund was dissolved, it became necessary to proceed to the revision of the Federal Pact."—Sir F. O. Adams and C. D. Cunningham, *The Swiss Confederation, ch.* 1.

A. D. 1848-1890.—The existing Federal Constitution.—On the conclusion of the Sonderbund Secession and War, the task of drawing up a Constitution for the Confederacy was confided to a committee of fourteen members, and the work was finished on the 8th of April, 1848. "The project was submitted to the Cantons, and accepted at once by thirteen and a half; others joined during the summer, and the new Constitution was finally promulgated with the assent of all on the 12th September. Hence arose the seventh and last phase of the Confederation, by the adoption of a Federal Constitution for the whole of Switzerland, being the first which was entirely the work of Swiss, without any foreign influence, although its authors had studied that of the United States. . . . It was natural that, as in process of time commerce and industry were developed, and as the differences between the legislation of the various Cantons became more apparent, a revision of the first really Swiss Constitution should be found necessary. This was proposed both in 1871 and 1872, but the partisans of a further centralization, though successful in the Chambers, were defeated upon an appeal to the popular vote on the 12th May 1872, by a majority of between five and six thousand, and by thirteen Cantons to nine. The question was, however, by no means settled, and in 1874 a new project of revision, more acceptable to the partisans of cantonal independence, was adopted by the people, the numbers being 340,199, to 198,013. The Cantons were about two to one in favour of the revision, 14½ declaring for and 7½ against it. This Constitution bears date the 29th May 1874, and has since been added to and altered in certain particulars."—Sir F. O. Adams and C. D. Cunningham, *The Swiss Confederation, ch.* 1.—"Since 1848 . . . Switzerland has been a federal state, consisting of a central authority, the Bund, and 19 entire and 6 half states, the Cantons; to foreign powers she presents an united front, while her internal policy allows to each Canton a large amount of independence. . . . The basis of all legislative division is the Commune or 'Gemeinde,' corresponding in some slight degree to the English 'Parish.' The Commune in its legislative and administrative aspect or 'Einwohnergemeinde' is composed of all the inhabitants of a Commune. It is self-governing and has the control of the local police; it also administers all matters connected with pauperism, education, sanitary and funeral regulations, the fire brigade, the maintenance of public peace and trusteeships. . . . At the head of the Commune is the 'Gemeinderath,' or 'Communal Council,' whose members are elected from the inhabitants for a fixed period. It is presided over by an 'Ammann,' or 'Mayor,' or 'President.' . . . Above the Commune on the ascending scale comes the Canton. . . . Each of the 19 Cantons and 6 half Cantons is a sovereign state, whose privileges are nevertheless limited by the Federal Constitution, particularly as regards legal and military matters; the Constitution also defines the extent of each Canton, and no portion of a Canton is allowed to secede and join itself to another Canton. . . . Legislative power is in the hands of the 'Volk'; in the political sense of the word the 'Volk' consists of all the Swiss living in the Canton, who have passed their 20th year and are not under disability from

crime or bankruptcy. The voting on the part of the people deals mostly with alterations in the cantonal constitution, treaties, laws, decisions of the First Council involving expenditures of Frs. 100,000 and upward, and other decisions which the Council considers advisable to subject to the public vote, which also determines the adoption of propositions for the creation of new laws, or the alteration or abolition of old ones, when such a plebiscite is demanded by a petition signed by 5,000 voters. . . . The First Council (Grosse Rath) is the highest political and administrative power of the Canton. It corresponds to the 'Chamber' of other countries. Every 1,300 inhabitants of an electoral circuit send one member. . . . The Kleine Rath or special council (corresponding to the 'Ministerium' of other continental countries) is composed of three members and has three proxies. It is chosen by the First Council for a period of two years. It superintends all cantonal institutions and controls the various public boards. . . . The populations of the 22 sovereign Cantons constitute together the Swiss Confederation. . . . The highest power of the Bund is exercised by the 'Bundesversammlung,' or Parliament, which consists of two chambers, the 'Nationalrath,' and the 'Ständerath.' The Nationalrath corresponds to the English House of Commons, and the Ständerath partially to the House of Lords; the former represents the Swiss people, the latter the Cantons. The Nationalrath consists of 145 members. . . . Every Canton or half Canton must choose at least one member; and for the purpose of election Switzerland is divided into 49 electoral districts. The Nationalrath is triennial. . . . The Ständerath consists of 44 members, each Canton having two representatives and each half Canton one. . . . A bill is regarded as passed when it has an absolute majority in both chambers, but it does not come into force until either a plebiscite is not demanded for a space of three months, or, if it is demanded (for which the request of 30,000 voters is necessary) the result of the appeal to the people is in favor of the bill. This privilege of the people to control the decision of their representatives is called Das Referendum [see REFERENDUM]. . . . The highest administrative authority in Switzerland is the Bundesrath, composed of seven members, which [like the Bundesversammlung] . . . meets in Bern. Its members are chosen by the Bundesversammlung and the term of office is ten years. . . . The president of the Confederation (Bundespresident) is chosen by the Bundesversammlung from the members of the Bundesrath for one year. . . . The administration of justice, so far as it is exercised by the Bund, is entrusted to a Court, the Bundesgericht, consisting of nine members."—P. Hauri, *Sketch of the Const. of Switzerland* (*in Strickland's "The Engadine"*).

SYBARIS.—SYBARITES.—Sybaris and Kroton were two ancient Greek cities, founded by Achæan colonists, on the coast of the gulf of Tarentum, in southern Italy. "The town of Sybaris was planted between two rivers, the Sybaris and the Krathis (the name of the latter borrowed from a river of Achaia); the town of Kroton about twenty-five miles distant, on the river Æsarus. . . . The fatal contest between these two cities, which ended in the ruin of Sybaris, took place in 510 B. C., after the latter had subsisted in growing prosperity for 210 years. . . . We are told that the Sybarites, in that final contest, marched against Kroton with an army of 300,000 men. . . . The few statements which have reached us respecting them touch, unfortunately, upon little more than their luxury, fantastic self-indulgence and extravagant indolence, for which qualities they have become proverbial in modern times as well as in ancient. Anecdotes illustrating these qualities were current, and served more than one purpose in antiquity."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22.

SYBOTA, Naval Battle of.—Fought, B. C. 432, between the fleets of Corinth and Corcyra, in the quarrel which led up to the Peloponnesian War. The Athenians had ten ships present, as allies of the Corcyreans, intending only to watch affairs, but at the end they were drawn into the fight. The Corcyreans were beaten.—Thucydides, *History, bk.* 1, *sect.* 46.

SYCOPHANTS.—"Not until now [about B. C. 428, when the demagogue Cleon rose to power at Athens] did the activity of the Sycophants attain to its full height; a class of men arose who made a regular trade of collecting materials for indictments, and of bringing their fellow citizens before a legal tribunal. These denunciations were particularly directed against those who were distinguished by wealth, birth and services, and who therefore gave cause for suspicion; for the informers wished to prove themselves zealous friends of the people and active guardians of the constitution. . . . Intrigues and conspiracies were suspected in all quarters, and the popular orators persuaded the citizens to put no confidence in any magistrate, envoy or commission, but rather to settle everything in full assembly and themselves assume the entire executive. The Sycophants made their living out of this universal suspicion. . . . They threatened prosecutions in order thus to extort money from guilty and innocent alike; for even among those who felt free from guilt were many who shunned a political prosecution beyond all other things, having no confidence in a jury."—E. Curtius, *Hist. of Greece, bk.* 4, *ch.* 2 (*v.* 3).

SYLLABARIES.—"A good deal of the [Assyrian] literature was of a lexical and grammatical kind, and was intended to assist the Semitic student in interpreting the old Accadian texts. Lists of characters were drawn up with their pronunciation in Accadian and the translation into Assyrian of the words represented by them. Since the Accadian pronunciation of a character was frequently the phonetic value attached to it by the Assyrians, these syllabaries, as they have been termed—in consequence of the fact that the cuneiform characters denoted syllables and not letters—have been of the greatest possible assistance in the decipherment of the inscriptions."—A. H. Sayce, *Assyria, its Princes, Priests and People, ch.* 4.

SYMMACHIA.—An offensive and defensive alliance between two states was so called by the Greeks.

SYMMORIÆ, The.—"In the archonship of Nausinicus in Olymp. 100,3 (B. C. 378) the institution of what were called the symmoriæ (collegia, or companies), was introduced [at Athens] in relation to the property taxes. The object of this institution, as the details of the arrangement themselves show, was through the joint liability of larger associations to confirm the sense of individual obligation to pay the taxes, and to secure their collection, and also, in case of necessity, to cause those taxes which were not received at the proper time to be advanced by the most wealthy citizens."—A. Boeckh, *Public Economy of the Athenians* (*tr. by Lamb*), *bk.* 4, *ch.* 9.

SYMPOSIUM.—The Symposium of the ancient Greeks was that part of a feast which ensued when the substantial eating was done, and which was enlivened with wine, music, conversation, exhibitions of dancing, etc.—C. C. Felton, *Greece, Ancient and Modern, course* 2, *lect.* 5.

SYRACUSE: B. C. 734.—The Founding of the city.—"Syracuse was founded the year after Naxos, by Corinthians, under a leader named Archias, a Heracleid, and probably of the ruling caste, who appears to have been compelled to quit his country to avoid the effects of the indignation which he had excited by a horrible outrage committed in a family of lower rank. . . . Syracuse became, in course of time, the parent of other Sicilian cities, among which Camarina was the most considerable. . . . Forty-five years after Syracuse, Gela was founded by a band collected from Crete and Rhodes, chiefly from Lindus, and about a century later (B. C. 582) sent forth settlers to the banks of the Acragas, where they built Agrigentum."—C. Thirlwall, *Hist. of Greece, ch.* 12.—The first settlement at Syracuse was on the islet of Ortygia. "Ortygia, two English miles in circumference, was separated from the main island only by a narrow channel, which was bridged over when the city was occupied and enlarged by Gelôn in the 72nd Olympiad, if not earlier. It formed only a small part, though the most secure and best-fortified part, of the vast space which the city afterwards occupied. But it sufficed alone for the inhabitants during a considerable time, and the present city in its modern decline has again reverted to the same modest limits. Moreover, Ortygia offered another advantage of not less value. It lay across the entrance of a spacious harbour, approached by a narrow mouth, and its fountain of Arethusa was memorable in antiquity both for the abundance and goodness of its water."—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 22.

B. C. 480.—Defeat of the Carthaginians at Himera. See SICILY: B. C. 480.

B. C. 415-413.—Siege by the Athenians.—The Greek city of Syracuse, in Sicily, having been founded and built up by colonization from Corinth, naturally shared the deep hatred of Athens which was common among the Dorian Greeks, and which the Corinthians particularly found many reasons to cherish. The feeling at Athens was reciprocal, and, as the two cities grew supreme in their respective spheres and arrogant with the consciousness of superior power, mutual jealousies fed their passion of hostility, although nothing in their affairs, either politically or commercially, brought them really into conflict with one another. But Syracuse, enforcing her supremacy in Sicily, dealt roughly with the Ionian settlements there, and Athens was appealed to for aid. The first call upon her was made (B. C. 428) in the midst of the earlier period of the Peloponnesian War, and came from the people of Leontini, then engaged in a struggle with Syracuse, into which other Sicilian cities had been drawn. The Athenians were easily induced to respond to the call, and they sent a naval force which took part in the Leontine War, but without any marked success. The result was to produce among the Sicilians a common dread of Athenian interference, which led them to patch up a general peace. But fresh quarrels were not long in arising, in the course of which Leontini was entirely destroyed, and another Sicilian city, Egesta, which Athens had before received into her alliance, claimed help against Syracuse. This appeal reached the Athenians at a time (B. C. 416) when their populace was blindly following Alcibiades, whose ambition craved war, and who chafed under the restraints of the treaty of peace with Sparta which Nicias had brought about. They were carried by his influence into the undertaking of a great expedition of conquest, directed against the Sicilian capital—the most costly and formidable which any Greek state had ever fitted out. In the summer of B. C. 415 the whole force assembled at Corcyra and sailed across the Ionian sea to the Italian coast and thence to Sicily. It consisted of 134 triremes, with many merchant, ships and transports, bearing 5,100 hoplites, 480 bowmen and 700 Rhodian slingers. The commanders were Nicias, Lamachus and Alcibiades. On the arrival of the expedition in Sicily a disagreement among the generals made efficient action impossible and gave the Syracusans time to prepare a stubborn resistance. Meantime the enemies of Alcibiades

at Athens had brought about a decree for his arrest, on account of an alleged profanation of the sacred Eleusinian mysteries, and, fearing to face the accusation, he fled, taking refuge at Sparta, where he became the implacable enemy of his country. Three months passed before Nicias, who held the chief command, made any attempt against Syracuse. He then struck a single blow, which was successful, but which led to nothing; for the Athenian army was withdrawn immediately afterwards and put into winter quarters. In the following spring the regular operations of a siege and blockade were undertaken, at sea with the fleet and on land by a wall of circumvallation. The undertaking promised well at first and the Syracusans were profoundly discouraged. But Sparta, where Alcibiades worked passionately in their favor, sent them a general, Gylippus, who proved to be equal to an army, and promised reinforcements to follow. The more vigorous Athenian general, Lamachus, had been killed, and Nicias, with incredible apathy, suffered Gylippus to gather up a small army in the island and to enter Syracuse with it, in defiance of the Athenian blockade. From that day the situation was reversed. The besieged became the assailants and the besiegers defended themselves. Nicias sent to Athens for help and maintained his ground with difficulty through another long winter, until a second great fleet and army arrived, under the capable general Demosthenes, to reinforce him. But it was too late. Syracuse had received powerful aid, in ships and men, from Corinth, from Sparta and from other enemies of Athens, had built a navy and trained sailors of her own, and was full of confident courage. The Athenians were continually defeated, on land and sea, and hoped for nothing at last but to be able to retreat. Even the opportunity to do that was lost for them in the end by the weakness of Nicias, who delayed moving on account of an eclipse, until his fleet was destroyed in a final sea-fight and the island roads were blocked by an implacable enemy. The flight when it was undertaken proved a hopeless attempt, and there is nothing in history more tragical than the account of it which is given in the pages of Thucydides. On the sixth day of the struggling retreat the division under Demosthenes gave up and surrendered to the pursuers who swarmed around it. On the next day Nicias yielded with the rest, after a terrible massacre at the river Assinarus. Nicias and Demosthenes were put to the sword, although Gylippus interceded for them. Their followers were imprisoned in the Syracusan quarries. "There were great numbers of them and they were crowded in a deep and narrow place. At first the sun by day was still scorching and suffocating, for they had no roof over their heads, while the autumn nights were cold, and the extremes of temperature engendered violent disorders. Being cramped for room they had to do everything on the same spot. The corpses of those who died from their wounds, exposure to the weather, and the like, lay heaped one upon another. The smells were intolerable; and they were at the same time afflicted by hunger and thirst. During eight months they were allowed only about half a pint of water and a pint of food a day. Every kind of misery which could befall man in such a place befell them. This was the condition of all the captives for about ten weeks. At length the Syracusans sold them, with the exception of the Athenians and of any Sicilian or Italian Greeks who had sided with them in the war. The whole number of the public prisoners is not accurately known, but they were not less than 7,000. Of all the Hellenic actions which took place in this war, or indeed of all Hellenic actions which are on record, this was the greatest — the most glorious to the victors, the most ruinous to the vanquished; for they were utterly and at all points defeated, and their sufferings were prodigious. Fleet and army perished from the face of the earth; nothing was saved, and of the many who went forth few returned home. Thus ended the Sicilian expedition."— Thucydides, *History* (*tr. by Jowett*), *bk.* 6–7.

B. C. 397-396.—Dionysius and the Carthaginians.—Eighteen years after the tragic deliverance of Syracuse from the besieging host and fleet of the Athenians, the Sicilian capital experienced a second great peril and extraordinary escape of like kind. The democratic government of Syracuse had meantime fallen and a new tyrant had risen to power. Dionysius, who began life in a low station, made his way upward by ruthless energy and cunning, practising skilfully the arts of a demagogue until he had won the confidence of the people, and making himself their master in the end. When the sovereignty of Dionysius had acquired firmness and the fortifications and armament of his city had been powerfully increased, it suited his purposes to make war upon the Carthaginians, which he did, B. C. 397. He attacked Motye, which was the most important of their cities in Sicily, and took it after a siege of some months' duration, slaughtering and enslaving the wretched inhabitants. But his triumph in this exploit was brief. Imilkon, or Himilco, the Carthaginian commander, arrived in Sicily with a great fleet and army and recaptured Motye with ease. That done he made a rapid march to Messene, in the northeastern extremity of the island, and gained that city almost without a blow. The inhabitants escaped, for the most part, but the town is said to have been reduced to an utter heap of ruins — from which it was subsequently rebuilt. From Messene he advanced to Syracuse, Dionysius not daring to meet him in the field. The Syracusan fleet, encountering that of the Carthaginians, near Katana, was almost annihilated, and when the vast African armament, numbering more than seventeen hundred ships of every description, sailed into the Great Harbor of Syracuse, there was nothing to oppose it. The city was formidably invested, by land and sea, and its fate would have appeared to be sealed. But the gods interposed, as the ancients thought, and avenged themselves for insults which the Carthaginians had put upon them. Once more the fatal pestilence which had smitten the latter twice before in their Sicilian Wars appeared and their huge army was palsied by it. "Care and attendance upon the sick, or even interment of the dead, became impracticable; so that the whole camp presented a scene of deplorable agony, aggravated by the horrors and stench of

150,000 unburied bodies. The military strength of the Carthaginians was completely prostrated by such a visitation. Far from being able to make progress in the siege, they were not even able to defend themselves against moderate energy on the part of the Syracusans; who . . . were themselves untouched by the distemper." In this situation the Carthaginian commander basely deserted his army. Having secretly bribed Dionysius to permit the escape of himself and the small number of native Carthaginians in his force, he abandoned the remainder to their fate (B. C. 394). Dionysius took the Iberians into his service; but the Libyans and other mercenaries were either killed or enslaved. As for Imilkon, soon after his return to Carthage he shut himself in his house and died, refusing food. The blow to the prestige of Carthage was nearly fatal, producing a rebellion among her subjects which assumed a most formidable character; but it lacked capable command and was suppressed.—G. Grote, *Hist. of Greece, pt.* 2, *ch.* 92.

B. C. 394-384.—Conquests and dominion of Dionysius.—"The successful result of Dionysios' first Punic War seems to have largely spread his fame in Old Greece," while it increased his prestige and power at home. But "he had many difficulties. He too, like the Carthaginians, had to deal with a revolt among his mercenaries, and he had to give up to them the town of Leontinoi. And the people of Naxos and Katanê drove out by himself, and the people of Messana, driven out by Himilkôn, were wandering about, seeking for dwelling-places. He restored Messana, but he did not give it back to its old inhabitants. He peopled it with colonists from Italy and from Old Greece. . . . He also planted a body of settlers from the old Messenian land in Peloponnêsos," at Tyndaris. "Thus the north-eastern corner of Sicily was held by men who were really attached to Dionysios. And he went on further to extend his power along the north coast. . . . The Sikel towns were now fast taking to Greek ways, and we hear of common laws and tyrants among them, just as among the Greeks. Agyris, lord of Agyrium, was said to be the most powerful prince in Sicily after Dionysios himself. . . . With him Dionysios made a treaty, and also with other Sikel lords and cities. But he attacked the new Sikel town of Tauromenion, and was disastrously repulsed. This discomfiture at Tauromenion checked the plans of Dionysios for a while. Several towns threw off his dominion. . . . And the Carthaginians also began to stir again. In B. C. 392 their general Magôn, seemingly without any fresh troops from Africa, set out from Western Sicily to attack Messana." But Dionysius defeated him, and the next year he made peace with the Carthaginians, as one of the conditions of which he captured Tauromenion in 392. "Dionysios was now at the height of his power in Sicily . . . He commanded the whole east coast and the greater part of the north and south coasts. Dionysios and Carthage might be said to divide Sicily between them, and Dionysios had the larger share." Being at peace with the Carthaginians, he now turned his arms against the Greek cities in Southern Italy, and took Kaulônia, Hippônion, and Rhêgion (B. C. 387), making himself, "beyond all doubt, the chief power, not only in Sicily, but in Greek Italy also." Three years later (B. C. 384) Dionysios sent a splendid embassy to the Olympic festival in Greece. "Lysias called on the assembled Greeks to show their hatred of the tyrant, to hinder his envoys from sacrificing or his chariots from running. His chariots did run; but they were all defeated. Some of the multitude made an attack on the splendid tents of his envoys. He had also sent poems of his own to be recited; but the crowd would not hear them."—E. A. Freeman, *The Story of Sicily, ch.* 10.

B. C. 383.—War with Carthage. See Sicily: B. C. 383.

B. C. 344.—Fall of the Dionysian tyranny.—The elder Dionysius,—he who climbed by cunning demagoguery from an obscure beginning in life to the height of power in Syracuse, making himself the typical tyrant of antiquity,—died in 367 B. C. after a reign of thirty-eight years. He was succeeded by his son, Dionysius the younger, who inherited nothing in character from his father but his vices and his shameless meannesses. For a time the younger Dionysius was largely controlled by the admirable influence of Dion, brother-in-law and son-in-law of the elder tyrant (who had several wives and left several families). Dion had Plato for his teacher and friend, and strove with the help of the great Athenian—who visited Sicily thrice—to win the young tyrant to a life of virtue and to philosophical aims. The only result was to finally destroy the whole influence with which they began, and Dion, ere long, was driven from Syracuse, while Dionysius abandoned himself to debaucheries and cruelties. After a time Dion was persuaded to lead a small force from Athens to Syracuse and undertake the overthrow of Dionysius. The gates of Syracuse were joyfully opened to him and his friends, and they were speedily in possession of the whole city except the island-stronghold of Ortygia, which was the entrenchment of the Dionysian tyranny. Then ensued a protracted and desperate civil war in Syracuse, which half ruined the magnificent city. In the end Ortygia was surrendered, Dionysius having previously escaped with much treasure to his dependent city of Lokri, in southern Italy. Dion took up the reins of government, intending to make himself what modern times would call a constitutional monarch. He wished the people to have liberty, but such liberty as a philosopher would find best for them. He was distrusted,—misunderstood,—denounced by demagogues, and hated, at last, as bitterly as the tyrants who preceded him. His high-minded ambitions were all disappointed and his own character suffered from the disappointment. At the end of a year of sovereignty he was assassinated by one of his own Athenian intimates, Kallippus, who secured the goodwill of the army and made himself despot. The reign of Kallippus was maintained for something more than a year, and he was then driven out by Hipparinus, one of the sons of Dionysius the elder, and half-brother to the younger of that name. Hipparinus was presently murdered and another brother, Nysæus, took his place. Then Nysæus, in turn, was driven out by Dionysius, who returned from Lokri and re-established his power. The condition of Syracuse under the restored despotism of Dionysius was worse than it ever had been in the past, and the great city seemed likely to perish. At the last extremity of suffering, in

344 B. C., its people sent a despairing appeal to Corinth (the mother-city of Syracuse) for help. The Corinthians responded by despatching to Sicily a small fleet of ten triremes and a meagre army of 1,200 men, under Timoleon. It is the first appearance in history of a name which soon shone with immortality; for Timoleon proved himself to be one of the greatest and the noblest of Greeks. He found affairs in Sicily complicated by an invasion of Carthaginians, co-operating with one Hiketas, who had made himself despot of Leontini and who hoped to become master of Syracuse. By skilfully using the good fortune which the gods were believed to have lavished upon his enterprise, Timoleon, within a few months, had defeated Hiketas in the field; had accepted the surrender of Dionysius in Ortygia and sent the fallen tyrant to Corinth; had caused such discouragement to the Carthaginians that they withdrew fleet and army and sailed away to Africa. The whole city now fell quickly into his hands. His first act was to demolish the stronghold of tyranny in Ortygia and to erect courts of justice upon its site. A free constitution of government was then re-established, all exiled citizens recalled, a great immigration of Greek inhabitants invited, and the city revivified with new currents of life. The tyranny in other cities was overthrown and all Sicily regenerated. The Carthaginians returning were defeated with fearful losses in a great battle on the Krimesus, and a peace made with them which narrowed their dominion in Sicily to the region west of the Halykus. All these great achievements completed, Timoleon resigned his generalship, declined every office, and became a simple citizen of Syracuse, living only a few years, however, to enjoy the grateful love and respect of its people.—G. Grote, *Hist. of Greece, pt. 2, ch. 84–85.*

Also in: Plutarch, *Timoleon.*

B. C. 317-289.—Under Agathokles.—A little more than twenty years after Timoleon expelled the brood of the tyrant Dionysius from Syracuse, and liberated Sicily, his work was entirely undone and a new and worse despot pushed himself into power. This was Agathokles, who rose, like his prototype, from a humble grade of life, acquired wealth by a lucky marriage, was trusted with the command of the Syracusan army — of mercenaries, chiefly — obtained a complete ascendancy over these soulless men, and then turned them loose upon the city, one morning at daybreak (B. C. 317), for a carnival of unrestrained riot and massacre. "They broke open the doors of the rich, or climbed over the roofs, massacred the proprietors within, and ravished the females. They chased the unsuspecting fugitives through the streets, not sparing even those who took refuge in the temples. . . . For two days Syracuse was thus a prey to the sanguinary, rapacious, and lustful impulses of the soldiery; 4,000 citizens had been already slain, and many more were seized as prisoners. The political purposes of Agathokles, as well as the passions of the soldiers, being then sated, he arrested the massacre. He concluded this bloody feat by killing such of his prisoners as were most obnoxious to him, and banishing the rest. The total number of expelled or fugitive Syracusans is stated at 6,000." In a city so purged and terrorized, Agathokles had no difficulty in getting himself proclaimed by acclamation sole ruler or autocrat, and he soon succeeded in extending his authority over a large part of Sicily. After some years he became involved in war with the Carthaginians, and suffered a disastrous defeat on the Himera (B. C. 310). Besieged in Syracuse, as a consequence, he resorted to bolder tactics than had been known before his time and "carried the war into Africa." His invasion of Carthage was the first that the Punic capital ever knew, and it created great alarm and confusion in the city. The Carthaginians were repeatedly beaten, Tunes, and other dependent towns, as well as Utica, were captured, the surrounding territory was ravaged, and Agathokles became master of the eastern coast. But all his successes gained him no permanent advantage, and, after four years of wonderful campaigning in Africa, he saw no escape from the difficulties of his situation except by basely stealing away from his army, leaving his two sons to be killed by the furious soldiers when they discovered his flight. Returning to Sicily, the wonderfully crafty and unscrupulous abilities which he possessed enabled him to regain his power and to commit outrage after outrage upon the people of Syracuse, Egesta, and other towns, until his death in 289 B. C.—G. Grote, *Hist. of Greece, pt. 2, ch. 97.*

B. C. 212.—Siege by the Romans. See Punic Wars: The Second.

A. D. 279.—Sacked by Franks.—The Emperor Probus, who expelled from Gaul, A. D. 277, the invaders then beginning to swarm upon the hapless province, removed a large body of captive Franks to the coast of Pontus, on the Euxine, and settled them there. The restive barbarians soon afterwards succeeded (A. D. 279) in capturing a fleet of vessels, in which they made their way to the Mediterranean, plundering the shores and islands as they passed towards the west. "The opulent city of Syracuse, in whose port the navies of Athens and Carthage had formerly been sunk, was sacked by a handful of barbarians, who massacred the greatest part of the trembling inhabitants." This was the crowning exploit of the escaping Franks, after which they continued their voyage.—E. Gibbon, *Decline and Fall of the Roman Empire, ch. 12.*

SYRIA.—"Between the Arabian Desert and the eastern coast of the Levant there stretches — along almost the full extent of the latter, or for nearly 400 miles — a tract of fertile land varying from 70 to 100 miles in breadth. This is so broken up by mountain range and valley, that it has never all been brought under one native government; yet its well-defined boundaries — the sea on the west, Mount Taurus on the north, and the desert to east and south — give it a certain unity, and separate it from the rest of the world. It has rightly, therefore, been covered by one name, Syria. Like that of Palestine, the name is due to the Greeks, but by a reverse process. As 'Palestina,' which is really Philistina, was first the name of only a part of the coast, and thence spread inland to the desert, so Syria, which is a shorter form of Assyria, was originally applied by the Greeks to the whole of the Assyrian Empire from the Caucasus to the

Levant, then shrank to this side of the Euphrates, and finally within the limits drawn above. . . . Syria is the north end of the Arabian world. . . . The population of Syria has always been essentially Semitic [see SEMITES]. . . . Syria's position between two of the oldest homes of the human race made her the passage for the earliest intercourse and exchanges of civilisation. It is doubtful whether history has to record any great campaigns . . . earlier than those which Egypt and Assyria waged against each other across the whole extent of Syria [see EGYPT: ABOUT B. C. 1700–1400, to B. C. 670–525]. . . . The Hittites came south from Asia Minor over Mount Taurus, and the Ethiopians came north from their conquest of the Nile. Towards the end of the great duel between Assyria and Egypt, the Scythians from north of the Caucasus devastated Syria. When the Babylonian Empire fell, the Persians made her a province of their empire, and marched across her to Egypt [see EGYPT: B. C. 525–332]. At the beginning of our era, she was overrun by the Parthians. The Persians invaded her a second time, just before the Moslem invasion of the seventh century [see MAHOMETAN CONQUEST: A. D. 632–639]; she fell, of course, under the Seljuk Turks in the eleventh [see TURKS: A. D. 1063–1073, and after]; and in the thirteenth and fourteenth the Mongols thrice swept through her. Into this almost constant stream of empires and races, which swept through Syria from the earliest ages, Europe was drawn under Alexander the Great [see MACEDONIA: B. C. 334–330, and after]. . . . She was scoured during the following centuries by the wars of the Seleucids and Ptolemies, and her plains were planted all over by their essentially Greek civilisation [see SELEUCIDÆ; and JEWS: B. C. 332–167]. Pompey brought her under the Roman Empire, B. C. 65 [see ROME: B. C. 69–63; and JEWS: B. C. 166–40], and in this she remained till the Arabs took her, 634 A. D. [see MAHOMETAN CONQUEST: A. D. 632–639]. The Crusaders held her for a century, 1098–1187, and parts of her for a century more [see CRUSADES: A. D. 1096–1099]. . . . Napoleon the Great made her the pathway of his ambition towards that empire on the Euphrates and Indus whose fate was decided on her plains, 1799 [see FRANCE: A. D. 1798–1799 (AUGUST—AUGUST)]. Since then, Syria's history has mainly consisted in a number of sporadic attempts on the part of the Western world to plant upon her both their civilisation and her former religion."—George Adam Smith, *Historical Geography of the Holy Land*, *bk.* 1, *ch.* 1.

SYRTIS MAJOR AND SYRTIS MINOR.—These were the names given by the Greeks to the two gulfs (or rather the two corners of the one great gulf) which deeply indent the coast of North Africa. Syrtis Major, or the Greater Syrtis, is now known as the Gulf of Sidra; Syrtis Minor as the Gulf of Khabs, or Cabes.

SYSSITIA, The.—"The most important feature in the Cretan mode of life is the usage of the Syssitia, or public meals, of which all the citizens partook, without distinction of rank or age. The origin of this institution cannot be traced: we learn however from Aristotle that it was not peculiar to the Greeks, but existed still earlier in the south of Italy among the Œnotrians. . . . At Sparta [which retained this institution, in common with Crete, to the latest times], the entertainment was provided at the expense, not of the state, but of those who shared it. The head of each family, as far as his means reached, contributed for all its members; but the citizen who was reduced to indigence lost his place at the public board. The guests were divided into companies, generally of fifteen persons, who filled up vacancies by ballot, in which unanimous consent was required for every election. No member, not even the king, was permitted to stay away, except on some extraordinary occasion, as of a sacrifice, or a lengthened chase, when he was expected to send a present to the table: such contributions frequently varied the frugal repast."—C. TAGOS, OR TAGUS, The Greek title. See DEMIURGI.

TAHITI.—This is the central and principal island of the Society group. It is of considerable size, having an area of 600 square miles. Its mountainous scenery is impressive, its climate delightful and healthy, its tropical productions lavish, and it has the repute of being one of the most romantic and charming spots of the world. Ten smaller islands, contiguous to it, form the archipelago. The French have controlled it since 1842, although Queen Pomare IV. is nominally still the reigning sovereign. See POLYNESIA.

TAIFALÆ, The.—In the fourth century, "the Taifalæ inhabited that part of the province of Dacia which is now called Wallachia. They . . . subsequently accompanied the Visigoths in their migrations westward, and settled on the south side of the Liger, in the country of the Pictavi, where they were in the time of Gregory of Tours, who calls them Theiphali, and their district Theiphalia."—W. Smith, *Note to Gibbon's Decline and Fall of the Roman Empire, ch.* 26.

TAILLE AND GABELLE, The.—Under the old régime, before the Revolution, "the chief item in the French budget was the taille [analagous to the English word 'tally']. This was a direct tax imposed upon the property of those assessed, and in theory it was in proportion to the amount they possessed. But in the most of France it fell chiefly upon personal property. It was impossible that with the most exact and honest system it should be accurately apportioned, and the system that was in force was both loose and dishonest. The local assessors exempted some and overtaxed others; they released their friends or their villages, and imposed an increased burden upon others, and, to a very large extent, exemptions or reductions were obtained by those who had money with which to bribe or to litigate. The bulk of this tax fell upon the peasants. From it, indeed, a large part of the population, and the part possessing the most of the wealth of the country, was entirely exempt. The nobility were free from any personal tax, and under this head were probably included 400,000 people. The clergy were free, almost all of the officials of every kind, and the members of many professions and trades. Many of the cities had obtained exemption from the taille by the payment of a sum of money, which was either nominal or very moderate. Only laborers and peasants, it was said, still remained subject to it. Out of 11,000,000 people [in the 17th century] in those portions of France where the taille was a personal tax, probably 2,500,000 were exempt. . . . Next to the taille, the most important tax was the gabelle, and, though less onerous, it also produced a vast amount of misery. The gabelle was a duty on salt, and it was farmed by the government. The burden of an excessive tax was increased by the cupidity of those who bought the right to collect its proceeds. The French government retained a monopoly of salt, much like that which it now possesses of tobacco, but the price which it charged for this article of necessity was such, that the States of Normandy declared that salt cost the people more than all the rest of their food. In some provinces the price fixed imposed a duty of about 3,000 per cent., and salt sold for nearly ten sous a pound, thirty times its present price in France, though it is still subject to a considerable duty. From this tax there were no personal exemptions, but large portions of the country were not subject to the gabelle. Brittany was free, Guienne, Poitou, and several other provinces were wholly exempt or paid a trifling subsidy. About one third of the population were free from this duty, and the exemption was so valued that a rumor that the gabelle was to be imposed was sufficient to excite a local insurrection. Such a duty, on an article like salt, was also necessarily much more oppressive for the poor than the rich. As the exorbitant price would compel many to go without the commodity, the tax was often rendered a direct one. The amount of salt was fixed which a family should consume, and this they were forced to take at the price established by the government. . . . The gabelle was farmed for about 20,000,000 livres, and to cover the expenses and profits of the farmers probably 27,000,000 in all was collected from the people. A family of six would, on an average, pay the equivalent of ninety francs, or about eighteen dollars a year, for this duty."—J. B. Perkins, *France under Mazarin, ch.* 18 (*v.* 2).—"Not only was the price of salt rendered exorbitant by the tax, but its consumption at this exorbitant price was compulsory. Every human being above seven years of age was bound to consume seven pounds of salt per annum, which salt, moreover, was to be exclusively used with food or in cooking. To use it for salting meat, butter, cheese, &c., was prohibited under severe penalties. The average price of salt [in the reign of Louis XIV.] over two-thirds of the country, was a shilling a pound. To buy salt of any one but the authorised agents of the Government was punished by fines of 200, 300, and 500 livres (about £80 of our money), and smugglers were punished by imprisonment, the galleys, and death. . . . The use of salt in agriculture was rendered impossible, and it was forbidden, under a penalty of 300 livres (about £50), to take a beast to a salt-marsh, and allow it to drink sea-water. Salted hams and bacon were not allowed to enter the country. The salt used in the fisheries was supervised and guarded by such a number of vexatious regulations that one might suppose the object of the Government was to render that branch of commerce impossible. . . . But even the Gabelle was less onerous than the Taille. The amount of the Taille was fixed in the secret councils of the Government, according to the exigencies of the financial situation every year. The thirty-two Intendants of the provinces were informed of the amount which their districts were expected to forward to the Treasury. Each Intendant then made known to the Elections (sub-districts) of his Généralité the sum which they had to find, and the officers called Elus apportioned to each parish its quota of contribution. Then, in the parishes, was set in motion a system of blind, stupid, and

remorseless extortion, of which one cannot read even now without a flash of indignation. First of all, the most flagitious partiality and injustice presided over the distribution of the tax. Parishes which had a friend at Court or in authority got exempt, and with them the tax was a mere form. But these exemptions caused it to fall with more crushing weight on their less fortunate neighbours, as the appointed sum must be made up, whoever paid it. The inequalities of taxation almost surpass belief. . . . But this was far from being the worst feature. The chief inhabitants of the country villages were compelled to fill, in rotation, the odious office of collectors. They were responsible for the gross amount to be levied, which they might get as they could out of their parishioners. . . . Friends, or persons who had powerful patrons, were exempted; while enemies, or the unprotected, were drained of their last farthing. . . . The collectors went about, we are told, always keeping well together for fear of violence, making their visits and perquisitions, and met everywhere with a chorus of imprecations. As the Taille was always in arrear, on one side of the street might be seen the collectors of the current year pursuing their exactions, while on the other side were those of the year previous engaged on the same business, and further on were the agents of the Gabelle and other taxes employed in a similar manner. From morning to evening, from year's beginning to year's ending, they tramped, escorted by volleys of oaths and curses, getting a penny here and a penny there; for prompt payment under this marvellous system was not to be thought of."—J. C. Morison, *The Reign of Louis XIV.* (*Fortnightly Rev., April*, 1874, *v.* 21). — Under Colbert (1661–1683), in the reign of Louis XIV., both the taille (or villein tax, as it was often called) and the gabelle were greatly reduced, and the iniquities of their distribution and collection were much lessened.—H. Martin, *Hist. of France: Age of Louis XIV.*, *v.* 1, *ch.* 1. — For an intimation of the origin of the taille, see FRANCE: A. D. 1453–1461.

TALENT, Attic, Babylonian, &c. — "Not only in Attica, but in almost all the Hellenic States, even in those which were not in Greece but were of Hellenic origin, money was reckoned by talents of sixty minas, the mina at a hundred drachmas, the drachma at six oboli. At Athens the obolus was divided into eight chalci . . . the chalcûs into seven lepta. Down to the half obolus, the Athenian money was, in general, coined only in silver; the dichalchon, or quarter obolus, in silver or copper; the chalcûs and the smaller pieces only in copper. . . . The value of the more ancient Attic silver talent, silver value reckoned for silver value, will be 1,500 thlr. Prussian currency; of the mina, 25 thaler; of the drachma, 6 gute groschen; of the obolus 1 g. gr., — equivalent to $1.026, $17.10, 71.1 cts., 2.85 cts. respectively. . . . Before the time of Solon, the Attic money was heavier; also the commercial weight was heavier than that by which money was weighed. One hundred new drachmas were equivalent to 72–73 ancient drachmas; but the ancient weight remained with very little alteration as commercial weight, to which, in later times, an increase was also added. Through the alterations of Solon, the Attic money, which before stood to the Æginetan in the relation of 5:6, had to the same the relation of 3:5. The new was related to the ancient Attic money as 18:25. Compared with the heavy Æginetan drachma . . . , the Attic was called the light drachma. . . . The former was equivalent to ten Attic oboli; so that the Æginetan talent weighed more than 10,000 Attic drachmas. It was equal to the Babylonian talent. Nevertheless the Æginetan money was soon coined so light that it was related to the Attic nearly as 3:2. . . . The Corinthian talent is to be estimated as originally equivalent to the Æginetan, but it was also in later times diminished. . . . The Egyptian talent . . . contained, according to Varro in Pliny, eighty Roman pounds, and cannot, therefore, have been essentially different from the Attic talent, since the Attic mina is related to the Roman pound as 4:3. . . . The Euboic talent is related . . . to the Æginetan as five to six, and is no other than the money-talent of the Athenians in use before the time of Solon, and which continued in use as commercial weight. According to the most accurate valuation, therefore, one hundred Euboic drachmas are equivalent to 138⅔ drachmas of Solon. . . . Appian has given the relation of the Alexandrian to the Euboic talent in round numbers as 6 to 7 = 120 to 140; but it was rather more accurately as 120 to 138⅔. . . . So much gold . . . as was estimated to be equivalent to a talent of silver, was undoubtedly also called a talent of gold. And, finally, a weight of gold of 6,000 drachmas, the value of which, compared with silver, always depended upon the existing relation between them, was sometimes thus called." — A. Boeckh, *Public Economy of Athens* (*tr. by Lamb*), *bk.* 1, *ch.* 4–5. — See, also, SHEKEL.

TALLAGE, The. — "Under the general head of donum, auxilium, and the like, came a long series of imposts [in the period of the Norman kings], which were theoretically gifts of the nation to the king, and the amount of which was determined by the itinerant justices after separate negotiation with the payers. The most important of these, that which fell upon the towns and demesne lands of the Crown, is known as the tallage. This must have affected other property besides land, but the particular method in which it was to be collected was determined by the community on which it fell, or by special arrangement with the justices." — W. Stubbs, *Const. Hist. of Eng., ch.* 13, *sect.* 161 (*v.* 1).

TALMUD, The. — "The Talmud [from a Hebrew verb signifying 'to learn'] is a vast irregular repertory of Rabbinical reflections, discussions, and animadversions on a myriad of

topics treated of or touched on in Holy Writ; a treasury, in chaotic arrangement, of Jewish lore, scientific, legal, and legendary; a great storehouse of extra-biblical, yet biblically referable, Jewish speculation, fancy, and faith. . . . The Talmud proper is throughout of a twofold character, and consists of two divisions, severally called the Mishna and the Gemara. . . . The Mishna, in this connection, may be regarded as the text of the Talmud itself, and the Gemara as a sort of commentary. . . . The Gemara regularly follows the Mishna, and annotates upon it sentence by sentence. . . . There are two Talmuds, the Yerushalmi [Jerusalem], or, more correctly, the Palestinian, and the Babli, that is, the Babylonian. The Mishna is pretty nearly the same in both these, but the Gemaras are different. The Talmud Yerushalmi gives the traditional sayings of the Palestinian Rabbis, . . . the 'Gemara of the Children of the West,' as it is styled; whereas the Talmud Babli gives the traditional sayings of the Rabbis of Babylon. This Talmud is about four times the size of the Jerusalem one; it is by far the more popular, and to it almost exclusively our remarks relate." —P. I. Hershon, *Talmudic Miscellany, introd.*— The date of the compilation of the Babylonian Talmud is fixed at about A. D. 500; that of Jerusalem was a century or more earlier. See, also, MISCHNA.

TALUKDARS.—"A Taluka [in India] is a large estate, consisting of many villages, or, as they would be called in English, parishes. These villages had originally separate proprietors, who paid their revenue direct to the Government treasury. The Native Government in former times made over by patent, to a person called Talukdar, its right over these villages, holding him responsible for the whole revenue. . . . The wealth and influence thus acquired by the Talukdar often made him, in fact, independent. . . . When the country came under British rule, engagements for payment of the Government Revenue were taken from these Talukdars, and they were called Zamindars."—Sir R. Temple, *James Thomason, p.* 158.—See INDIA: A. D. 1785-1793.

TAMMANY RING, The. See NEW YORK: A. D. 1863-1871.

TAMMANY SOCIETY.—TAMMANY HALL.—"Shortly after the peace of 1783, a society was formed in the city of New York, known by the name of the Tammany Society. It was probably originally instituted with a view of organizing an association antagonist to the Cincinnati Society. That society was said to be monarchical or rather aristocratical in its tendency, and, when first formed, and before its constitution was amended, on the suggestion of General Washington and other original members, it certainly did tend to the establishment of an hereditary order, something like an order of nobility. The Tammany Society originally seems to have had in view the preservation of our democratic institutions. . . . 'Tammany Society, or Columbian Order, was founded by William Mooney, an upholsterer residing in the city of New York, some time in the administration of President Washington. . . . William Mooney was one of those who, at that early day, regarded the powers of the general government as dangerous to the independence of the state governments, and to the common liberties of the people. His object was to fill the country with institutions designed, and men determined, to preserve the just balance of power. His purpose was patriotic and purely republican. . . . Tammany was, at first, so popular, that most persons of merit became members; and so numerous were they that its anniversary [May 12] was regarded as a holiday. At that time there was no party politics mixed up in its proceedings. But when President Washington, in the latter part of his administration, rebuked "self created societies," from an apprehension that their ultimate tendency would be hostile to the public tranquility, the members of Tammany supposed their institution to be included in the reproof; and they almost forsook it. The founder, William Mooney, and a few others, continued steadfast. At one anniversary they were reduced so low that but three persons attended its festival. From this time it became a political institution, and took ground with Thomas Jefferson.' "—J. D. Hammond, *History of Political Parties in the State of New York, v.* 1, *ch.* 18.—"The ideal patrons of the society were Columbus and Tammany, the last a legendary Indian chief, once lord, it was said, of the island of Manhattan, and now adopted as the patron saint of America. The association was divided into thirteen tribes, each tribe typifying a state, presided over by a sachem. There were also the honorary posts of warrior and hunter, and the council of sachems had at their head a grand sachem, a type evidently of the President of the United States."—R. Hildreth, *Hist. of the U. S., v.* 4, *ch.* 3.—"Shortly after Washington's inauguration, May 12, 1789, the 'Tammany Society or Columbian Order' was founded. It was composed at first of the moderate men of both political parties, and seems not to have been recognized as a party institution until the time of Jefferson as President. William Mooney was the first Grand Sachem; his successor in 1790 was William Pitt Smith, and in 1791 Josiah Ogden Hoffman received the honor. John Pintard was the first Sagamore. De Witt Clinton was scribe of the council in 1791. It was strictly a national society, based on the principles of patriotism, and had for its object the perpetuation of a true love for our own country. Aboriginal forms and ceremonies were adopted in its incorporation."—Mrs. M. J. Lamb, *Hist. of the City of N. Y., v.* 2, *p.* 362, *foot-note.*—"One must distinguish between the 'Tammany Society or Columbian Order' and the political organization called for shortness 'Tammany Hall.' . . . The Tammany Society owns a large building on Fourteenth Street, near Third Avenue, and it leases rooms in this building to the 'Democratic Republican General Committee of the City of New York,' otherwise and more commonly known as 'Tammany Hall' or 'Tammany.' Tammany Hall means, therefore, first, the building on Fourteenth Street where the 'Democracy' have their headquarters; and secondly, the political body officially known as the Democratic Republican General Committee of the City of New York.

. . . The city of New York is divided by law into thirty 'assembly districts;' that is, thirty districts, each of which elects an assemblyman to the state legislature. In each of these assembly districts there is held annually an election of members of the aforesaid Democratic Republican General Committee. This committee is a very large one, consisting of no less than five thousand men; and each assembly district is allotted a certain number of members, based on the number of Democratic votes which it cast in the last preceding presidential election. Thus the number of the General Committeemen elected in each assembly district varies from sixty to two hundred and seventy. There is intended to be one General Committeeman for every fifty Democratic electors in the district. In each assembly district there is also elected a district leader, the head of Tammany Hall for that district. He is always a member of the General Committee, and these thirty men, one leader from each assembly district, form the executive committee of Tammany Hall. 'By this committee,' says a Tammany official, 'all the internal affairs of the organization are directed, its candidates for offices are selected, and the plans for every campaign are matured.' The General Committee meets every month, five hundred members constituting a quorum; and in October of each year it sits as a county convention, to nominate candidates for the ensuing election. There is also a sub-committee on organization, containing one thousand members, which meets once a month. This committee takes charge of the conduct of elections. There is, besides, a finance committee, appointed by the chairman of the General Committee, and there are several minor committees, unnecessary to mention. The chairman of the finance committee is at present Mr. Richard Croker. Such are the general committees of Tammany Hall. . . . Each assembly district is divided by law into numerous election districts, or, as they are called in some cities, voting precincts,— each election district containing about four hundred voters. The election districts are looked after as follows: Every assembly district has a district committee, composed of the members of the General Committee elected from that district, and of certain additional members chosen for the purpose. The district committee appoints in each of the election districts included in that particular assembly district a captain. This man is the local boss. He has from ten to twenty-five aids, and he is responsible for the vote of his election district. There are about eleven hundred election districts in New York, and consequently there are about eleven hundred captains, or local bosses, each one being responsible to the (assembly) district committee by which he was appointed. Every captain is held to a strict account. If the Tammany vote in his election district falls off without due cause, he is forthwith removed, and another appointed in his place. Usually, the captain is an actual resident in his district; but occasionally, being selected from a distant part of the city, he acquires a fictitious residence in the district. Very frequently the captain is a liquor dealer, who has a clientele of customers, dependents, and hangers-on, whom he 'swings,' or controls. He is paid, of course, for his services; he has some money to distribute, and a little patronage, such as places in the street-cleaning department, or perhaps a minor clerkship. The captain of a district has a personal acquaintance with all its voters; and on the eve of an election he is able to tell how every man in his district is going to vote. He makes his report; and from the eleven hundred reports of the election district captains the Tammany leaders can predict with accuracy what will be the vote of the city."—H. C. Merwin, *Tammany Hall* (*Atlantic, Feb.*, 1894).
